Forslag til vedtak:

Fakultet for samfunnsvitenskap støtter videreføring av CIEM som prioritert forskningssenter for en ny periode på tre år.

Leif Skiftenes Flak

Hva saken gjelder

CIEM, Centre for Integrated Emergency Management, ble etablert som forskningssenter ved Universitetet i Agder i 2011. Senteret forsker på hvordan teknologibasert innovasjon kan bidra til økt samfunnssikkerhet og resiliens.

I 2014 ble CIEM etablert som toppsatsingsområde av Universitetsstyret, (S-sak 41/14) og fikk tildelt strategiske midler i to perioder frem til 2020. I november 2021 ble senteret på nytt oppnevnt som prioritert forskningssenter (PRIFORSK) ved UiA (S-sak 156/21).

Et hovedmål med PRIFORSK-ordningen er å stimulere og utvikle sterke forskningsmiljøer til å kunne utvikle sterke og nasjonalt og internasjonalt anerkjente forskningsmiljø med solid gjennomslag i de større, konkurransebaserte arenaene for forskningsfinansiering.

Ordningen innebærer at senteret får en fast tildeling av strategiske midler i fem år. Etter fem år skal senteret evalueres, og universitetsstyret vil etter evaluering vurdere om senteret skal få videreført status som prioritert forskningssenter i en ny periode på tre år.

Forlengelse forutsetter at det vurderes som sannsynlig at senteret vil nå sine målsettinger og innfri universitetsstyrets forventninger innenfor den nye perioden, samt at involverte fakultet(er) støtter en slik videreføring. CIEM er i dialog med ulike fagmiljøer ved Fakultet for teknologi og realfag og ved Handelshøyskolen, som per i dag også er involvert i senteret. En videre aktiv involvering som innebærer forpliktelser fra andre fagmiljøer, vil kunne øke ambisjonsnivået for senteret ytterligere.

Som vertsfakultet for PRIFORSK-senteret blir fakultetsstyret bedt om å ta stilling til evalueringsmaterialet og behandle spørsmålet om man ønsker/ikke ønsker å støtte forlenget finansieringsperiode for senteret.

Saksunderlag Om CIEM

CIEM er et tverrfakultært senter, som omfatter Fakultet for samfunnsvitenskap og Fakultet for teknologi og realfag (TEKREAL) og Handelshøyskolen (HH). Organisatorisk er senteret fra og med 2017 plassert på Fakultet for samfunnsvitenskap ettersom senterets ledelse siden da er ansatt der.

CIEM har fra oppstarten i 2011 utviklet seg til å bli et nasjonalt ledende forskningsmiljø innen sitt felt, som er teknologistøtte for samfunnssikkerhet og beredskap. Senteret er også anerkjent internasjonalt.

CIEMs mål er å bidra til samfunnssikkerhet og resiliens, ved å utvikle og tilpasse nye teknologiske løsninger og metoder for beredskapsaktører. Senteret samler forskere innen teknologi og samfunnsvitenskap som sammen undersøker hvordan man effektivt kan integrere informasjon fra forskjellige kilder for å støtte beslutningstaking ved håndtering av ulike typer kriser og humanitære operasjoner. Videre fokuserer senteret på hvordan organisasjoner kan forebygge og håndtere digitale trusler og cyberangrep.

Evalueringens mål og prosess

Evalueringen av CIEM startet allerede høsten 2025 og følgende hovedelementer i den interne prosessen ble trukket frem:

i) oppnåelse av senterets egne ambisjoner, målsettinger og indikator mål, ii) oppnåelse av universitetsstyrets forventninger til resultater fra senteret, og iii) senterets planer og strategi for videre utvikling.

Som en del av evalueringen leverte CIEM en egevaluering og senteret mottok to evalueringsrapporter fra eksterne eksperter i juli 2026.

Evalueringen skal gi UiA-styret et beslutningsgrunnlag for mulig forlengelse av CIEM som et prioritert forskningssenter med tilhørende strategisk støtte fra UiA sentralt, samt gi råd og anbefalinger til senteret når det gjelder videre utvikling.

I etterkant av den eksterne evalueringen har det blitt organisert møte med CIEMs styringsgruppe bestående av instituttledere og dekaner fra involverte fagmiljøer for å drøfte evalueringen og for å få innspill til senterets fremtidige planer.

Beløpet for støtte fastsettes av universitetsstyret, men har de siste årene ligget på 2,25 millioner per år. Det er et vilkår at fakultetet gir tilsvarende tildeling.

CIEMs egevaluering

Senteret ble bedt om å levere egevaluering etter tilsendt mal. I tillegg ble senteret bedt om å legge ved samtlige evalueringer av innsendte prosjektsøknader gjennomført i PRIFORSK-perioden (fra 2021 – d.d.). Senteret har levert en evaluering etter malens oppsett med følgende inndeling:

1. Introduksjon
2. Selv-evaluering
3. Organisering

4. Vitenskapelig kvalitet og samfunnsnytte
5. Eksternfinansiering
6. Strategi og videre planer.

Senteret har kort beskrevet historien til forskningssenteret før det gjøres rede for resultater i PRIFORSK-perioden opp mot de opprinnelige planene senteret fikk tilslag på ved opprettelsen i 2021. Senteret har i all hovedsak oppfylt de mål senteret hadde satt seg for perioden hva angår antall publiseringer, søknadsutvikling, konferanserelaterte KPIer, antall ph.d.-kandidater, antall masterstudenter, og involvering av CIEM på eksterne samarbeidsarenaer og i medieoppslag.

I tråd med forventningene for PRIFORSK-sentrene oppnådde CIEM sitt hovedmål om å sende inn søknad om Senter for Forskningsdrevet Innovasjon (SFI). SFI-søknaden gikk videre fra runde 1, og var en av 30 søknader som gikk videre i sterk konkurranse med 96 andre initiativ, men nådde dessverre ikke helt opp. Denne søknaden innebar en større innsats for senteret, med mange positive ringvirkninger i form av nye samarbeidsrelasjoner, økt industri-tilknytning, og intern kapasitetsbygging for større søknadsinitiativ av denne størrelse.

Senteret redegjør videre for organiseringen av CIEM, den vitenskapelig kvalitet og ekstern finansiering.

CIEMs fremtidige planer og strategi er fremhevet i rapportens siste del. Senteret omtaler følgende overordnende planer for de tre neste årene:

- CIEM ønsker å ta en ledende rolle i etablering av en nasjonal forskningsinfrastruktur for teknologistøttet krisehåndtering med Samvirkerommet som en sentral hub.
- Samvirkerommet blir den naturlige arenaen for regionale aktører å benytte for trening/«best-practice» i øvelsessammenheng.
- Utforske muligheten for å koordinere årlig fullskala beredskapsøvelse for relevante nødetater tentativt titulert «Øvelse Sør» etter modell fra tilsvarende øvelse i regi av Nord Universitet (Øvelse Nord).
- Utnytte den økende forskningsfinansieringen innenfor tematikken i forskningssenteret med mål om å øke eksternfinansieringen.
- Lede eller delta i søknad for den nye senterordningen fra Forskningsrådet: Senter for beredskap, forsvarsevne og sikkerhet.
- To nye ph.d.-kandidater på cybersikkerhet, og KI og klimatilpasning.
- Styrke koblingen til samarbeidspartnere, inkludert sivil-militært samarbeid.
- Utvikle planer for relevante utdanningstilbud innenfor CIEMs tematikk.

Oppsummering av de eksterne evalueringene

De to eksterne evaluatorene avla to separate evalueringer. De er professor i informasjonssystemer John Sören Pettersson ved Universitetet i Karlstad, og Dr. Peter Sheard i konsultantselskapet Trend 2000. Hovedkonklusjonen fra de to evalueringene er at CIEM har hatt en sterk utvikling og er i en god posisjon for å nå den strategiske målsetningen med PRIFORSK-ordningen i en ny periode. Begge rapporter trekker frem den økte relevansen tematikken senteret forsker på har i en ustabil verden.

Etter mal fra UiA er oppbygningen i de to evalueringsrapportene noe ulik hvor Sheards rapport har følgende oppbygning: «1. Overall assessment», «2. External funding» og «3. Future potential», og Petterssons rapport følger inndelingen: «1. Organization», «2. Scientific

excellence and impact», «3. External funding», «4. Strategy and plans for further development» og «5. Overall assessment and future potential».

Sheards rapport

Sheard trekker frem at CIEM er et veletablert interdisiplinært forskningssenter, som har utviklet seg til å bli et modent senter med sterk europeisk orientering, svært gode nettverk, og økende suksess hva angår eksternfinansierte prosjekter. Utover positiv utvikling og sterke resultater hva angår publisering og eksternfinansiering påpeker Sheard at økt internasjonal representasjon i CIEM kan styrke senterets ambisjoner om et mer internasjonalt nedslagsfelt. Sheard nevner videre at suksessraten på eksternfinansiering samlet er over hva som kan forventes, men at senteret i mindre grad lykkes med søknader de koordinerer. Noe som kan tyde på behov for økt kapasitetsbygging for å lykkes bedre med å ta en ledende rolle i søknadsutvikling. Sheard har i sin rapport vurdert CIEMs utsikter for å oppnå status som Senter for fremragende forskning (SFF) og Senter for forskningsdrevet innovasjon (SFI). CIEMs styrker innenfor interdisiplinær og praksisnær forskning treffer denne ordningen svært godt, og at det kan forventes at senteret vil være konkurransedyktige her. Sheard viser til at CIEM fortsatt utvikler seg, men at senteret per i dag mangler en del på å kunne konkurrere om å bli et SFF.

Petterssons rapport

Pettersson trekker frem den vitenskapelige kvaliteten og at antall publiseringer er imponerende. PRIFORSK-midlene har muliggjort økt kvalitet og samfunnsnytte. Videre trekkes suksessrate på rundt en tredjedel av eksterne søknader frem som positivt, og at CIEM selv reflekterer godt om mulige årsaker for mangel på tilslag. Pettersson vurderer senterets videre strategiske planer som velutviklete og relevante for å kunne bidra til forskningsfronten. Han poengterer at senteret har konkretisert planer for den nye senterutlysningen i Forskningsrådet for: Senter for beredskap, forsvarsevne og sikkerhet. Pettersson mener at senteret er fornuftig organisert og at Samvirkerommet ser ut til å ha gitt positive effekter med videre potensial som en attraktiv arena for eksternt samarbeid.

Pettersson ser potensial for å koble på andre disipliner for å bedre kjønnsbalansen ytterligere.

Fageksperten Pettersson trekker frem dette mot slutten av rapporten:

«(...)CIEM is now firmly established in the international “crisis management” arena and its plans to engage with key international players to enhance its global impact are realistic. The centre's future potential is thus very good».

Forøvrig vises det til vedleggene for fullstendig evalueringsrapport, CIEMs egenevaluering og tilsvar.

Kort om finansielle forpliktelser

Det opprinnelige CIEM PRIFORSK-budsjettet inkluderte to ph.d. stillinger strategisk tildelt av UiA-styret, samt tre ph.d. stillinger som ble brukt som egeninnsats fra fakultetene (to SV og en TEKREAL). CIEM har fått utdelt alle ressursene til stipendiatstillinger i PRIFORSK. CIEM budsjettet dekker to post.doc. stillinger på tre år hver. Den ene har finansiert en post.doc ved FSV i tre år fra 2022-2025, og den siste stillingen delfinansierer tre post.doc stillinger, der to andeler er tildelt fakultet for samfunnsvitenskap og en er tildelt TEKREAL. CIEM dekker i tillegg to professor-II stillinger i 20% stilling i fem år.

Fakultetet dekker pr. i dag senterleder i 50% stilling. Senterleders institutt kompenseres for hennes bidrag. I tillegg bidrar to institutt med en 10% stilling hver som egeninnsats.

Fakultetsadministrasjonen dekker en administrativ leder i 50%, i tillegg til andre ressurspersoner i administrasjonen med en samlet ytelse på ca. 5%.

Samlet betyr det at fakultetet i året dekker ca. 2 millioner i egeninnsats for å drifte senteret. (ca. 2 i 2026, 2,2 i 2029)

Oppsummering

Styrets strategiske tildeling til CIEM har ført til en meget god utvikling for senteret. De eksterne evaluatorene er samstemte i sin konklusjon med at CIEM har levert forskning på høyt nivå og med høy relevans, og at senteret bør fortsette sin virksomhet. Planene presentert i egevalueringen for CIEMs videre arbeid anses som relevante og tilstrekkelige for å nå PRIFORSK-ordningen strategiske mål om å konkurrere på det øverste nivået. Dette samsvarer også godt med fakultetets strategi for forskning av høy kvalitet, og tilhørende handlingsplaner.

Dekanens vurdering

Dekan ved fakultet for samfunnsvitenskap vurderer en videreføring av senteret som positivt for fakultetet, UiA samt regional og nasjonal utvikling innen totalberedskap. Både egevalueringen og de eksterne evalueringene viser at senteret har hatt en svært positiv utvikling og holder nå høy kvalitet. CIEM har blitt en motor ved fakultetet med tanke på å tiltrekke seg ekstern finansiering og har opparbeidet erfaring med store sentersøknader. Tematisk treffer CIEM godt i forhold til store samfunnsutfordringer og det forventes betydelige forskningsmidler på tematikk som CIEM vil være godt posisjonert til å søke på i tiden fremover. Ledergruppen på fakultetet er positiv til videreføring, og fakultetet anbefaler derfor videreføring av finansiering som prioritert forskningssenter i tre nye år.

CIEM PRIFORSK SELF-EVALUATION REPORT

1. Introduction

The Centre for Integrated Emergency Management (CIEM) is hosted by the Faculty of Social Sciences at the University of Agder. CIEM was established in 2011 by Prof. Jose Gonzalez at the Faculty of Engineering and Science, aiming at contributing to the research area in crisis management field, with active use of the technology support. His vision was that by joining the forces of top researchers in ICT, information systems and social sciences, we could form a research centre conducting groundbreaking interdisciplinary research on technology support for emergency preparedness and management. The development in wireless technology, mobile computing, social networking and data analytics was considered the basis for a paradigm shift in emergency preparedness and response, with novel possibilities for community involvement, real-time data acquisition for situational awareness, and context-dependent crisis response.

In 2011, the centre was designated as the first cross-faculty focus area at UiA and received strategic funding for basic operations over a period of four years. The centre conducts research on how technology innovation can improve emergency preparedness and management. Bringing together researchers within information systems, computer science and social science, the centre explores how to effectively collect and integrate information from different sources to support decision-making in different stages of an emergency. CIEM's aim is to contribute to societal resilience, by providing emergency stakeholders with improved technology and method support for secure and efficient operations.

In 2014, CIEM was appointed as a top priority research area at University of Agder for four years with continued annual strategic funding. In 2017, the management of CIEM was transferred to the Faculty of Social Sciences, and the centre was awarded a continued funding for three more years as a top priority research area following an external evaluation of the centre's achievements. In this period, the multidisciplinary scope of CIEM was extended further to include more researchers from the Department of Engineering Sciences, the Department of Innovation and Management, and the Department of Global Planning and Development.

In 2021 CIEM applied for and was awarded status a Priority Research Centre (PRIFORSK) for the period of 2022-2026. This new status came with funding of more than 20 million NOK over a period of five years (or 4 million per year), with additional funding support for four PhD students. Currently, CIEM involves 13 professors, 2 Professor IIs, 13 Associate Professors and 19 active PhDs and PostDoc researchers.

2. Self-Evaluation

2.1 Original Ambitions and Overall Status

The overall ambition of CIEM laid down in the PRIFORSK proposal is to become an internationally leading centre conducting groundbreaking research on how innovations in information and communication technologies, methods and applications can strengthen societal resilience and mitigate complex challenges arising from natural and man-made hazards. CIEM seeks to further consolidate its position as an excellent research centre, by advancing interdisciplinary research of high quality and relevance. This report provides a comprehensive overview of the centre's activities during the period from 2022 to April 2026. It outlines CIEM's organizational structure, highlights its scientific contributions to advance the research frontier, proposals submitted, and granted external funding, and the centre's strategy and plans for future development.

2.2 Scientific Publications and Disseminations: Original KPIs and Achievement

The achievements on scientific publications can be seen in Table 1. As a baseline, in the period from 2012-2020 (8 years), the CIEM researchers have published a total of 391 peer-reviewed articles, in the following categories: 164 journal articles, 188 articles in conference proceedings, 32 book chapters, 3 books and 4 PhD theses. CIEM aimed at significantly advancing the publication outputs during the PRIFORSK period.

For the PRIFORSK period (2022–2026), CIEM has set clear publication and academic engagement targets to strengthen its research profile and international visibility. The centre aimed to produce a total of 350 publications, including 115 Level 2 publications, demonstrating a strong emphasis on high-quality scholarly output. In addition, CIEM planned to edit 5 journal special issues, chair 10 conference tracks, and took an active role in the research community by hosting 2 international conferences as well as 5 national conferences

and workshops. These targets reflected an ambition not only to generate research, but also to shape academic dialogue and build strong national and international research networks.

Table 1 Scientific Publications and Disseminations

Key performance Indicators (KPI)	KPI targets 2022-2026	Achievement 2022-April 2026
Total number of publications	350	389 ¹⁾
Level 2 publications	115	55 ¹⁾
Journal special issues edited	5	10 ²⁾
Chairing of conference tracks	10	23 ³⁾
Hosting international conferences	2	8 ⁴⁾
Hosting national conferences and workshops	5	7 ⁵⁾

In the PRIFORSK implementation, Table 1 shows a significant increase in many KPI targets.

¹⁾ *The scientific publication achievements 2022-2026:* As of April 2026, the CIEM PRIFORSK researchers have produced a total of 389 peer-reviewed publications. When it comes to the number of level 2 publications, we are below the estimated level, which is largely due to the fact that the most relevant journals within technology-supported crisis management are at level 1. CIEMs researchers have been successful in pursuing high quality well-recognised international journals, even if the lack of outlets suitable at level 2 is a challenge, however our total output is stronger than expected from the PRIFORSK's targets. We will continue prioritising publication in well-recognised international journals. The total number of publications from 2026 is not yet visible, but the publications so far exceed the KPI target. The PRIFORSK funding has enabled our researchers to increase their outputs and gradually shift their publishing toward higher quality journals and enhanced our possibilities to engage in international scientific networks. The outputs registered during this four-year period, exceed the publications produced between 2012 and 2020, which spans eight years.

²⁾ CIEM has edited five journal special issues, in International Journal of Disaster Risk Reduction (IJDRR), Journal of Humanitarian Logistics and Supply Chain Management (JHLSCM), Technology Management Journal, Journal of the Association for Information Systems, editorial review board (special issue-2025), and European Journal on Information Systems, editor (special issue-2023). CIEM members also have edited 5 Springer Proceedings of the Information Technology for Disaster Risk Reduction (ITDRR) conferences between 2022-2025, the last one will be implemented after the next 2026 ITDRR conference, and an editor for the 2023 Information Systems for Crisis Response and Management (ISCRAM) Proceedings.

^{3) 4)} It is difficult to draw a straight line on assessing the activity on chairing conference tracks and hosting international conferences, as CIEM is involved in both hosting, and taking role as co-program chairs in some conference venues. Moreover, in practice, there are different levels of engagement for the conferences, ranging from track-co-chair, associate editor (AE), board members, program chairs, and conference chair. The overview of CIEM activities can be seen in Table 2

Table 2 Chairing conference tracks and international conferences

Year	Activities
2022	Conference Chair, INTAP- The International Conference on Intelligent Technologies and Applications (Grimstad). Track Chair, ISCRAM (Tarbes, France); ISCRAM Board Member . AE in ICIS (Cybersecurity, Privacy and Ethics of AI track). Workshop Chair, IFIP 8.2 OASIS ; PC Member
2023	Conference Co-Chair, ISCRAM (Omaha, USA); ISCRAM Board Member . Program Chair, ITDRR (Tokyo, Japan). Organizing three track Chairs, and one workshop in ISCRAM (Omaha, USA) Organizing a workshop on cybersecurity and privacy at ECIS (Kristiansand/UiA) PC Member, DESRIST Human Safety and Cybersecurity track, Track Chair, Risk, Security, and Resilience, ISD Program committee member. The Annual Symposium of Computer Science (Tietojenkäsittelytieteen päivät); AE, ICIS , Security and Privacy track, Associate Editor. Track Chair, IEEE Global Communications Conference (Globecom), Kuala Lumpur, Malaysia
2024	Program Chair, ITDRR 2024 (Krems, Austria). Track Chair, ISCRAM 2024 (Münster, Germany); ISCRAM Board Member . Track Chair, IFAC Conference 2024 (Trondheim). AE, Digital Transformation Track; ECIS . PC, The Symposium of Computer Science (Tietojenkäsittelytieteen päivät) Organizing a SGISEC workshop on cybersecurity and privacy at ECIS (Cyprus)
2025	Program Chair, ITDRR (Kyoto, Japan). Track Chair, ISCRAM (Halifax, Canada); ISCRAM Board Member . Mini track chair DIRECT (Disaster Information, Resilience, for Emergency and Crisis Technologies), HICSS (USA); Track Chair, AMCIS (USA). Track Chair, on cybersecurity and privacy at ECIS (Jordan)

	Program committee member. The Annual Symposium of Computer Science (Tietojenkäsittelytieteen päivät);
2026	Workshop Chair, SIGSEC Cybersecurity, Privacy, and Infrastructures ; AE, SIGSEG-WISP. Mini track chair DIRECT (Disaster Information, Resilience, for Emergency and Crisis Technologies), HICSS (USA); AE, ICIS Security Privacy Track Track Chair on cybersecurity and privacy at ECIS (Italy) Program Chair, ITDRR (Greece); CIEM selected to be a chair for IFIP 5.15 Working Group AE, Research Methods, Theories, and Philosophy, ICIS Track chairs for two tracks in ISCRAM ; ISCRAM Board Member ;

While the conference tracks organized were 23, in total, CIEM staff held 34 academic leadership and service roles during the period in relevant conference venues, demonstrating strong international engagement and visibility in the research community. These included 11 track chairs, and mini-track roles, 5 program chair roles, 5 associate editors, and ISCRAM Board Member affiliation the last 5 years. In addition, CIEM contributed through 4 workshop chair roles, 3 program co-chairs, and 2 conference chairs or co-chair roles in various venues. Typical tracks organized by CIEM are universal design for ICT for emergency management, cybersecurity, gender and crisis management. Our researchers have been also contributed to the ISCRAM workshops such as “Techno-ethics Perspective for UAV-Assisted Data Collection” (Halifax, Canada, 2025); “Devising Assessment and Mitigation of Systemic Risks with Strategy Mapping” and “Using Bomb Shelter in the 21st Century?” (Münster, Germany, 2024); “Information Trading Zones” (Omaha, USA, 2023); “Social Media Listening” (Tarbes, France 2022).

⁵⁾ Most workshops involved national and regional actors, although they were not formally designated as “national workshops.” Instead, these activities were embedded in a series of workshops and preparatory efforts related to the development of the major centre proposal: SFI SERENE (further elaborated in section 4), between 2023-2024. This included two workshops in 2023 focused on recruitment with industry and public-sector partners in the e-health and cybersecurity domains, and four workshops in 2024: one recruitment workshop, one workshop in Stage 1, and two workshops in Stage 2 with an average of 20-30 stakeholders participating in all workshops.

2.3 Proposal Development and Project Acquisition: Original KPIs and Achievement

Prior to the PRIFORSK funding, CIEM has led and contributed to a broad portfolio of research and innovation projects between 2017-2021, with funding from both from EU and Research Council of Norway (RCN). During this period, CIEM acted as coordinator in six projects and partner in three. Major projects include “Airbonnet—autonomous airborne networks” (2020-2026), and “Social media analytics” (2019-2024), and were carried into the PRIFORSK period, due to project extensions.

For the period 2022–2026, CIEM defined ambitious KPI targets to further strengthen its research funding and project development activities. The centre aimed to submit 8 EU applications, with a goal of securing funding for 3 of these EU proposals. In addition, CIEM planned to submit 20 applications to other international and national funding sources, with an expected 10 funded project proposals. The targets also included the submission of 1 SFI application (See Table 3).

Table 3 Proposal Development

Key performance Indicators (KPI)	Initial Targets 2022-2026	Achievement 2022-April 2026
EU application submitted	8	8
Granted EU proposals	3	2
Application submitted to other international and national funding sources	20	30
Funded project proposals	10	10
SFI/SFF application submitted	1	3*)

From 2022 to April 2026, CIEM showed strong performance in research funding activities. During this period, the centre submitted 8 EU applications, of which 2 were granted, while also submitting 22 applications to other international and national funding sources. In total, 30 project proposals were submitted and 10 proposals were funded. Note on Research-based Innovation scheme (SFI): In the PRIFORSK plan, CIEM aimed at developing an application for the SFI. This funding scheme supports long-term research conducted in close collaboration between research-performing companies and prominent research centres. The SFI centres are to enhance technology transfer, internationalization and researcher training, and the scientific merit of the research must be of high international calibre. The CIEM SFI application was developed based on the multidisciplinary expertise in the centre for addressing technology-based innovation for large-scale and complex disaster events. The application was expected to further capitalise on CIEM’s network with emergency management stakeholders in public sector and industry. This has been CIEM’s primary target for funding acquisition and in line with the main goal of the PRIFORSK scheme, to develop research environments competitive for centre scheme funding at the highest level.

*) CIEM submitted SFI SERENE to both stages of the SFI-scheme, both requiring major proposal development effort, demonstrating a strong and proactive effort to secure long-term strategic funding. The SFI SERENE proposal, valued at more than 150 MNOK and coordinated by CIEM, was among 30 out of 96 proposals that advanced to the second submission stage, reflecting CIEM's ambition to position itself for substantial, long-term research investments. Although the proposal was ultimately not selected for funding (only eight proposals were awarded), the process clearly demonstrated CIEM's ability to mobilize significant support from industry and public-sector partners. To meet the prerequisites for submission, CIEM secured commitments exceeding 50MNOK from external stakeholders—funding that would have been contributed by these partners if the proposal was selected. Moreover, CIEM is involved in a **first-stage SFF** application called COURAGE to be announced May 2026, as a partner. See also Section 5 for further details on proposal development and external funding acquisition.

2.4 Education Activities: Original KPIs and Achievement

Prior to the PRIFORSK period, CIEM was still in an early development phase when it comes to the education (master cybersecurity, established 2019) with limited completed educational results linked to its activities. At that point, the centre had 4 graduated PhD candidates and had not yet recruited any PhD candidates from industry or the public sector. There were 25 graduated MSc candidates in cybersecurity, but no further education (EVU) courses established. This baseline illustrates the starting point from which CIEM set out to build its educational capacity, strengthen research training, and expand its contribution to higher education and professional development (See Table 4).

For the period 2022–2026s, CIEM has set initial goals for education, competence building, and research training. The centre aimed to graduate 16 PhD candidates, including the recruitment of 5 PhD candidates from industry and the public sector, highlighting its commitment to strengthening collaboration between academia and practice. In addition, CIEM planned to educate 150 MSc candidates in cybersecurity, helping to build much-needed expertise in a critical field. The centre also aimed to deliver 2 further education courses (EVU), reflecting a strong focus on lifelong learning and the continued development of professional competence.

Table 4 Education Activities

Key performance Indicators (KPI)	Initial situation 2021	Initial Targets 2022-2026	Achievement 2022-April 2026
Graduated PhD candidates	4	16	(21 PhDs, 9 graduated)
Recruited industry/public sector PhD candidates	0	5	2
Graduated MSc candidates in cybersecurity	25	150	161*)
Graduated master candidates in global Development, Crisis and Change	0	0	42
Number of further education courses (EVU) (2 courses run 4 times each)	0	8	8

Achievements between 2022 to April 2026 (Table 4): CIEM accomplished strong results in education and competence building. During this period, CIEM has 21 PhDs with 9 graduated PhD candidates and 12 PhDs in the completion process, expected to submit their thesis in Autumn 2026, and 2027. These 9 graduated students included one thesis that is recently approved for defence 10th of June. These PhDs included 2 candidates recruited from industry and the public sector (See Section 3 for further information on CIEM PhDs). However not all are finished within 2026, as like other institutions, we faced challenges in recruiting suitable candidates for doctoral positions in technology and the natural sciences, where some positions needed to be advertised multiple times. Some PhDs started midway during PRIFORSK, some students have also additional tasks such as teaching and projects, requiring them to have extra time for completing their PhD thesis.

*) As of **Spring 2025**, **103** students had graduated from the master's programme in *Cybersecurity Management* and **27** from *Cybersecurity Technology*, totalling **130 graduates**. Since the programme has been split between the Department of Information Systems and the Department of Information and Communication Technology, the first cohort of the revised Cybersecurity Management programme (**31 students**) will graduate in Spring 2026, or in total **161** master cybersecurity students graduated by 2026. Thus, the KPI will be achieved, beyond the planned KPIs. **In the Fall of 2023**, the first admissions were made to a new master's program in Global Development, Crisis and Change at the Department of Global Development and Community Planning, which will strengthen the faculty's education in crisis management and the relevance for CIEM. In 2025, there were **17** master students graduated from the program. In this 2026, 25 students are registered for master thesis. Thus, in total, by 2026, there will be approximately **42** students graduated from this new master program.

Regarding EVU courses, two further education courses— IS-929 AI meets Cybersecurity: Fundamentals, and IS-926 “Collaboration, proactive staff practices and digital tools for crisis preparedness”—have been established in 2023. IS-929 and have been running twice in 2024 and [2026](#) (spring semesters). While the EVU “Collaboration, proactive staff practices and digital tools for crisis preparedness” has run in [Spring and Autumn](#) (2025) and is planned for [Spring and Autumn](#) (2026).

Beyond what have been promised in the KPI, CIEM actively offers CIEM topics for bachelor and master thesis in the Information Systems program, and there is increased interest among students to select CIEM-related topics. A new course IS-428-1 Technology-based Innovation for Societal Resilience has been offered for the information systems master students since 2023. Moreover, the IS-217 Universal Design of Information Systems course offered for Bachelor students has consistently included themes related to crisis management, and the course’s popular lecture on Universal Design of ICT for Emergency Management has also been provided several times as guest lecture in a Universal Design course at the University of Karlstad in Sweden. A new optional course for master cybersecurity: “Societal Security and Preparedness” was recently approved, has been inspired by the Total Preparedness national agenda that has become very important for CIEM research and teaching. CIEM has also developed a draft and concept on *possible new master program for societal security* by reusing as much possible as existing courses, which is projected to be hosted in the Department of IS. While it has not been possible to get it up and running this year, CIEM will further develop and continue pushing for establishing relevant education in this field.

2.5 Dissemination and Interaction with Practice: Original KPIs and Achievement

While CIEM since its establishment had gradually built a strong network of emergency management stakeholders, the PRIFORSK status has enabled extensive further strengthening of the centre’s dissemination and interaction with practice.

Table 5 Dissemination and Interaction with Practice

Key performance Indicators (KPI)	Initial Targets 2022-2026	Achievement 2022-2026
National and regional workshop and practice	5	5
Publications in practitioners’ fora and news media	10	30
Videos on research output distributed in social media channels	10	>10

For 2022–2026 targets, CIEM aimed to strengthen outreach and societal impact by organizing 5 national and regional workshops, publishing 10 practice- and media-oriented articles, and sharing 10 research-based videos through social media (Table 5). These targets reflect a clear ambition to make research visible, accessible, and relevant beyond academia.

From 2022 to 2026 (up until April), CIEM has fulfilled its outreach and dissemination goals by delivering 5 national and regional workshops and practice-oriented activities, publishing 30 articles for practitioners and news media, interview with NRK Radio and TV, and distributing more than 10 videos on research output through social media channels. The INSITU project led by CIEM was featured in four articles in the magazine Sikkerhet, published by The Norwegian Industrial Safety Organisation (NSO), in a special issue on Total Preparedness (No. 1/2023). In addition, the centre contributed opinion piece articles to national and regional newspapers (Aftenposten and Fædrelandsvennen), related respectively to the earthquake disaster in Turkey and the extreme weather event “Hans”. These results show a strong commitment to making CIEM’s research visible, accessible, and relevant to professional communities and the wider public. Further elaboration on communication and interaction with practice is described in Section 3.

CIEM annually arranges an event during Arendalsuka, which can be described as a week-long national “democracy festival” in the town of Arendal, bringing together politicians, public agencies, NGOs, universities, research institutions, companies, media and public for open debates, talks, stands, and networking on major societal issues. For instance, from 2022 to 2026, CIEM has annually organized and contributed to panel debates at Arendalsuka addressing key societal security and preparedness themes. In 2022, the debate focused on how new technology can contribute to a safer society, with participation from Kristiansand municipality, County governor (Statsforvalteren) in Agder, and CIEM. In 2023, CIEM contributed to discussions on innovation and technology in humanitarian aid with participants from Church’s Aid, Norad, SOS Children’s Villages Norway, and Pricewaterhouse Coopers (PwC), as well as a separate panel on cybersecurity organized by the Institute for Energy Technology, involving representatives from Ukraine and members of the Norwegian Parliament’s Committees on Justice and on Foreign Affairs and Defence. In 2024, the theme “Safer in an increasingly unstable world” brought together representatives from the Norwegian Mapping Authority, local municipalities, and a Member of Parliament, with CIEM collaborating on the event with the Centre for E-Health at UiA. In 2025, the debate addressed innovation for improved preparedness and

crisis management in an uncertain world, featuring senior participants from the Norwegian Mapping Authority, State Secretary of the Ministry of Justice, NORCE, the Oslo Police District, and CIEM. In 2026, CIEM plans two panel debates focusing respectively on future maritime emergency preparedness—addressing technology, collaboration, and security of supply—and on geodata, sharing, and innovation for improved preparedness, with participation from national authorities and other relevant actors expected.

2.6 Milestones

The CIEM PRIFORSK application defined a work plan with milestones for 2022–2026, aimed at a gradual further build-up of CIEM's research, innovation, and infrastructure capacity. Annual national research workshops were scheduled throughout the entire period, and applications to Horizon Europe and the Research Council of Norway were submitted regularly across all years. An SFI application was planned for 2023–2024, and two international conferences were scheduled during the period. From 2023 onward, CIEM also planned to offer further education courses (EVU) on a regular basis. At the same time, several major capacity-building initiatives were phased in, including establishing UiA as a drone operator led by CIEM, demonstrating aerial communication infrastructure for emergency responders, upgrading CIEMlab, developing a lightweight cyber-range with KraftCERT, establishing a simulation and training centre, and creating a CIEMlab sandbox for cyber-physical systems hacking and defence. These activities illustrated a structured and ambitious roadmap for strengthening both research excellence and practical capabilities.

The milestones related to national workshops, international conferences, grant applications (SFI, Horizon Europe, and RCN), and EVU courses have all been achieved. Regarding the infrastructure and capacity-building initiatives, the milestones have been partly met while some are still work in progress. The cyber-range and sandbox for cyber-physical systems have been established by the Department of ICT, related to the Master programme in Cybersecurity Engineering. As part of the Airbonnet project, UiA has been certified as a drone operator and equipment purchase has been funded by CIEM. However, due to Professor Romero reducing his position at UiA, the planned further testing and demonstration involving external participants has been postponed. As part of the TEKRI research infrastructure proposal, CIEM plans to collaborate with USN on establishing a drone lab. Regarding the simulation research activities led by professor Sanfilippo, available lab space at Campus Grimstad has proved to be a limiting factor. However, the new CIEM Joint Operations Room (Samvirkerommet) established at Campus Kristiansand in collaboration with the IT services has the capacity to serve as a simulation and training centre and represents a major upgrade of the CIEMlab infrastructure.

2.7 Follow-Up of EVALMIT evaluation

As part of the national evaluation of mathematics, ICT, and technology (EVALMIT 2023–2024), CIEM was assessed by the Government as part of the monitoring of the state of research. The evaluation provided a set of recommendations related to strategic focus, performance management, collaboration, and funding.

CIEM has actively followed up these recommendations. The centre has strengthened its strategic planning through clearer benchmarks and KPIs set up in the PRIFORSK proposal, increased its international academic collaborations, and taken concrete steps to improve gender balance, including appointing a female centre director and increasing the share of women in senior roles. Cooperation with national authorities and government programmes on emergency preparedness and societal security has been further reinforced.

In response to the recommendation to sharpen its research profile, CIEM has restructured and refined its research clusters to achieve greater thematic focus and depth (See Section 6). The centre has also intensified its efforts to increase third-party funding, particularly through participation in EU and other major external funding programmes (for example in 2025 CIEM is a part of two funded EU projects). In parallel, CIEM has expanded its role in organising and contributing to conferences, workshops, and continuing education, thereby strengthening both scientific impact and visibility.

3. Organization

3.1 The centre's formal organization

The Centre for Integrated Emergency Management (CIEM) operates as a multidisciplinary entity housed at the University of Agder (UiA) and coordinated by the Faculty of Social Sciences. From 2022 to August 2024, CIEM PRIFORSK was led by Prof. Bjørn Erik Munkvold, who had also served as Director of CIEM since

Figure 1 CIEM Structure

Practitioner Advisory Board, provide strategic input. Research activities are organized through research cluster PIs and CIEMlab, with all research staff contributing to the centre's scientific output and societal impact.

3.2 The organization of the centre's research activities

CIEM is organized in research clusters, where each cluster is led by a PI and a co-PI. The **Initial plan** and Research Agenda of CIEM focus on interdisciplinary research to enhance societal resilience and civil protection through technology-based innovation. The initial agenda is organized into **five research clusters**:

Community Resilience: This cluster focuses on improving disaster preparedness and response at the community level. Key areas include risk assessment, crisis communication, social media analysis, misinformation mitigation, and involving vulnerable groups in resilience-building efforts. It builds on prior projects like the H2020 Smart Mature Resilience (SMR) and RISE Social Media Analytics. **Technological Advancements for Humanitarian Aid:** This cluster explores how ICT advancements can improve humanitarian operations, including data gathering, cross-sector collaboration, local resource utilization, and decision support systems. It emphasizes green, socially sustainable, and inclusive humanitarian responses, leveraging technologies like drones, blockchain, and 3D printing.

Figure 2 Research Clusters (2022-2024)

making in emergency scenarios and plans to establish a simulator and training center for collaborative emergency management. During PRIFORSK this cluster was split into two unique strong areas: **Augmenting Robots** (focuses on robotic technologies) and **Mobile Communication and Information Processing** (focuses on mobile communication and UAV technologies). **Cybersecurity for Resilient Organizations and Societies:** This cluster addresses vulnerabilities in digital ecosystems, particularly in critical cyber infrastructures (CCI) and essential service operators (ESO). It aims to strengthen societal cybersecurity resilience through research and collaboration with public and private organizations. The operational structure of CIEM, containing six clusters (2022-2024) can be seen in Figure 2.

2017. From August 2024, CIEM is led by Prof. Jaziar Radianti. The centre director's role is to ensure strategic leadership and interdepartmental collaboration.

The CIEM PRIFORSK was based on integrating expertise of the researchers from various faculties, including the Faculty of Engineering and Science as well as the School of Business and Law. This formal organizational structure supports cross-disciplinary collaboration, enabling CIEM to address complex challenges in societal resilience and innovation through research and knowledge dissemination.

Figure 1 shows CIEM's organizational structure, with the CIEM Steering Group and CIEM management at the top, supported by a manager and administrative manager. Two advisory boards, the Scientific Advisory Board and the

Practitioner Advisory Board, provide strategic input. Research activities are organized through research cluster PIs and CIEMlab, with all research staff contributing to the centre's scientific output and societal impact.

Information Support for Collaborative Emergency Management: This cluster aims to enhance situational awareness, coordination, and decision-making among emergency stakeholders. It focuses on utilizing diverse data sources, designing ICT-supported procedures, involving volunteers, and enabling systematic evaluation and learning from emergency events.

Technologies for Augmenting Emergency Management Operations: This cluster develops assistive and autonomous technologies for emergency responders, such as UAVs, wearable equipment, and robots for inaccessible areas. It also explores balancing centralized and decentralized decision-

In response to changes in CIEM membership, the completion of projects that previously shaped the cluster structure, and the emergence of new strategic research themes—while maintaining continuity with the existing structure shown in Figure 2—the research clusters were refreshed to better align with CIEM’s priorities for the period 2024–2026. This renewal involved the inclusion of new thematic focuses, updates to the naming of several clusters, and revisions of the associated research themes and keywords, ensuring both coherence with past activities and responsiveness to evolving research and societal needs. Compared to the 2022–2024 structure (Figure 2), several clusters have been refined (Table 6). *The Community Resilience* cluster now places greater emphasis on volunteer roles and less on social media research. *Technological Advancements to Support Humanitarian Aid* explicitly incorporates an ICT for Development (ICT4D) perspective. *Situational Awareness and Collaboration in Emergency Management* has broadened its scope to include risk and systemic risk modelling, diverse user groups, and perspectives on inclusion, universal design, gender, and intersectionality. *The Cybersecurity* cluster has expanded thematically to include compliance, cyber deception, and digital supply chains. *AI and Robotics for Human Augmentation and Teaming in Emergency Situations* now emphasizes AI applications and human–robot teaming. *The Mobile Communication Infrastructure and Information Processing* cluster remains largely unchanged.

Table 6 Updated Cluster Activities between 2024-2026

Cluster	Example topics
Community resilience	Education and awareness, early warning, vulnerable groups, risk perception, crisis communication, volunteer integration,
Technological advancements to support humanitarian aid	Cash-based assistance, in-kind logistics and supply chain management, localization and decolonization of aid, circular economy, sustainability, and medical supply chains in humanitarian contexts.
Situational Awareness and Collaboration in Emergency Management	Socio technical, information risks; IS development for EM; interconnectedness of people, organizations, IT; Situational awareness and common operational picture, decision support and command-control systems; diversity, inclusion, universal design and ableism; polarization in society; systemic risk modelling and assessment; gender and intersectionality
Cybersecurity	Cyber incident management, cyber deception, cyber situational awareness, governance/risk/compliance (GRC), digital supply chains, cyber resilience, human-centred cybersecurity, cyber-physical systems, economics of cybersecurity, human-centered cybersecurity, trust to digital identity.
AI and Robotics for Human Augmentation and Teaming in Emergency Situations	Human–robot teaming, search and rescue operations, drones and ground robots, cross-sector response, sensor-based robot systems for situational awareness, adaptive robot behaviour, AR/VR/MR, and data-driven decision support.
Mobile communication infrastructure and information processing for EM	Autonomous mobile communication infrastructure, UAVs with onboard base stations, AI and optimization algorithms, sensor data collection, heterogeneous data fusion, signal processing, and control-centre information exchange.

Note that for future development, while the current research areas will still be maintained, we have also performed a mapping of competencies towards three main trends CIEM would pursue further, i.e., Total Preparedness, which is explained further in Section 6. It is worth mentioning that the most important continuous challenge for the centre is to ensure that the level of activity within the various clusters is maintained, in order to continue to realize the centre’s interdisciplinary potential. This requires that CIEM researchers have the opportunity to dedicate part of their research time to contributing to the centre’s activities, which in turn depends on teaching loads and other obligations within their respective departments. Here as well, we see a need for stronger support from the leadership of the involved faculties and departments to ensure the centre is given strategic priority in the further allocation of resources, such as PhD candidates.

3.3 Past and present centre participants, and degree of participation (% of man-years)

Table 7 below shows all previous and active centre participants as professors and associate professors.

Table 7 Past and Present CIEM Participants

Name (Gender)	Position	Attachment to UiA	Period	Department	% involvement
Jaziar Radianti (F)	Professor	Full-time	Permanent	Information systems	80 %
Bjørn Erik Munkvold (M)	Professor	Full-time	Permanent	Information systems	80 %
Christian Webersik (M)	Professor	Full-time	Permanent	Global development and planning	40 %
Devinder Thapa (M)	Professor	Full-time	Permanent	Information systems	15 %
Marko Niemimaa (M)	Professor	Full-time	Permanent	Information systems	60 %

Filippo Sanfilippo (M)	Professor	Full-time	Permanent	Engineering Sciences	25 %
Daniel Romero (M)	Professor	Full-time	Permanent	ICT	40 %
Jose J Gonzalez (M)	Professor	Emeritus	Retired	ICT	20%
Paolo Spagnoletti (M)	Professor	Part-time	Permanent	Information systems	20 %
Vladimir Oleshchuk (M)	Professor	Full-time	Permanent	ICT	10 %
Andreas Prinz (M)	Professor	Full-time	Permanent	ICT	5 %
Mohan Kolhe (M)	Professor	Full-time	Permanent	Engineering Sciences	10 %
Naima Saeed (F)	Professor	Full-time	Permanent	Management and Innovation	
Sofie Pilemalm (F)	Professor II	Part Time	05.21-05.26	Information systems	20 %
Siri Eriksen (F)	Professor II	Part Time	01.26-12.26	Global development and planning	20%
Svein Olav Nyberg (M)	Assoc. Prof.	Full-time	Permanent	Engineering Sciences	20%
Mohammad Poursina (M)	Assoc. Prof.	Full-time	Permanent	Engineering Sciences	20%
Hossein Baharmand (M)	Assoc. Prof.	Full-time	Permanent	Management and Innovation	40 %
Hanne Haaland (F)	Assoc. Prof.	Full-time	Permanent	Global development and planning	20 %
Hege Wallevik (F)	Assoc. Prof.	Full-time	Permanent	Global development and planning	10 %
Astrid Bredholt Stensrud (F)	Assoc. Prof.	Full-time	Permanent	Global development and planning	10%
Nadia Noori (F)	Assoc. Prof.	Full-time	Permanent	ICT	20%
Terje Gjøsæter (M)	Assoc. Prof.	Full-time	Permanent	Information systems	60 %
Wael Soliman (M)	Assoc. Prof.	Full-time	Permanent	Information systems	40 %
Elina Niemimäki (F)	Assoc. Prof.	Full-time	Permanent	Information systems	40 %
Rania F Elgazzar (F)	Assoc. Prof.	Full-time	Permanent	Information systems	20%
Peter Andre Busch (M)	Assoc. Prof.	Full-time	Permanent	Information systems	10%
Per Arne Andersen (M)	Assoc. Prof.	Full-time	Permanent	ICT	10%
Dounia Dahlioui (F)	Asst. Prof	Full-time	Temporary	Engineering Sciences	10%
Morgan Storm Scoville-Simonds (M)	Post.Doc	Full-time	Temporary	Global development and planning	10%
Past Participant					
Tim Majchrzak (M)	Professor	Full-time	Permanent	Information systems	60 %
Janis Gailis (M)	Assoc. Prof.	Full-time	Permanent	Information systems	10 %
Pankaj Pandey (M)	Assoc. Prof.	Full-time	Permanent	Information systems	60 %
Illan Kelman (M)	Professor II	Part-time	30.07.25	Global development and planning	20%

Concerning gender balance: The share of female researchers at the centre has risen from 28% in 2022 to 36% in 2026. Three of the ten research group PIs at the centre are women. Following the leadership change at CIEM in August 2024, the centre is now headed by a female director. CIEM has also continued its efforts to recruit women to new PhD and postdoctoral positions whenever possible.

3.4 The centre's disposition of internal strategic funds from the university board and host faculty (and other faculties)

The CIEM PRIFORSK budget includes 2 PhD positions from the UiA board and 3 PhD positions as in-kind contributions from the host Faculties. The latter include 2 PhD positions from the Faculty of Social Sciences (1 from the Department of IS and 1 from the Department of Global Development and Planning - IGUS) and 1 from the Faculty of Engineering and Science. Further, CIEM receives 2 million NOK per year (now adjusted to 2,25 mills. NOK) from the UiA board, and in-kind funding from the host faculties totalling 10,600,000 NOK. Of this, the Faculty of Engineering and Science contributes approx. 930,000 NOK (10 % positions to the PIs in the Department of ICT and Engineering and Sciences, respectively) and the Faculty of Social Sciences the remaining amount (this including the in-kind PhD position from IGUS). Thus, the Faculty of Social Sciences contributes 91 % of the in-kind funding and the Faculty of Engineering and Sciences contributes approximately 9 %. This was considered for the allocation of positions between the faculties. This 10% funding has been allocated to cover the hours of the PIs in these contributing departments. Strategic funds has also been allocated to support travel, workshop attendance, conference support, infrastructure, software licenses, student assistants and temporary engagement of personnel to support our strategic goals, and KPIs.

3.5 The use of internal recruitment positions provided to the centre

The recruitment position from PRIFORSK have been allocated for **one PhD** in the Dept of IS, and **one PhD** in Dept. of ICT. Moreover, **three PhD positions** are assigned in the Dept. of IS, Dept. of Global Development and Planning, and Dept. of Engineering as the in-kind contributions from the involved Departments/ Faculties. **One additional PhD** in-kind from Dept. of Global Development and Planning gives in total **six CIEM PhD positions**.

In addition, the PRIFORSK budget has been used to support a range of complementary research and infrastructure roles. This includes funding for a three-year **postdoctoral position** starting in 2022, initially full-time and subsequently continued at a reduced level to ensure continuity and completion of key research activities. The budget also covers **Professor II positions** (20%) over a five-year period, allocated to one Professor II position (20%) at the Dept. of Global Development and Planning, from August 2022 to July 2025, and the prolongment of another Professor II position (20%) at the Dept. of IS from 03.05.23-02.05.26.

Furthermore, PRIFORSK funding has contributed to technical and research capacity through the allocation of CIEMlab technician support (approximately 200 hours per year), including co-funding of the final year of a PhD project. As part of a flexible and needs-oriented funding strategy, initially planned postdoctoral funding from 2024 was reallocated to co-finance externally funded activities. This included contributions to the recruitment of **two** three-year postdoctoral positions, support for CIEM-related research carried out by two PhD fellows in the Department of Engineering and Sciences, and financing of a **Professor II position** within the Department of Global Development and Planning toward the end of the PRIFORSK period.

3.6 Supervision of master students and PhD candidates affiliated with the centre, including brief information about PhD candidates' progress and (estimated date of) completion

Table 8 Supervision of PhD and Master Students

Name (Gender)	Supervisors	Department	Progress	Finishing Dates
Active PhDs				
Kjetil Rustenberg (M)	Jaziar Radianti, Terje Gjøsæter, Bjørn Erik Munkvold	Information Systems	Completed 5 papers	Estimated Submission: Autumn 2026
Osman Ibrahim (M)	Bjørn Erik Munkvold	Information Systems	Ongoing	Estimated submission: Spring 2027
Tien Ngoc Ha (M)	Daniel Romero	ICT	Toward completion	Estimated Submission: Autumn 2026
Prasenjit Dhara (M)	Daniel Romero, Jaziar Radianti	ICT	Ongoing	Estimated Submission: Autumn 2027
Pham Q. Viet (M)	Daniel Romero	ICT	Toward completion	Estimated Submission: Autumn 2026
Fabien Sechi (M)	Nadia Saad Noori	ICT	Ongoing	Estimated Submission: Autumn 2027
Tererai Obey Sithole (M)	Hanna Haaland, Hege Wallevik	Global development and planning	Ongoing	Estimated Submission: Autumn 2027
Kay Arne Søgård (M)	Karl Emil Pull, Christian Webersik, Ilan Kelman	Global development and planning	Ongoing	Estimated Submission: Spring 2028
Minh Tuan Huan (M)	Filippo Sanfilippo	Engineering and Sciences	Toward completion	Estimated Submission: Autumn 2026
Syed Kumayl Raza Moosavi (M)	Filippo Sanfilippo	Engineering and Sciences	Ongoing	Estimated Submission: Spring 2027
Hareesh Chitikena (M)	Filippo Sanfilippo	Engineering and Sciences	Toward completion	Estimated Submission: Autumn 2026
Muhammad Hamza Zafar (M)	Filippo Sanfilippo	Engineering and Sciences	Ongoing	Estimated Submission: Spring 2027
Active PostDocs				
Lucia Herrera (F)	Jaziar Radianti, Terje Gjøsæter, Rania Elgazzar	Information Systems	Start 20.04.2026	19.03.2029
Stella Polikarpus (F)	Jaziar Radianti, Terje Gjøsæter	Information Systems	Start 05.03.2026	20.11.2027
New PostDoc	TBD	Information Systems	Start Spring 2026	Spring 2029
Previous PhD Students (Completed period)				
Mesereth Adamu (M)	Marko Niemimäki, Paolo Spagnoletti	Information Systems	Completed	Thesis to be defended 10 of June, 2026

Kristine Steen Tveit (F)	Bjørn Erik Munkvold, Jaziar Radianti	Information Systems	Completed	10.11.2022
Sindisiwe Maguthswa (F)	Jaziar Radianti, Margunn Aanestad	Information Systems	Completed	22.05.2024

Aima Khan (F)	Hossein Baharmand	Management and Innovation	Completed	Autumn 2025

Concerning the master students, there are two programs affiliated to CIEM: Master of Cyber security Management (Information Systems) and Cybersecurity Technology (ICT). It was started as a joint programme but then in 2024 it was split. The table summarizes the number of master's theses supervised within the two cybersecurity programs affiliated with CIEM:

- IS-507-1 Cybersecurity Management (hosted by the Department of Information Systems)
- IKT523-G Cybersecurity Technology (hosted by the Department of ICT)

Overall, CIEM has contributed substantially to cybersecurity education, with particularly strong student outputs with 130 students graduated. The numbers are reported per semester from Spring 2021 to Spring 2025. In Spring 2026, 31 students are expected to be finished. Overall, there is a steadily increasing interest in CIEM-related cybersecurity topics, especially in the management-oriented programme. This reflects CIEM's growing visibility, stronger research environment, and the relevance of cybersecurity competencies in society. Active supervisors that are CIEM members for the master student thesis are Wael Soliman, Jaziar Radianti, Marko Niemimma, Elina Niemimma, Rania Elgazzar, Devinder Thapa, Nadia Noori, Terje Gjøsæter, and Paolo Spagnoletti. However, Some CIEM members (Terje Gjøsæter, Jaziar Radianti, Kristine Steen-Tveit, Bjørn Erik Munkvold and Kjetil Rustenberg) are also active at supervising master thesis in master's in information systems when CIEM themes emerge or selected by the students.

The new master's programme in Global Development, Crisis and Change at the Department of Global Development and Community Planning graduated 17 students in 2025. In 2026, 25 students are registered for their master's thesis. Altogether, this means that approximately 42 students will have graduated from the programme. On this information, see also Section 2.4.

3.7 The centre's external partners (academic and non-academic), including information about the extent of collaboration with the centre's partners

CIEM has strong collaborators both academic environments and practitioners, as seen in the selection of collaborators shown in Table 9. Note that this is not an exhaustive list of partners we have collaborated in different projects from time to time.

Table 9 CIEM Collaborators

Type	Collaborators
Academics and Research Organizations	National: University of Southwestern (USN), University of Innlandet, Nord University (Project collaborators in the TEKRI project; NORSAR (collaborator in the TOGETHER project); Norges Geotekniske Institutt and Stiftelsen Frischsenteret (SFF Proposal); NTNU (SFI and SFF proposals); OsloMet (Universal design-related competences); Institutt for energiteknikk (IFE); Vestlandsforskning (proposal development), NORCE (ongoing projects, proposal development) International: TECNUN, University of Twente, Vrije University (SFI); University of Kyoto (Mobility/Visiting scholars); Center for Advanced Research in Emergency Response (CARER), Linköping University, Sweden (Professor II, joint proposals and publications); European Research Centre on Information Systems (ERCIS) - Competence Centre on Crisis Management, Germany; HUMLOG – The Humanitarian Logistics and Supply

	Chain Research Institute, Hanken School of Economics, Finland (Joint project and proposals); University of Nebraska, Omaha, USA (Joint teaching, guest lectures, visiting scholars); Siisekaitseakademia, Estonia (PostDoc at CIEM, joint publications);
Municipalities	Kristiansand (involves in various projects and proposal activities), Arendal, Åmli, Arendal, Birkenes, Bygland, Bykle, Farsund, Iveland, Flekkefjord, Gjerstad, Grimstad, Hægebostad, Lindesnes, Lillesand, Lyngdal, Kvinnedal, Risør, Sirdal, Tvederstand, Vegårshei, Vennesla, Åresal (EVU course participants, joint project) and Oslo municipality (joint research project, public PhD).
Local Organizations	Home Guard-07 (civil-military cooperation), County Governor of Agder, KS Agder, Fire services IKS (Kristiansand), Oslo Police district, Agder Police district, Local emergency operations centres (11X etater), Civil defence, Agder Redcross, Kristiansand Harbour authority (Proposal development, Local Exercises); Region Kristiansand (preparedness network), Kristiansand region fire and rescue, Agder County municipality, Local hospital (Sørlandet sykehus)
National	The Norwegian Directorate for Civil Protection (DSB); The Norwegian Mapping Authority (Kartverket); The Norwegian Coastal Authority (Kystverket), The Norwegian Communications Authority (NKOM), Norwegian Search and Rescue Agency (Hovedredningsentralen)
Companies	F24, Rayvn, Bliksund, Å Energy, Glitre Nett, Intoto, Cyviz, Fynd Reality, Strategyfinder, NC-Spectrum, Net Security, SIKRI (all related both for research project development and teaching/ guest lecture/ internship)

4. Scientific Excellence and Impacts

4.1 Scientific Excellence

As one of the Priority Research Centres at UiA, CIEM has continued to thrive as an interdisciplinary research centre. We have further refined our scope, strengthened our research fields, and advanced the integration of emergency management and cybersecurity research to contribute to societal resilience.

Through interdisciplinary collaboration across CIEM clusters, we incorporate socio-technical perspectives, empirical and theoretical research, as well as practice-oriented studies. Our members have published several articles in top-tier journals, both within their respective disciplines and in the broader domain of emergency management research. Furthermore, by working flexibly within our groups and following a bottom-up strategy, we have submitted 30 applications for external funding between 2022 and 2026, resulting in 10 successfully funded proposals (See also Section 2.3 on detailed KPIs).

We have also established a master's programme in cybersecurity, with a management-oriented track hosted by the Department of Information Systems and a technical cybersecurity delivered by the Department of ICT, and Master in Global Development, Crisis and Change, where most teachers of the program are a part of CIEM. Two EVU courses have been established in the Dept of Information Systems i.e., “AI meets Cybersecurity: Fundamentals” and “Collaboration, proactive staff practices and digital tools for crisis preparedness” (See Section 2. Meanwhile, our PhD programme is organized through the participating departments (Information and Communication Technology, Information Systems, Global Development and Planning, and Engineering and Sciences), where doctoral candidates actively address CIEM-related themes. Below is an overview of what CIEM considers to be its most significant scientific contributions:

- CIEM has contributed 179 journal articles *including* level 2 publications in 2022-2026.
- 55 top-tier publications (level 2) in SJIS, Safety Science, Routledge outlets.
- 210 peer-reviewed publications on level 1 (book chapters, conference proceedings), and 7 articles on level 2 (Z books, Routledge). Total results: 389 research publications
- Nine finished PhDs, twelve ongoing PhDs - and six postdoc positions (3 ongoing and 3 completed)
- Obtained more PhDs and postdocs that were initially planned through external funding or more in-kind contribution for involved departments.
- Five CIEM researchers were promoted to be professors, including one female professor
- Established the CIEM Joint Operations Room (Samvirkerommet) in cooperation with IT department
- Connecting with local practitioners and actively participated or invited to speak about various issues in various forums as has been listed in Table 13
- 161 master cybersecurity students finished by spring 2026
- 42 master students in Global Development, Crisis and Change completed by Spring 2026.

The following list presents selected key publications from CIEM PRIFORSK. The publications were primarily chosen from recent outputs, with a particular emphasis on Level 2 journals, irrespective of citation counts. In addition, the selection aims to ensure representation across the different research clusters to reflect the breadth of CIEM's scientific production. CIEM members' names as authors are in bold:

Table 10 List of 10 selected publications between 2022-2026

- | |
|--|
| 1. Radianti, J., & Pilemalm, S. (2025). Participatory design for inter-agency collaboration: Requirements elicitation from heterogeneous stakeholders. <i>Scandinavian Journal of Information Systems</i> , 37(1), 2. (Level 2). |
|--|

- Summary:** This study explores a stakeholder theory-driven participatory design (PD) approach to elicit requirements for inter-agency collaboration (IAC) in emergency management, addressing challenges posed by heterogeneous stakeholders with diverse roles and interests. The workshop aims at identifying high-level requirements across four themes: map symbol harmonization, terminology standardization, information sharing, and learning from incidents. The findings highlight the value of integrating stakeholder theory into PD to manage diverse groups effectively, foster collaboration, and derive actionable insights for designing shared systems in complex IAC contexts.
2. **Baharmand, H.** (2025). Evaluating protection, inclusiveness and dignity in humanitarian aid: a systematic literature review. *Journal of Humanitarian Logistics and Supply Chain Management*.
Summary: This article reviews academic literature and humanitarian reports to identify gaps in evaluating humanitarian aid concerning protection, inclusiveness, and dignity (PID). It highlights the limitations of current evaluation frameworks, which prioritize universal metrics over localized indicators, and calls for context-specific approaches that actively involve affected communities to ensure ethical and effective aid delivery. The study emphasizes the need for meaningful, universally accepted PID indicators and suggests future research directions to address these gaps, including leveraging digital tools and fostering community engagement.
 3. Opach, T., Rød, J. K., & **Munkvold, B. E.** (2023). Map functions to facilitate situational awareness during emergency events. *Cartography and Geographic Information Science*, 50(6), 546-561.
Summary: The study investigates the map functions requirements for emergency responders to enhance situational awareness. It categorizes map-based tools into two types: Common Operational Picture (COP) tools for real-time resource management and Common Situational Picture (CSP) tools for strategic planning and situational understanding. The research identifies 25 essential map functions, highlights the need for user-friendly and planning-focused tools, and emphasizes the importance of user engagement in tool development to ensure effective emergency response.
 4. **Baharmand, H.** (2025). Exploring barriers to circularity in humanitarian supply chains. *International Journal of Disaster Risk Reduction*, 125, 105572.
Summary: The study explores barriers to implementing circular economy principles in humanitarian supply chains (HSCs), identifying funding gaps, unpredictable demand, and insufficient training as critical challenges. Using interpretive structural modelling (ISM) and expert focus groups, it develops a hierarchical model to prioritize interventions and proposes feasible circular approaches like reusing, repairing, repurposing, and recycling that require minimal infrastructure. The findings aim to guide humanitarian organizations in balancing immediate disaster response needs with long-term environmental sustainability.
 5. **Zafar, M. H., Moosavi, S. K. R., & Sanfilippo, F.** (2025). Federated learning-enhanced edge deep learning model for EMG-based gesture recognition in real-time human-robot interaction. *IEEE Sensors Journal*, 25(5), 9139-9151. **(Level 2)**.
 6. **Summary:** This study introduces a Federated Learning (FL)-enhanced deep learning model for real-time EMG-based gesture recognition in human-robot interaction (HRI), addressing challenges like data privacy, signal noise, and edge device limitations. Using a custom dataset collected with a Mindrove 8-channel EMG armband, the model achieved high accuracy (96.92% without quantization and 95.99% with quantization) and an 89% reduction in model size, making it ideal for edge deployment. The model was validated in real-time robotic control scenarios, demonstrating its practical application in disaster management and healthcare environments.
 7. **Soliman, W., & Rinta-Kahila, T.** (2024). Unethical but not illegal! A critical look at two-sided disinformation platforms: Justifications, critique, and a way forward. *Journal of Information Technology*, 39(3), 441-476. **(Level 2)**.
Summary: The article examines the crowdsourced disinformation platforms, which operate as two-sided marketplaces connecting disinformation requesters with crowdworkers for tasks like fake reviews, likes, and comments. It identifies six techniques used by these platforms, such as "claim of entitlement" and "language sanitization," and evaluates their validity against criteria like truth, sincerity, and legitimacy, finding most to be invalid or contestable. The study highlights the ethical and societal risks of such practices and proposes countermeasures like public education, invalidation campaigns, and stricter legal frameworks.
 8. **Romero, D., Viet, P. Q., & Shrestha, R.** (2024). Aerial base station placement via propagation radio maps. *IEEE Transactions on Communications*, 72(9), 5349-5364. **(Level 2)**.
Summary: This paper presents a new method to place aerial base stations (ABSs) on drones to improve mobile connectivity in areas with limited or damaged infrastructure. The approach uses detailed radio signal maps to find the best locations for drones, ensuring strong connections while minimizing the number of drones needed and avoiding restricted areas. Tests show the method is more efficient than existing solutions, especially in serving many users, and it adapts well to changes in signal predictions.
 9. Wisner, B., Alcántara-Ayala, I., Gaillard, J. C., **Kelman, I., & Marchezini, V.** (2025). *Understanding and addressing disaster risk: Who speaks? Who suffers?* Taylor & Francis. **(Level 2)**
Summary: This book assumes that disasters are socially constructed processes influenced by vulnerabilities, power imbalances, and environmental dynamics, requiring a shift from top-down approaches to localized, inclusive strategies. Addressing root causes such as systemic inequalities, colonial legacies, and governance are essential for sustainable disaster risk reduction. Emphasizing local knowledge, community participation, and equitable resource distribution fosters resilience and meaningful living through collective action.

10. Yore, R., Fearnley, C., Fordham, M., & **Kelman, I.** (2025). Disability-inclusive warnings. In *An Introduction to Disability Inclusive Disaster Risk Reduction* (pp. 229-250). Routledge.

Summary: Disability-inclusive warnings aim to ensure that all individuals, including those with disabilities, are effectively reached and supported during disaster risk reduction efforts. This involves designing warnings with intersectionality in mind, using multiple communication modes, engaging people with disabilities (PwDs) and their networks in the process, and addressing societal barriers that create exclusion. Achieving "Warnings for All" requires continuous collaboration, trust-building, and adaptability to meet diverse needs, while integrating inclusivity into policies, practices, and long-term strategies.

4.2 The centre's communication and dissemination activities

To describe the communication and dissemination activities beyond scientific publications, we add what have been described in Section 2.5 on “*Dissemination and Interaction with Practices: Original KPIs and Achievement*”, as seen in Table 11.

Table 11 CIEM Dissemination, Outreach, and Interaction with Practice (2022–2025)

Year	Category Type of Activity	CIEM Role	Examples / Description
2022	Category: Media & Popular Science Type: Professional journal, kronikk, media interviews	Contributor	Publications in <i>Ambulanseforum</i> , newspaper kronikk, interview with NRK Sørlandet
	Category: Media & Outreach Type: Project video	Producer	INSITU project video with participation from local emergency preparedness actors
	Category: Conferences & Events Type: National conference	Participant / Speaker	Civil Security Conference (2022), Rescue Conference (2022), Kristiansand Conference
	Category: Public Engagement Type: Arendalsuka	Organizer / Participant	Annual Arendalsuka participation (2022–2026)
2023	Category: Exercises & Advisory Roles Type: Emergency preparedness exercises	Lead / Advisor / Observer	Planning and evaluation of LRS exercise in Agder; advisory role for LRS exercise at 110 Øst; observer at PLIVO exercise (Oslo Police District); observer at industrial safety exercise at GE Healthcare
	Category: Keynotes & Presentations Type: Invited lectures	Keynote / Presenter	Norwegian Directorate for Civil Protection (DSB), EU Joint Research Centre, NOKOBIT, Agdering Top Executive Forum
2024	Category: Conferences & Events Type: National conference	Host	Geoklar Conference 2024
	Category: Conferences & Forums Type: National and regional forums	Participant / Speaker	KS-Agder (2024), Geomatikk Forum (2024), DSB Map Day (2024), Fylkesberedskapsrådet (2024), Leader Gathering 11X Norway (2024), Sørlandet Hospital professional development day (2024);
	Category: International Outreach Type: Academic & professional forums	Keynote / Presenter	Karlstad University (Sweden), Kystverket thematic day, AI, Data and Robotics Forum
2025	Category: Forums & Networks Type: National and regional forums	Participant / Speaker	Geoforum Sørlandet (2025), “Security and Emergency Preparedness Personnel in Agder” (2025), Maritime Preparedness (2025), Grimstad municipality preparedness (2025), UiA Dream Day (Kristiansand municipality), Bliksund Leader Gathering (2025), Frokostsamling with Ivar Lunde – «Nå er det alvor»; Kristiansand Conference
	Category: Media & Outreach Type: Media contributions	Interviewee / Author	NRK Radio and TV interviews; op-eds in <i>Fædrelandsvennen</i> ; contributions to <i>Forskerforum</i> , <i>Khrono</i> , <i>Teknisk Ukeblad</i> , <i>Digi.no</i>
	Category: Policy Engagement Type: Research policy consultation	Invited contributor	First-time participation in a consultation meeting at the RCN on interdisciplinary societal security themes
2026	Category: Media Type: Media contributions	Interviewee	NRK TV Sørlandet interview
	Category: Workshops (plan) Type: National workshop	Organizer	National workshop on climate change crisis, 2–3 September 2026

To maximize the impacts of our works and activities, CIEM have conducted the following measures:

- We have shared our papers in open channels (such as Academia, Research Gate, and university open repository), sometimes also using popular channels such as Facebook and LinkedIn.

- For dissemination to the public, we established a presence on LinkedIn (1182+ followers), and Facebook (350+ followers), where we regularly update on our research or activities. CIEM individual members have been also active in media outlets throughout Norway.
- Finally, we have conducted various activities linking research and practitioners.

Several of the results from the INSITU project have been carried forward in the form of innovation and commercialization activities:

- UiA has acquired the IPR for the SQUARE map-based collaboration tool for potential commercialization, and emergency preparedness actors have responded positively to the solution.
- The project's map symbol archive is being used as a basis for further standardisation work by Standards Norway on behalf of the Norwegian Directorate for Civil Protection (DSB).
- Tingtun AS is continuing the TERMER application as a commercial service.
- The INSITU project and the above activities form the basis for an EVU course on inter-agency collaboration and crisis management tools.

4.3 The interdisciplinary nature of CIEM's research

CIEM's research is highly interdisciplinary, combining perspectives and methods from information systems, computer science, engineering sciences, global development, and social sciences. As documented in the Norwegian Research Information Repository (NVA) project portfolio and CIEM's UiA profile, the centre conducts research across a wide spectrum of interconnected themes, including emergency management, societal resilience, cybersecurity, situational awareness, UAV-based communication systems, humanitarian logistics, and social media analytics. Through this integration of technological innovation with human, organizational, and societal perspectives, CIEM addresses complex crisis- and preparedness-related challenges that cannot be solved within a single academic discipline. The breadth of topics—from sensor technologies and autonomous systems to crisis informatics, community resilience, and collaborative decision-making—demonstrates CIEM's strong interdisciplinary foundation and its capacity to generate research outcomes with scientific, practical, and societal relevance.

CIEM's interdisciplinary scope is reflected in a broad range of research topics documented in NVA. The centre conducts research on emergency management and crisis management, examining how organizations prepare for, respond to, and recover from disruptive events. CIEM also studies societal and community resilience, focusing on how different actors adapt, collaborate, and build capacity before, during, and after crises. Research on cybersecurity and critical infrastructure protection addresses digital vulnerabilities that influence emergency operations and societal preparedness. Humanitarian logistics and disaster risk reduction represent another important area, where CIEM investigates global, national, and local challenges in aid delivery and risk governance.

The centre also works extensively on situational awareness and the development of common operational pictures, including research on information integration and decision support systems. CIEM's technological research includes UAVs and drones for emergency communication, robotics and human–robot teaming, and advanced sensor technologies. Research on social media analytics and crisis informatics explores how digital information flows affect emergency response, including the challenges of misinformation and data overload. CIEM further investigates digital communication in emergencies and collaborative decision-making processes across agencies. In addition, the centre contributes to innovation through living labs and co-creation with practitioners, following public-private-people partnership (PPPP) models. CIEM also develops simulation and training systems for emergency responders. Finally, its research extends into global development and humanitarian response, linking technology-supported crisis management with broader societal challenges.

CIEM's research employs a wide range of methods reflecting its interdisciplinary profile. Qualitative methods such as interviews, focus groups, workshops, and case studies are widely used in socio-technical and organizational studies, supported by CIEM's strong practitioner engagement. Quantitative and technical methods—including modelling, simulation, machine learning, and performance evaluation—are central to research on drones, sensor systems, cybersecurity, and crisis-informatics technologies. CIEM also uses human-centered and participatory design methods, facilitated by a living lab infrastructure, which enables co-creation, experimentation, and prototype testing with industry and public-sector partners. In addition, field experiments and laboratory evaluations support technology development in communication, sensing, and emergency-response contexts. Through these mixed methodologies, CIEM integrates technological innovation with human, social, and organizational insights, demonstrating genuinely interdisciplinary research.

5. External Funding

Table 12 lists all proposals for external funding acquisition submitted during the PRIFORSK period (See also Table 3 for KPIs concerning proposal development). Typical strengths of the evaluation results of our proposals are characterized by a focus on strategic alignment, clear and ambitious objectives, strong and complementary partnerships, innovative approaches, robust management, stakeholder engagement, credible impact pathways, and attention to open science and ethics. These strengths are consistently recognized as key factors in high-quality project proposals and successful evaluation. Concerning the weaknesses addressed in various proposals revolve around insufficient detail, vague objectives, weak theoretical grounding, limited innovation, unclear impact pathways, stakeholder engagement gaps, budget/resource issues, weak dissemination plans, lack of social/ethical integration, and underdeveloped governance. But the case varies from proposal to proposal, but majority of these proposals got a strong evaluation. Note that CIEM proposals have been prepared both by early career researchers and experienced researchers, thus the evaluation results can vary as well from this perspective. Despite some proposals receiving a good evaluation result, competition can also be a factor affecting the final results, whether or not the application will be granted. The overall evaluation results are included in the appendix of this report.

Table 12 Submitted Proposals for External Funding 2022-2026

Year	Project	Funding Agency	Project Type	CIEM' Role	Status
2022	Achieving Nordic Post-Covid Resilience	NordForsk	Research	Coordinator	Not Granted
	INFORMED: Risk assessment frameworks for emerging technologies and digital transformation in emergency management	Research Council of Norway (RCN)	Research	Coordinator	Not Granted
2023	Research infrastructure for technology-supported crisis management	RCN	Pre-project - INFRA	Coordinator	Granted
	ARTEMIS: Advanced Support Solution for Cybersecurity Readiness and Solutions and Resilient Operations for Complex Critical Cyber Systems and Infrastructures	Horizon Europe	Innovation Action (IA)	Coordinator	Not Granted
	ATHENA - Dynamic framework for heterogeneous Human-robot teaming to augment skills for use in hazardous environments	Horizon Europe	Innovation Action (IA)	Coordinator	Not Granted
	WAARSKU – Warn, Adaptation, Anticipation, Resilience, Support, Knowledge, Understanding	Horizon Europe	Research and Innovation Action (RIA)	Partner	Not Granted
	Samarbeid om klimatilpasning – Systemintegrasjon	RFF Agder	Regional qualification project	Coordinator	Granted
	Samarbeid om klimatilpasning – Evakuering	Statsforvalterens prosjektskjønnsmidler	Local scheme	Partner	Granted
2024	ERC – Hossein Baharmand	EU	Researcher project	Individual proposal	Not granted
	Skole-PLIVO	Statsforvalterens prosjektskjønnsmidler	Local scheme	Partner	Granted
	iTERMS	DG ECHO	Research	Coordinator	Not Granted
	SFI SERENE: Resilient Mission-Critical Ecosystems for Sustainable Services	RCN	Centre for Research based Innovation (SFI)	Coordinator	Not granted
	Securality: Gamification and Mixed Reality Approaches to Improve Cybersecurity Learning Experience and Develop Work Related Competence	RCN	Researcher project	Partner	Not granted
	TOGETHER: Towards enhanced coordination of disaster risk management and governance through a holistic framework for multi-level interaction and communication	Horizon Europe	Research and Innovation Action (RIA)	Partner	Granted
	SAFE: Strengthening Alliances for Emergency Preparedness and Response	RCN	Researcher project	Partner	Not granted
	Mindful Engagement with Trustworthy AI for High Reliability OrgaNising (Metron AI)	Nordforsk	Research	Partner	Not granted

2025	Volunteerism in large-scale crises and a civil defense	Svenske Vetenskapsrådet	Researcher project	Partner	Not granted
	FIER (Flooding, Infrastructure, Evacuation, and Resilience)	Interreg North Sea - EU	Research	Partner	Granted
	INNØVER - Innvasjon i Cybersikkerhet Gjennom Praktiske Øvelser for Bedre Digital Resiliens	RCN – NCC-NO Innovation Support for Tomorrow's Cyber Security	Coordination and Support Activity	Partner	Granted
	DCCRR - Developing collaborative capacity for climate risk resilience	RCN	Collaboration and research project	Coordinator	Not granted
	IMPACT: Empowering Youth for Critical Incidents	RCN	Collaboration and research project	Partner	Not granted
	BRACE - Building Resilient Societies in the Era of Climate Change: Robust Multi-hazard Early Warning Systems	RCN	Collaboration and research project	Partner	Not granted
	DronePreparedness - Support Service for Drones in Preparedness	RCN	Collaboration and research project	Partner	Not granted
	Research infrastructure for technology-supported crisis management (TEKRI), full proposal	RCN	Research Infrastructure of National Importance	Coordinator	Awaiting evaluation results September
	SFI SERENE: Resilient Mission-Critical Ecosystems for Sustainable Services. 2 nd stage Proposal	RCN	Centre for Research based Innovation	Coordinator	Not granted
	SFF COURAGE: Center On Uncertainty and Risk Associated with water induced GEohazards	RCN	Centre for Excellent Research	Partner	Awaiting evaluation results in May
	AI Pioneers for Natural Disasters	Erasmus + – EU	Capacity-building	Partner	Not granted
	SQUARE	RCN	Research Commercialisation	Partner	Granted
	SpAIces: Generative AI for Personalized, Realistic, Inclusive Virtual World Spaces for Education & Training	Horizon Europe	Innovation Action (IA)	Partner	Not granted
	Strengthening Vaccination Systems to Reach Disadvantaged in LMICs	RCN	Collaboration and research project	Coordinator	Not granted

Table 13 Granted Projects 2022-2025

Project	Funding Agency	Project Types	CIEM's Role
TOGETHER	Horizon Europe	Research and Innovation Action	Partner
SQUARE	RCN	Research Commercialisation	Coordinator
INNØVER	RCN/NSM	Coordination and Support Activity	Partner
Skole-PLIVO	Statsforvalteren	Research - Local scheme	Partner
Samarbeid om klimatilpasning – Systemintegrasjon	RFF-Agder	Research -Local scheme	Coordinator
Samarbeid om klimatilpasning – Evakuering	Statsforvalteren	Research - Local scheme	Partner
Research infrastructure for technology-supported crisis management	RCN	Preproject – Research Infrastructure	Coordinator
Joint Operations Room	Internal	Infrastructure	Coordinator
Mari Aarland, PhD	RCN	Industrial PhD	Hosting/ Supervising
Osman Ibrahim, PhD	RCN	Public PhD	Hosting/ Supervising

With respect to the objectives for external funding acquisition, some degree of uncertainty is inherent, particularly in relation to EU funding, given the highly competitive nature of both the national and European

funding landscapes. To address this, the centre is proactively strengthening its engagement with established and competitive consortia, with the aim of contributing to one or more proposal submissions across forthcoming calls. This strategic approach is reflected in the planned proposals towards the 2026 deadlines.

The centre follows a differentiated external funding strategy that balances coordination and participation roles. While being actively involved as a partner in selected small-scale proposals closely connected to practice is considered important to maintain visibility, networks, and funding diversification, the primary strategic focus of the centre is on a smaller number of high-priority proposals where the centre acts as coordinator. This approach allows research leadership capacity and administrative resources to be concentrated where the potential scientific and strategic impact is greatest.

6. Strategy and Plan for Further Development

The research direction of CIEM will be aligned with several national and university strategic documents: 1) Fremtidige forskningsbehov innen Samfunnssikkerhet¹; 2) White Papers (Melding til Stortinget): Meld. St. 9², Meld St. 14³, Meld St. 5⁴; 3) NOU documents: Nå er det Alvor⁵, Når krisen inntreffer⁶, Klimarisiko og norsk økonomi⁷; 4) Relevant documents published by the Directorate for Civil Protection (DSB); 5) UiA and Faculty strategies that include societal security as one of the strategy pillars. The competencies of CIEM members are the main foundation for addressing further themes from the identified strategic documents in our future plan.

Research directions within societal security and preparedness have outlined several strategic needs¹, such as to: 1) strengthen basic research that can provide in depth insight and not only research that solve today's problems; 2) strengthen interdisciplinarity as polycrises become more prevalent, thus transcending traditional academic boundaries. Tomorrow's crises emerge as an intersection between technology, nature, politics and human behaviour to avoid failure of recognizing real-world complexity. 3) enhance cross-sector capacity. Currently the border between societal and state security as well as peace, crisis and war can be blurred, thus cross-sector boundary-research should be strengthened. 4) strengthen research on societal values such as trust, democracy and resilience, and not only limited to technical and operational measures for security critical societal functions. 5) strengthen research on security of supply chains in societal critical functions. CIEM's research aligns well with the abovementioned needs and will make important contributions to fulfil these.

Several thematic areas have emerged as central. These include strengthening prevention and resilience against climate change, natural disasters, pandemics, and organized crime, as well as enhancing societal capacities for crisis response and recovery. Another key area concerns the evolving geopolitical landscape, including hybrid threats, grey-zone challenges, digital vulnerabilities, cross-border risks, polarization, weakened public trust, and other forms of geopolitical instability. Attention is also needed on the value chains that sustain critical societal functions, and on how these can be secured in light of technological developments, climate pressures, and global uncertainty—particularly through engagement with the business sector. Further priorities include the risks associated with climate change, technological and digital vulnerabilities, and the impacts of disinformation and emerging technologies such as AI. Finally, research must address civil–military cooperation, governance involving businesses and volunteer organizations, crisis leadership at all levels, and the ways in which society can contribute to total defence in diverse crisis and conflict scenarios. Looking ahead, CIEM's future strategic priorities will be anchored in relevant national strategies and research agendas, as recommended by Jore et al. (2025)¹ to RCN.

The CIEM future plans are divided into short and long term. In the short-term period 2026–2027, CIEM has several planned and ongoing project engagements. These include participation as a partner in the Horizon Europe project TOGETHER, coordinated by NORSAR and running from 2025 to 2028 and the Interreg project FIER. In addition, CIEM is awaiting the outcomes of two ongoing proposal submissions: the RCN-SFF first-stage application COURAGE—Center on Uncertainty and Risk Associated with Water-Induced Geohazards, developed in collaboration with NTNU, and the RCN-Research Infrastructure proposal TEKRI (Research Infrastructure for Technology-Supported Crisis Management) coordinated by CIEM.

¹ Jore, Borch, Sydnes, Kvernevik (2025). [Notat: Fremtidige Forskningsbehov innen Samfunnssikkerhet](#), RCN.

² Meld. St. 9 (2024–2025) [Report to the Storting \(white paper\)](#). Total preparedness, Prepared for crises and war

³ Meld St. 14 (2024–2025) Melding til Stortinget. [Sikker kunnskap i en usikker verden](#)

⁴ Meld St. 5 (2022–2023) [Langtidsplan for forskning og høyere utdanning](#) (2023–2032)

⁵ Nå er det alvor [Rustet for en usikker fremtid](#), NOU 2023: 17

⁶ [Når krisen inntreffer](#), NOU 2019: 13

⁷ [Klimarisiko og norsk økonomi](#), NOU 2018: 17

Currently we are working on several proposals with deadline April and June 2026:

- *Horizon Europe: CLIMADIS*—Climate Change and Disability – Understanding and Reducing Safety Risks for Vulnerable Populations (Role: Partner), Submitted for evaluation
- *Horizon Europe: Hyvard*—A Large-Scale HYdrogen Valley in Agder to drive the Regional and European Development of a clean transition model (Role: Partner)
- *RCN-KSP: Climate Change* adaptation with NORCE (Role: Partner)
- *RCN-KSP: MAIE* - Managing emerging AI cyber threats in energy sector infrastructures (Role: Coordinator)
- *RCN-KSP: Drones for Preparedness*: Prevention, Response and Recovery with USN (Role: Partner)
- *RCN-KSP: IRIS* (Integrated Risk Management framework for Infrastructure Security) with NGI (Norwegian Geotechnical Institute). (Role: Partner)
- *RCN-KSP: COURAGE extension* with Frisch Centre as a lead. (Role: Partner)

The UiA strategic funding has significantly contributed to CIEM being an attractive collaboration partner for externally funded projects.

Long Term Plans (From now and beyond 2029): CIEM will continuously rely on our core competencies represented as clusters, i.e. community resilience, technology advancements to support humanitarian aid, Information support for collaborative emergency management, Augmenting robots, Mobile communication and information processing and Cybersecurity for resilient organization and societies. However, we will focus more on the following themes as describe in Figure 3. *First*, CIEM will continuously be working on Technology based innovation for increased societal security and resilience. *Second*: to strengthen the impacts, we will focus on three overarching themes that are rooted from the Total Preparedness concept, which is then linked to three emerging themes: Preparedness and Cyber Resilience, Climate Crisis and resilience and AI and Technology Support.

Figure 3 CIEM Thematic Areas

international academic forums related to crisis management and information systems is quite strong. CIEM has a strong track record for contributing to societal impact at the local, regional and national level.

CIEM is well positioned to enhance its global impact by engaging with key international organizations that shape policy, standards, and practice in disaster risk reduction and emergency management. This involves participation in global arenas such as the United Nations Office for Disaster Risk Reduction (UNDRR), the Global Initiative on Resilience to Natural Hazards through AI Solutions Working Group under the International Telecommunication Union (ITU), the United Nations Office for the Coordination of Humanitarian Affairs (UN-OCHA), the EU Civil Protection Mechanism through the Emergency Response Coordination Centre (ERCC), and the European Crisis Management Laboratory (ECML). CIEM plans to visit the ERCC and the ECML this year to learn more about their research infrastructure and methods for training and exercises.

Participation in these organizations will allow CIEM to align its research more closely with global priorities, contribute to international standards and frameworks, and amplify the societal relevance and impact of its multidisciplinary research. One potential contribution is to actively participate in publishing articles in one or more of the relevant White Papers that often have influence in wider area globally, as has been done by one of our researchers to the United Nations Global Assessment Report on Disaster Risk Reduction.⁸

⁸ Thalheimer, L., C. **Webersik** and F. Gaupp (2022). Systemic Risks Emerging from Compound Vulnerabilities. GAR2022 Contributing Paper. Geneva: United Nations Office for Disaster Risk Reduction. Available at <https://www.undrr.org/gar2022-our-world-risk> (CIEM researcher in bold)

While CIEM is well-connected to various national and regional organizations, the National total defence agenda has triggered more national initiatives and networks that could be promising future collaboration partners. We also plan to strengthen existing cooperation with national research institutes such as NORCE, NORSAR, and Vestlandsforskning.

CIEM also wishes to strengthen the connection to different cybersecurity research centres both nationally, such as the Norwegian Centre for Cybersecurity in Critical Sectors (NorCICS) and NorSIS (Norwegian Center for Information Security), and in the Nordic countries.

The Samvirkerom (Joint Operations Room) at the Kristiansand campus was established in 2024 and taken into active use in 2025. It is used for decision-making training, scenario-based exercises, and crisis simulations supported by advanced technologies. Feedback from invited partners, along with the current level of utilization, indicates that the Samvirkerom is an attractive and effective arena for education, dissemination, and research activities. It has already proven to be a valuable resource for both the centre and its partners.

CIEM 2027-2029 high-level KPIs given further strategic funding

- Take a leading role in establishing a national research infrastructure for technology-supported crisis management (TEKRI), with the CIEM Joint Operations Room as a core hub. Continue to upgrade technologies for supporting groundbreaking research and become the “go-to” arena for regional actors for best-practice training/simulation/evaluation in exercise settings.
- Explore the feasibility of coordinating a national annual full scale emergency preparedness exercise. Involving relevant stakeholders spanning from different student groups to relevant preparedness actors. Tentatively named: Øvelse Sør (Exercise South), this exercise will be modelled after the well-established Øvelse Nord at Nord University.
- Exploit the recent upswing in the available national funding within our research themes to increase overall external funding. Leveraging active partnerships with strong academic and stakeholder collaborators to join strong consortiums or taking the lead on coordinating proposals that align with key CIEM topics.
- Partnering or coordinating a proposal for the Research Council’s major new funding line: Centre for Defence capability, Security and Preparedness.
- Educate two PhDs on topics related to Cyber security and AI and climate adaption, based on strategic funding.
- Strengthen the link with practitioners including civil-military relations
- Develop plans building on our strengths for further crisis management education in line with national strategic needs, institutional strategies, and taking into account the competitive landscape for studies already established within Norway on related themes.

The centre has benefited significantly from internal UiA strategic funding, which has enabled continuity and focus on its research activities. The centre uses internal strategic funding in a targeted and proactive manner to reinforce its external funding strategy. In particular, this funding enables co-financing of proposal development, fosters sustained collaboration and anchoring around major funding calls, and incentivizes productive researchers with strong publication trajectories. The internal funding is also used to support gender balance and inclusion by assisting female researchers, and to co-fund PhD and postdoctoral positions when external grants do not allow for full financing. At the same time, this level of capacity pinpoints the importance of internal strategic funding for further strengthening the centre’s ability to attract external funding, in order to enhance long-term sustainability and research impact.

In brief, UiA strategic funding enables continuity and coherence in research activities and supports the gradual build-up of competence, infrastructure, and organisational maturity. The funding serves as leverage, strengthening the centre’s competitiveness and enabling coordination capacity for participation in large-scale national and European research programmes. Moreover, the support enhances the centre’s sustainability by reducing vulnerability to fluctuations in external funding cycles.

Continued funding is critically important to consolidate the results achieved to date and to fully realize CIEM’s long-term ambitions. Prolongation of funding would provide the necessary stability to sustain research capacity, maintain momentum in interdisciplinary collaboration, and translate ongoing activities into lasting scientific and societal impact.

1. Achieving Nordic Post-Covid Resilience

NORDFORSK

2022

Application nr. 137826

Achieving Nordic Post-Covid Resilience

Grade: 4

1 = Poor; 2 = Weak; 3 = Fair; 4 = Good; 5 = Very good; 6 = Excellent; 7 = Outstanding

Contribution to call aims

The extent to which the proposed research is relevant to the aims of the call

The proposal aims to apply a systemic risk approach to the management of the Covid-19 pandemic in three countries (Sweden, Norway and Denmark) in order to identify what the authors call "potent" risks that are responsible for the occurrence of multiple other risks.

What is not clear in the project, though, is how the application of this framework to the three countries will draw lessons from their handling of the pandemic. Indeed, as is stated in WP2: "WP2 will analyse how COVID-19 preparedness and response should have (sic) been if they had been conceived as frameworks for systemic risk". The goal is to come up with an "ideal" trajectory rather than what actually took place in the three countries. As the authors provide little other information on this WP2, which is key in the proposal, we are left to understand that this will be more of a theoretical exercise than one based on actual situations observed in the three countries.

Accordingly, although the proposal purports to reinforce resilience in the Nordic countries against future pandemics, it is very hard to see how this will not remain a purely theoretical exercise.

The main strength of the project lies in the recruitment of experts from a range of domains in the three countries. These experts will participate in the workshops and identify the risks that will feed in an algorithm, Strategyfinder. This will provide useful inputs and also turn these experts into "champions" of the methodology and systemic risk approach after the project ends. In this, the project is innovative and answers one of the call's aims, stakeholder involvement.

Scientific quality

- **Clarity and relevance of objectives, research questions/hypothesis, and project description**
- **Soundness and credibility of concept and methodology**
- **Potential to develop new knowledge beyond current state-of-the-art research**
- **Ethical considerations and how these will be handled**
- **Consideration and integration of gender perspectives, where relevant**
- **Expected research outcomes, societal relevance, and potential for impact**

The proposal states an ambitious aim of developing a resilience process and makes a convincing case for the need to take systemic risk into consideration. In order to achieve this aim, the proposal could have made a clearer case for how its approach differs qualitatively from existing risk management and preparedness response existing across the region and what pathways it might follow in order to ensure that their approach is taken up to strengthen its case study countries' approach to resilience through a focus on systemic risk. This could include a recognition of the bottlenecks to integrating systemic complexity as well as acknowledging existing conceptual critiques to 'resilience'.

The proposal rests on a system risk perspective, which the authors claim to be ground-breaking and supposedly effective in preparing for future risks. They provide little evidence, though, that such an approach can make a difference in fostering resilience. There is also little evidence that addressing the most "potent" risks can avoid the emergence of many other risks. The authors are right to point out the systemic nature of many risks. But they tend to adopt a very mechanical approach, the algorithm they use drawing complex relationships and "vicious circles" between events without any human intervention in the process. Yet, we know from the literature that risks do not exist per se, waiting to be identified. They are the results of multiple decisions and interactions, which the proposal fails to take into consideration.

Strategyfinder, the algorithm used to map out risks and identify the most potent ones, also resembles a black box. We know very little about the parameters used. A key role is devolved to the experts who feed this tool, but how are these experts' opinions weighed and assessed? It is also not clear what type of data these experts actually bring in, what questions they are asked, what is required of them. The concept and methodology would be more credible if the project would build-in a check on the validity and reliability of it all. Much seems to depend on the selection and input of experts. Would another set of experts result in completely different outcomes? Does the project control for that possibility? How valid and reliable are the outcomes of the expert workshops then if we do not know how robust the findings are?

As for the proposal's impact, the authors claim to improve both specified and general resilience. It's not clear though as to how exactly this will be achieved, other than through the work undertaken with the experts. Once again, the proposal suffers from a very mechanistic approach to risks, which pushes aside social and political dimensions.

Nordic added value

- **Potential to create benefits for the Nordic research environments through the research collaboration (achieving necessary critical mass, enhancing cost-effectiveness by sharing data and research infrastructure, mobility, competence building, enhancing scientific excellence, promoting new innovations and patents, building on unique Nordic strengths, phenomena or data)**
- **Complementarity of contributions from participating research environments/institutions**
- **Potential to create benefits for the Nordic societies (providing a useful knowledge base for citizens, policymakers, practitioners and other actors to create societal impact, addressing needs that are unique to the Nordic countries)**

The proposal offers great potential added value to Nordic societies, the approach could really help political executives and agencies/centers of expertise to grasp the potential cascading propagation of risks in several sectors of society by consulting experts representing those different sectors. It less strongly explains how it will leverage the comparative experience and lessons from the different Nordic countries and their diverging outcomes.

The three institutions have already worked together, they each have their own areas of expertise, which are complementary. They also have links with institutions in the other Nordic countries, thus providing opportunities for exchanges and collaborations. The proposal mentions the fact that the systemic nature of risks also implies that they cross boundaries, but the authors reflect very little on what this actually means for a specific Nordic approach to risks. The three countries share many traits, as the authors suggest, and they are closely connected, but their relations with other parts of the world vary greatly.

Quality of the research team

- **Experience, expertise, and merits in relation to the proposed research**
- **Complementarity of the participants and the extent to which the consortium as a whole brings together the necessary expertise**
- **Gender balance or appropriateness of plans to achieve a gender balance**

The research team has a good level of experience on these topics and a good publication record. They are complementary in their expertise.

There is an issue of gender imbalance, which the team leader aims to resolve through greater attention paid to gender biases in data collection and analysis. This seems an important way to address the lack of female researchers in the project.

Feasibility

- **Quality and effectiveness of the work plan, including the extent to which resources are assigned in line with the objectives and deliverables**
- **Appropriateness of the management structures and procedures, including risk, and innovation management**
- **Appropriateness of the allocation of tasks**

The work plan seems feasible, the proposal underpins the existence of some slack which should allow the project to move forward as planned even if some difficulties arise. Tasks are clearly laid out. The management structure seems appropriate.

The works packages are elaborate and well-explained, forming a coherent set that build on each other. WP 1 is clear and feasible but does not firmly address a potential validity and reliability problem the whole approach is as good as the input provided by the experts, so how will the project control for that? WP2 aims to learn about both the Nordic covid response (and how it could have been, simulating alternative choices and outcomes) and about the use of the software, but all with benefit of hindsight - we now know which risks were most potent and which cycles were most vicious and which interventions worked. But what if we face the same uncertainty of 2020 again? The WP2 should build in guarantees that it will only use the knowledge and estimates at the time in its simulation, otherwise it will distort the results.

There is the question of how the experts who are recruited will accept to participate in the project from beginning to end, since this requires an important amount of time and energy on their part. What happens if some drop out? Will they be paid to participate in the workshops?

Communication and knowledge exchange

- **Appropriateness of plans for stakeholder involvement**
- **Quality of plans for knowledge exchange and communication, including the extent to which such activities align with project objectives**
- **Appropriateness of plans to make research data and results openly available in accordance with NordForsk's policy on Open Access**

The main strength of the project is the involvement of groups of experts, who will provide information and also gain insights and methods from the workshops that they will be able to use afterward. However, it is one thing for experts to participate in a workshop and another to consider how knowledge that is available to them can be integrated in existing institutional structures to fulfil the very ambitious aim of the project.

The other forms of communication are more usual, but convincingly laid out.

The proposal has a clear strategy of open science.

Concluding comments to support the overall grade

An interesting, ambitious proposal that could have benefited from more clarity on methods on how ambitious aim of developing new approach to resilience would be integrated into existing preparedness planning.

The proposal addresses a very important issue, the systemic nature of risks, and proposes to study them using a sophisticated software, fed by expert knowledge. The method is interesting but raises many issues regarding in particular the identification of risks and a very mechanistic representation of systemic risks. The proposal rests on a promise that such an approach can improve resilience, but neither provides evidence of this, nor explains how resilience can actually be measured. The proposal relies on a definition of risk that does not take into account their social and political nature. It is hard to see what the overall impact of the proposal will be, apart from the training of experts.

2. INFORMED: Risk assessment frameworks for emerging technologies and digital transformation in emergency management

Research Council of Norway

2022

Project assessment – Summary of marks and the administration's assessment of the relevance criterion

Project number: 336321
Project title: Risk assessment frameworks for emerging technologies and digital transformation in emergency management (INFORMED)

	Assessment criterion	Mark
1	Excellence	5
2	Impact	4
3	Implementation	5
4	Relevance to the call for proposals 6 Søknaden svarer svært godt på utlysningens tematiske prioriteringer, særlig innenfor samfunnssikkerhet. Søknaden svarer også svært godt på kravene til samarbeidspartnere i prosjektet og kompetansebygging i forskningsmiljøene.	6
	General mark*	5

Scale of marks: 7, 6, 5, 4, 3, 2, 1 (7 is best)

*) The general mark is a measure of how well the project proposal fulfils the intentions and purposes of the relevant type of grant (application type) based on consideration of the various criteria.
A general mark of 3 or lower indicates that the project has a fundamental weakness which is noted as a mark of 3, 2, 1 or C given for least one of the criteria. "Relevance to the call for proposals" is defined as "not assessed" if the grant application falls below the threshold set for a complete administrative review of the grant applications.

The marks form part of the basis for the review of grant applications in connection with the final decision-making process.

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See Regulations on Impartiality and Confidence in the Research Council of Norway.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for the Research Council of Norway. See Guidelines for referees/panels who assess applications for the Research Council of Norway.	Yes
- I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence	5
Impact	4
Implementation	5

Criteria

Excellence

.

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.
 - Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.
- Appropriate consideration of interdisciplinary approaches.
- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.
 - The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

Overall the panel considers this proposal as very good in terms of research and focus. It is ambitious since it addresses multiple scenarios. It addresses inter-agency collaboration in crisis management through the lens of three perspectives: risk assessment, SA and cybersecurity culture. In addition, these lenses are used to study technologies in three different scenarios. The concept of universal design is interesting and promising. The attention to constraining elements (referred to as SA demons) and human errors show at the same time that the applicants are not merely believers of such a design, but that they will pay attention to the difficulties in application. However, the concepts are not very well described and developed. What is in particular a concern is: 1) a lack of theoretical embeddedness and an overall framework; 2) the way the various scenarios will be interconnected, integrated and/or compared. In sum, there is potential for developing new knowledge, but there is a need for more conceptual development.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Impact

.

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

There is a huge potential for creating concrete impact, given the strength of the consortium (academics and practitioners). The focus on IT systems in different scenario's is very promising for creating impact. However, how the impact will actually be achieved remains unclear. The applicants don't provide a clear pathway through which they show how the results of the project are translated in tangible new practices in user-organizations and/or in societal change. Also, there could have also been more on attempts to bring the different research sites together in terms of a conversation across WPs. In addition, while they state that learning is difficult, they don't make their solutions (to create impact in this regard) concrete.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Implementation

.

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The proposal has a very good implementation plan, which is not just provided in the implementation section, but throughout the whole document and in particular in the Work Package description. Tasks and responsibilities are clearly listed and an overview is provided in a GANNTT chart. However, while the proposal has a very strong implementation plan and the proposed collaboration between the partners in the consortium are strong and promising, what exactly the contribution is, is not always sufficiently spelt out. The lack of sound theoretical embeddedness makes it difficult to see how the various components of the project (and hence the individual partners' contribution) will be implemented in a coherent and comprehensive manner. But the project leadership is strong which will ensure a sound implementation of the project.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Special points to consider

Comments to special points to consider

3. Research infrastructure for technology-supported crisis management

Research Council of Norway

2023

De strategiske administrative panelenes vurdering

Prosjektnummer: 350315

Prosjekttittel: Research infrastructure for technology-supported crisis management

Vurderingskriterium	Karakter
Spesielle føringer i utlysningen <i>I hvilken grad prosjektet tilfredsstiller spesielle prioriteringer i utlysningen ut over det som er nevnt under. Prioriteringene vil være tydeliggjort i utlysningene.</i>	A
Det er ingen spesielle føringer i 2023-utlysningen utover det som vurderes i kriteriene under, og dette punktet er derfor ikke vurdert.	
Nasjonal viktighet • Vurderes ut fra i hvilken grad infrastrukturen: - har bred nasjonal interesse. - finnes kun på ett eller få steder i landet. - støtter opp om nasjonalt prioriterte forskningsområder og strategier.	A
Det søkes om midler til forprosjektet Research infrastructure for technology-supported crisis management ved Universitetet i Agder. Høgskolen i Innlandet, Universitetet i Sørøst-Norge og Nord Universitet er samarbeidspartnere. Målet er å utvikle et konsept for en nasjonal forskningsinfrastruktur som støtter forsknings- og innovasjonssamarbeid for teknologistøttet, tverrsektoriell krisehåndtering. Konseptet inkluderer laber og treningsfasiliteter hos samarbeidspartnerne, utstyrt med nyeste teknologi for kriseberedskap og respons for samfunnssikkerhetsaktører fra ulike sektorer, samt en e-infrastruktur for deling av forskningsdata fra øvelser og virkelige kriser. Slik formålet er beskrevet i søknaden, støtter forprosjektet godt oppunder nasjonale prioriteringer og kunnskapsbehov i Norsk veikart for forskningsinfrastruktur 2023. Innenfor krisehåndtering og beredskap fremheves viktigheten av å ha tilgang til data på tvers av sektorer. Søker beskriver hvordan infrastrukturen vil gi forskning på hvordan krisehåndteringen kan forbedres gjennom innovativ bruk av teknologi i trening og øvelser, og på hvordan samfunnssikkerhetsaktører kan samarbeide effektivt i komplekse krisesituasjoner ved hjelp av teknologi (inkludert KI) for å samle, analysere og dele informasjon. Infrastrukturen kan bidra til forskning av høy internasjonal kvalitet, nasjonalt samarbeid og arbeidsdeling, internasjonalt samarbeid og FAIR forskningsdata. Infrastrukturen støtter videre opp under prioriteringer og kunnskapsbehov beskrevet i Langtidsplanen for forskning og høyere utdanning 2023-2032, spesielt under Samfunnssikkerhet og beredskap, og Forskningsrådets porteføljeplan for Demokrati, styring og fornyelse og NOU 2023:17 Nå er det alvor fra Totalberedskapskommisjonen.	
Samarbeid og arbeidsdeling	A

De strategiske administrative panelenes vurdering

Prosjektnummer: 350315

Prosjekttittel: Research infrastructure for technology-supported crisis management

• <i>Vurderes ut fra i hvilken grad prosjektet:</i> - <i>bidrar til en hensiktsmessig nasjonal arbeidsdeling.</i> - <i>vil utnytte den nasjonale forskningskompetansen.</i> - <i>fremmer nasjonalt samarbeid om investeringer og drift.</i> • <i>Der det er relevant vurderes i hvilken grad prosjektet:</i> - <i>samarbeider med annen relevant nasjonal og/eller internasjonal infrastruktur.</i>	
Konsortiet vurderes å ha den relevante og nødvendige ekspertisen for å gjennomføre prosjektet. Alle partnere har etablert treningsfasiliteter/laber som infrastrukturen skal bygge på. Til sammen dekker partnerne ulike områder innenfor krisehåndtering, som krisehåndtering i Arktis, sivilt-militært samarbeid, maritim sikkerhet, og samarbeid med kommuner og "first responders". Det framgår også at de har planer om å involvere aktører i Sverige og andre nordiske land, inkludert aktører de har et etablert samarbeid med.	
Institusjonell forankring • <i>Vurderes ut fra hvor godt prosjektet er forankret institusjonelt og hvilken betydning det har for prosjektansvarlig og samarbeidspartneres strategiske mål og planer.</i>	A
Basert på søknad og vedlagte intensjons- og støttebrev vurderes forprosjektet som godt forankret institusjonelt. Det støtter opp under Universitetet i Agders, Høgskolen i Innlandets, Universitetet i Sørøst-Norges og Nord Universitets strategiske mål og planer.	
Nytte for samfunnet • <i>I hvilken grad infrastrukturen bidrar til:</i> - <i>innovasjon og/eller verdiskapning i næringsliv og/eller offentlig sektor, der dette er relevant.</i> - <i>økt kunnskap/kompetanse av betydning for samfunnet.</i>	A
Formålet med infrastrukturen vurderes som nasjonalt viktig og relevant, med stor samfunnsnytte. Ifølge ekspertpanelet kan det gjøre Norge internasjonalt ledende på teknologistøttet krisehåndtering. Prosjektet kan knytte sammen delvis isolerte kunnskapsinstitusjoner og forskere. Det vil være svært nyttig for alle norske aktører innen krisehåndtering og beredskap, både kommuner, sivile og militære enheter, teknologiselskaper og frivillige organisasjoner. Det vil også fremme samarbeid mellom aktører på tvers av regioner.	
Gjennomføring og organisering • <i>I hvilken grad:</i> - <i>prosjektet har en økonomisk robust driftsmodell for infrastrukturen.</i> - <i>det foreligger en gjennomtenkt og realistisk finansieringsplan for etablering/oppgradering.</i> - <i>det foreligger gode planer for å gjøre infrastrukturen tilgjengelig for relevante brukere utenfor vertsinstitusjonene.</i> - <i>det er god koordinering og hensiktsmessig ansvarsdeling og forpliktelser med hensyn</i>	A

De strategiske administrative panelenes vurdering

Prosjektnummer: 350315

Prosjekttittel: Research infrastructure for technology-supported crisis management

<i>til etablering, oppgradering og drift i prosjektet.</i> <i>o For søknader som søker om oppgradering/videreutvikling vurderes måloppnåelsen i tidligere faser finansiert av Forskningsrådet.</i> <i>o For søknader som gjelder langsiktig grunnstøtte til drift vil behov for støtte vil vurderes på grunnlag av søkers besvarelse i særskilt vedlegg.</i> <i>- prosjektet er modent for gjennomføring.</i> <i>- det er mulig å legge opp til en trinnvis oppbygning og om budsjettrammen kan justeres ned gitt at målene til prosjektet opprettholdes.</i>	
Søker presenterer klare og realistiske planer for organisering og gjennomføring av forprosjektet, med et gjennomtenkt budsjett. I forprosjektet skal det utvikles et konsept for forskningsinfrastrukturen, hvor design og implementering bør detaljeres, inkludert hvordan sluttbrukere involveres i prosjektet.	
Samlet vurdering fra administrativt panel <i>Her gjøres det en samlet vurdering av søknaden basert på ekspertvurderingen og de administrative kriteriene. Det administrative panelet trekker inn styrker og svakheter fra ekspertpanelenes vurderinger og kriteriene som er vurdert av det administrative panelet.</i>	A
Dette er en god søknad som har fått 6 på forskningskvalitet og virkninger og effekter, og 5 på implementering, av ekspertpanelet. Infrastrukturen vurderes å ha nasjonal viktighet, interesse og relevans, og den bygger opp under nasjonale prioriteringer og kunnskapsbehov. Ifølge ekspertpanelet vil infrastrukturen ha stor nasjonal nytteverdi for samfunnssikkerhetsarbeidet og beredskapsaktører, og kan gjøre Norge til en pioner på forskningsfeltet. Forprosjektets organisering og ledelse er godt gjennomtenkt, og tilknyttet dekkende og internasjonalt anerkjent kompetanse og ekspertise.	

Karakterskala: A, B, C (A er best)

Assessment of grant application submitted to the Research Council of Norway

Grant application

Project number	350315
Project title	Research infrastructure for technology-supported crisis management
Project manager	Munkvold, Bjørn Erik
Project owner	FAKULTET FOR SAMFUNNSVITENSKAP
Application type	Research Infrastructure / Support for Establishment/Upgrades of Research Infrastructure of National Importance
Topic	Democracy, power and governance Digitalisation and use of ICT
Programme/Activity	Nasj.sats. forskn.infrastrukt
Case officer	Kirsti Solberg Landsverk

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See Regulations on Impartiality and Confidence in the Research Council of Norway.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for the Research Council of Norway. See Guidelines for referees/panels who assess applications for the Research Council of Norway.	Yes
- I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence	6
Impact	6
Implementation	5
Overall assessment of the referee/panel	6

Criteria

Excellence

.

The extent to which the infrastructure will contribute to scientific renewal and/or scope

- The extent to which the infrastructure will help to elevate Norwegian research to a top international level;
- The extent to which the infrastructure provides services that meet the needs of relevant research communities or research areas.

The quality and uniqueness of the infrastructure

- The extent to which the infrastructure is "state-of-the-art" – the best technological solutions are being chosen;
- How the infrastructure is aligned with the landscape of existing, relevant infrastructures, and the extent to which the proposal has been coordinated with these.

The proposed pre-project is highly relevant as it promises an infrastructure of institutes (with knowledgeable members and expertise) that can contribute to the response, mitigation, recovery and preparation of crises, unforeseen events and large scale incidents. The types of crises could have been addressed more explicitly, but the infrastructure has great potential to address grand challenges in (Norwegian) society. Various technologies previously developed in (European) projects are not sufficiently tested and evaluated yet and therefore, the proposed infrastructure has the potential to put Norway at the forefront of international research efforts. While not enough detail is provided about the specific crisis nor the information technologies, the applicants could have mentioned certain use-cases to show how the research infrastructure can actually contribute to an improved crisis management and response by means of technologies.

Selected mark : 6 - Excellent

The proposal successfully addresses all relevant aspects of the criterion. Only minor shortcomings are present.

Impact

.

Potential impacts

- The extent to which the infrastructure will have a potential impact on:
 - the research system;
 - innovation;
 - society.

Accessibility and utilisation

- The extent to which:
 - the infrastructure will be made accessible to all relevant users;
 - there will be dissemination and communication activities targeted towards all relevant stakeholders/users;
 - the infrastructure facilitates user participation from research communities, the business sector, public administration and other relevant contributors.

It is evident that the research infrastructure envisaged will have a significant impact on the implementation of research activities in the domain of Crisis Management in Norway. The proposed research infrastructure has the potential to connect otherwise quasi isolated knowledge institutes and researchers. More detail could have been provided on the stakeholders/practitioner organizations who can make use of the infrastructure: (how) are they allowed to get access? In similar vein: although PhD students are mentioned as a potential user group, it is not always clear how they can get access to the data in the infrastructure? When it comes to the data sharing more detail on data protection when shared among stakeholders (ethical issue) could have been addressed in more detail.

Selected mark : 6 - Excellent

The proposal successfully addresses all relevant aspects of the criterion. Only minor shortcomings are present.

Implementation

Quality of project management and organisation

- The extent to which:
 - the project manager has the necessary qualifications to lead the project;
 - the project group has the relevant expertise and resources needed to establish, operate and offer services to relevant user groups;
 - the project organisation is suitable for the infrastructure.

Plans for establishment/upgrade and operation of the infrastructure

- The extent to which:
 - there is a carefully weighed, realistic plan for establishing/upgrading the infrastructure, including breakdown into work packages/sub-projects, milestones, deliverables, costs and resource needs;
 - there are plans for how to make optimal use of the infrastructure;
 - there are well thought out plans for how the data that the infrastructure generates/manages are to be structured, stored and published or otherwise made accessible;
 - there is a risk assessment and proposed measures for dealing with any high-risk incidents.

- Applications proposing the establishment/upgrade of a Norwegian node of an international research infrastructure collaboration will be assessed on the extent to which the role distribution between the Norwegian partner (node) and the international partners is clearly defined and suitable (based on the information provided by the applicant in a special attachment).

Assessment of technical solutions

- The extent to which the proposed technical solutions are sufficiently mature to warrant establishment of the infrastructure;
- Projects involving independent development of equipment and technical solutions will also be assessed as to:
 - whether it is documented that no available solutions exist in the market, which justify the independent development;
 - whether the underlying methodology/technology has been demonstrated as functional in a relevant environment (Technology Readiness Level 6 as defined in the European Commission).

Overall the quality of the implementation is good. However, providing details about implementation process could have helped the applicants to be more precise about how the infrastructure will come into being and what the concrete outcomes of the pre-project will be. In other words, the methodology of designing the infrastructure will be shaped and implemented is missing. For example, questions such as where are the (data) resources located, who will get access to the data and under what criteria, etc. are not clearly answered. The proposed four workshops to deal with these matters may be not enough. In sum: the research team is very experienced in implementing project outcomes, but a clear feasibility study of how the proposed infrastructure will be implemented is not adequately addressed.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Overall assessment of the referee/panel

Overall assessment of the referee/panel based, on the criteria Excellence, Impact and Implementation.

This is a high-quality pre-project proposal which can potentially provide significant benefits to all Crisis Management stakeholders in Norway, and can also potentially elevate Norway to the status of a nation conducting pioneering research in this domain. The team of experts has exceptional qualities and is a palace of expertise; well recognized in the international community of crisis management researchers. The critical point in this research infrastructure concept is the involvement of end-users. The applicants should ensure that stakeholders/practitioners will be strongly engaged to the project and its research outputs. In addition, an adequate description of the implementation methodology is missing. To overcome such issues, the applicants may also consider to include a prototype or pilot (and 'test' it during a workshop), which could have made the characteristics of the infrastructure more explicit.

Selected mark : 6 - Excellent

The proposal successfully addresses all relevant aspects of the criterion. Only minor shortcomings are present.

Special points to consider

Comments to special points to consider

4. ARTEMIS: Advanced Support Solution for Cybersecurity Readiness and Solutions and Resilient Operations for Complex Critical Cyber Systems and Infrastructures

Abstract:

Society and economy are strongly dependent on Critical Cyber Infrastructures (CCIs), where is any short disruption in CCI operations would lead to immediate, profound, and serious social, economic, and financial consequences. Thus, CCIs' protection and resilience remain among the top priorities, as outlined in the EU Security Union Strategy. ARTEMIS-INFRA will bring 4 complementary pilot demonstrators introducing innovative solutions to (i) strongly support resilient operations and cybersecurity readiness for stakeholders operating critical infrastructures towards gaining cyber situational awareness, and (ii) highly facilitate sound cyber threat intelligence enabling effective response to detected security incidents. ARTEMIS-INFRA brings together an interdisciplinary consortium of highly experienced partners with complementary profiles (i.e. universities, research institutions, end-users, technology providers, SMEs.). The project outcomes will provide foundational insights to regulatory and legislative perspective addressing security and protection of heterogeneous infrastructures and cross-border scenarios. Finally, the long-term impact lays in the network of facilities for training and technology testing supporting future requirements for developing policies, procedures and technology integration for enhanced cyber preparedness and resilience.

Evaluation Summary Report

Evaluation Result**Total score: 10.50 (Threshold: 10)** Associated with document Ref. Ares(2023)1383154 - 24/02/2023**Criterion 1 - Excellence**Score: **3.00** (Threshold: 3/5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- **Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art.**
- **Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.**

The proposal addresses increased cybersecurity which is relevant to the work programme. It aims to develop innovative solutions to secure and hence ensure resilient Critical Cyber Infrastructures.

The objectives are clear and pertinent to the topic. The ambition and the proposed advances are not sufficiently well elaborated. KPIs are provided but the baselines are not adequately defined and the way in which some KPIs will be measured is not clearly articulated. For example, KPI5 95% improvement in encrypted communication does not adequately reference the type of improvement that is expected.

The proposal insufficiently describes the current state of the art and thus does not adequately elaborate how the project will go beyond that, which is a weakness.

The proposed methodology is sound and the concepts are mostly well elaborated and relevant.

The proposed work makes extensive use of artificial intelligence. The proposal provides adequate detail on the robustness of the approach.

Open science practices are adequately described with an appropriate data management plan.

The proposal has a credible interdisciplinary approach.

Criterion 2 - ImpactScore: **3.00** (Threshold: 3/5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- **Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project.**
- **Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.**

The economic and market impacts are described in detail, however, the scientific impacts are rather general and are not convincing. The Destination impacts are insufficiently described and fail to adequately justify the links between expected outcomes from the call, the pilots and the introduced notion of "need". Furthermore, the pathways to achieve the expected outcomes and impact lack sufficient justification. For example, the link between objectives and outcomes is insufficiently well elaborated.

The proposed dissemination and communication measures are of reasonable quality. The list of venues, publication methods, number of workshops and fora included in the dissemination and communication plan are suitable for the scale of the project and achievable within the specified timeframe. All the relevant target groups have been identified and specific activities have been proposed for each target group.

Exploitation plans are in general well thought out and have been properly justified. The individual exploitation plans have not been sufficiently well elaborated although the general plans can fit for multiple partners.

The management of intellectual property is outlined properly and the management of joint ownership is addressed in detail.

Criterion 3 - Quality and efficiency of the implementation

Score: **4.50** (Threshold: 3/5.00 , Weight: -)

 Associated with document Ref. Ares(2023)1383154 - 24/02/2023

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- **Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.**
- **Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.**

The work plan is effective and of good quality. The proposed deliverables and milestones match the objectives and expected outcomes outlined in the proposal.

The work plan has adequately identified risks, however, the mitigation for certain risks is not convincing. For example, the management of risk 7, the challenge of obtaining security clearances is inadequate. The risk management plan will be delivered in month 13, the timing of which is not adequately justified.

The resource allocation to work packages is generally appropriate and in line with the objectives.

The role of each participant is clearly defined and the effort is allocated properly across partners.

The consortium as a whole brings together the necessary expertise.

Scope of the application

Status: **Yes**

Comments (in case the proposal is out of scope)

Not provided

Exceptional funding

A third country participant/international organisation not listed in [the General Annex to the Main Work Programme](#) may exceptionally receive funding if their participation is essential for carrying out the project (for instance due to outstanding expertise, access to unique know-how, access to research infrastructure, access to particular geographical environments, possibility to involve key partners in emerging markets, access to data, etc.). (For more information, see the [HE programme guide](#))

Please list the concerned applicants and requested grant amount and explain the reasons why.

Based on the information provided, the following participants should receive exceptional funding:

Not provided

Based on the information provided, the following participants should NOT receive exceptional funding:

Not provided

Use of human embryonic stem cells (hESC)

Status: **No**

If YES, please state whether the use of hESC is, or is not, in your opinion, necessary to achieve the scientific objectives of the proposal and the reasons why. Alternatively, please state if it cannot be assessed whether the use of hESC is necessary or not, because of a lack of information.

Not provided

Use of human embryos

Status: **No**

If YES, please explain how the human embryos will be used in the project.

Not provided

 Associated with document Ref. Ares(2023)1383154 - 24/02/2023

Activities excluded from funding

Status: **No**

If YES, please explain.

Not provided

Do no significant harm principle

Status: **Yes**

If Partially/No/Cannot be assessed please explain

Not provided

Exclusive focus on civil applications

Status: **Yes**

If NO, please explain.

Not provided

Artificial Intelligence

Status: **Yes**

If YES, the technical robustness of the proposed system must be evaluated under the appropriate criterion.

Abstract:

The objective of ATHENA is to revolutionise disaster resilience and crisis management by integrating heterogeneous unmanned ground vehicles (UGVs) with different levels of autonomy, teaming and ethics into the operational ecosystems of first responders. The project's overarching scope includes the dynamic integration of UGV technologies based on their levels of autonomy, collaboration, and ethical standards, with the goal of enhancing the efficiency and safety of first responders in routine and non-routine disaster response scenarios. It encompasses the development of a prospective catalogue and comprehensive training to foster broad acceptance of these technologies, a robust integration framework for operational alignment, and the promotion of ethical conduct. The project seeks to create a harmonious partnership between first responders and UGV technologies, ultimately strengthening their preparedness, efficiency, and ethical standards in the face of challenging disaster scenarios.

Evaluation Summary Report

Evaluation Result

Total score: 12.00 (Threshold: 10)

Criterion 1 - Excellence

Score: **4.00** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art.
 - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

The objectives of ATHENA (addressing topic DRS-01-05) are clear, sound, detailed, and pertinent to the description in the work programme. Key performance indicators (KPIs) are very realistic. The combination of the targeted results is very ambitious and a relevant progress beyond the state of the art from both the technological and the systemic points of view. In particular, the proposed integration of UGV platforms in a federated system will be of great importance for Europe, with a credible attention to widening the use of robotics by first responders for faster and better work. However, the proposal does not sufficiently address the concrete technologies to achieve the envisioned advances, and it lacks specific tools to achieve the mentioned goals. This is a shortcoming.

The overall methodology is based on plausible steps. The demonstration protocol is very well designed to ensure that the project will generate the maximum output from the field trials, leading to useful documentation for future work in this field. However, the complementarity of pilot studies to achieve objectives is not properly addressed.

The involvement of first responders and citizens is very well thought and it credibly reinforces the targeted technical solutions. The three demonstrations and the evaluation methodology are well conceived for the project goals. Some of the specific methodologies, like those for the tactile layer, sensor selection and processing, distributed data fusion, human-robot teaming and immersive training modules are not sufficiently detailed. This is a shortcoming.

The interdisciplinary of the approach is adequate with proper integration of Social Sciences and Humanities (SSH) disciplines. End users are fully involved in the project. Engagement of civil society is addressed very well using different and proper ways of engagement.

Links to former EU projects are presented. However, the collaboration with running projects are not fully elaborated. This is a minor shortcoming.

Gender dimension is appropriately discussed.

Open science practises and integration of social sciences are addressed well, because the proposal involves all stakeholders for classification of UGVs for disaster response and for analysing the acceptance of these technologies.

Data management is well planned. Ethical standards are discussed in detail.

The robustness of artificial intelligence components is adequately addressed.

Criterion 2 - Impact

Score: **4.50** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project.
 - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.

The proposal adequately presents and addresses the expected outcomes, which correspond very well to the description in the work programme. The pathways are very credible and supported by proper and measurable KPIs. Barriers and obstacles of the expected outcomes and impacts are analysed very well. Sensible mitigation measures are provided for all the obstacles. However, the proposal does not address enough how the long-term impact will be attained. This is a shortcoming.

Communication and dissemination plans and activities are very well described and detailed, with excellent and measurable KPIs. A clear plan on how to address every target audience is presented. Regional and EU civil protection agencies will also be involved well, which is an added value.

The exploitation plan is drafted with care, it is sound and it well defines exploitation strategies at partner level. However, the commercial exploitation of the results is not fully developed. This is a minor shortcoming.

Criterion 3 - Quality and efficiency of the implementation

Score: **3.50** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

Overall, the work plan is logical. The fact that a specific activity is devoted to the acceptance of UGV technologies by responders and citizens is an added value. Milestones and deliverables are well described and adequate to the project size and scope. The inter-dependencies between work packages and tasks are well planned. Nevertheless, the proposal does not sufficiently justify that the months for demonstration, validation and optimisation will be enough for a proper management of resources by technological partners. Moreover, the proposal does not sufficiently clarify the interdependence between Task 5.3 and deliverable 4.2. All this is a shortcoming. In addition, Task 4.3 is not sufficiently detailed in explaining the mechanical design of UGVs. This is a minor shortcoming.

The risk management plan is sound, with single risks assigned properly to responsible partners and sensible mitigation measures. However, risks and mitigation measures related to technical issues are identified too generically. This is a minor shortcoming.

The capacity and the role of each participant are properly described. The consortium is complementary in terms of expertise in developing innovative solutions and has an excellent network within the community of first responders and other important stakeholders. All partners are very experienced and have the necessary expertise to carry out the assigned activities.

Overall, the resource allocation is adequate to the foreseen activities. However, the allocation of resources on specific technical innovations, e.g., sensors and robots, are not sufficiently clarified. Moreover, the proposal is unclear in reporting the total staff effort, which amounts to different numbers in Table 3.1a and Table 3.1f, and in the presentation of the staff effort per work package, since the numbers reported in Figure 6 are different from those in Table 3.1f. These are minor shortcomings.

The proposal foresees an advisory board for evaluations and exchange of information. However, it does not clarify enough how this board will be activated and motivated to work for the project. This is a minor shortcoming.

Scope of the application

Status: Yes

Comments (in case the proposal is out of scope)

Not provided

Exceptional funding

A third country participant/international organisation not listed in [the General Annex to the Main Work Programme](#) may exceptionally receive funding if their participation is essential for carrying out the project (for instance due to outstanding expertise, access to unique know-how, access to research infrastructure, access to particular geographical environments, possibility to involve key partners in emerging markets, access to data, etc.). (For more information, see the [HE programme guide](#))

Please list the concerned applicants and requested grant amount and explain the reasons why.

Based on the information provided, the following participants should receive exceptional funding:

Not provided

Based on the information provided, the following participants should NOT receive exceptional funding:

Not provided

Use of human embryonic stem cells (hESC)

Status: No

If YES, please state whether the use of hESC is, or is not, in your opinion, necessary to achieve the scientific objectives of the proposal and the reasons why. Alternatively, please state if it cannot be assessed whether the use of hESC is necessary or not, because of a lack of information.

Not provided

Use of human embryos

Status: No

If YES, please explain how the human embryos will be used in the project.

Not provided

Activities excluded from funding

Status: No

 Associated with document Ref. Ares(2024)2079627 - 19/03/2024

If YES, please explain.
Not provided

Do no significant harm principle

Status: Yes

If Partially/No/Cannot be assessed please explain
Not provided

Exclusive focus on civil applications

Status: Yes

If NO, please explain.
Not provided

Artificial Intelligence

Status: Yes

If YES, the technical robustness of the proposed system must be evaluated under the appropriate criterion.

Total:			5,999,644.5		5,999,644	

Abstract:

Ongoing trends of climate change and environmental degradation (CC&ED) have introduced new pressures, with great impacts on human health and health system equity and sustainability. WAARSKU provides policymakers with actionable evidence on preventive and protective actions for vulnerable populations by exploring the social and health effects of CC&ED and its intermediating health system features in an integrated and comprehensive manner. Based on 3 pillars, WAARSKU will first contribute to evidence creation by attributing CC&ED effects on health and health system capacity with a focus on vulnerable populations. Secondly, the WAARSKU-environmental health surveillance system (EHSS) will be developed and deployed using evidence on identified planetary health, vulnerability, and resilient health system indicators and incorporated into existing monitoring and information systems of five pilot countries with different environmental-socioeconomic-political settings. The Planetary Health Lens (Myers, 2020) provides the key organizing framework that will be encoded in the novel predictive indicators and assessment tools. On-the-ground experience from the pilot countries is fully integrated into the project design, providing rich existing data sets, strong potential for targeted acquisition of new data, and inter-country collaborative co-creation and mutual learning that will greatly enhance the robustness of the work. The last pillar will promote a set of activities to maximize future replication and impact of WAARSKU results. The WAARSKU consortium is a multi-disciplinary team of 13 partners from 10 countries including 5 EU (BE, IT, FR, DE, UK) and 3 third countries (AL, NO, ZA), and 2 international organizations (JPN, USA). WAARSKU aims to contribute to resilient, inclusive, and responsive health systems in Europe, South Africa and beyond. WAARSKU-EHSS will be co-developed and validated through 5 pilot countries, to ensure adaptability and transferability of the approach.

Evaluation Summary Report

Evaluation Result

Total score: 10.00 (Threshold: 12)

Criterion 1 - Excellence

Score: **2.50** (Threshold: 4 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art.
 - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

In general, the objectives are good and pertinent to the call topic. The general idea of effective Environmental and Health Surveillance System (EHSS) is good, but the proposal is not fully convincing on the verification measures. The proposal is not sufficiently convincing that it will exert any influence on the existing public health infrastructure, resources and trained workforce onto which everything depends. Furthermore, the proposal is not fully convincing that some of the objectives will be achieved, due to the diversities of the health systems in the pilot countries. Taken together these constitute a shortcoming.

The proposal is overall ambitious. However, there is weak evidence to suggest advances beyond the state of the art, since the proposed activities are generic and rely on existing methods and tools. This is a weakness.

The proposal's R&I novelty is mainly limited to concepts in socio-economic sphere, while the environmental drivers of health are not convincingly taken into account. This is a shortcoming.

The R&I maturity of the proposal is not sufficiently elaborated. For example, in the case of the UK, the proposal intends to work on existing Environmental Public Health Surveillance System (EPHSS), without providing credible significant contribution. This is a shortcoming.

The methodology is not credibly elaborated as the proposal envisages that first it will create the EHSS system and then verify its functionality and effectiveness in five regions with not fully evidently compatible characteristics in terms of environment, socio-economic level, traditions and healthcare systems. This is a shortcoming.

In principle, the proposal intends to apply an interdisciplinary approach. However, the majority of research will concentrate on the socio-economic aspects. The proposal does not sufficiently elaborate on which data will be used for climate modelling and environmental degradation, including pollutants. This is a shortcoming.

The gender dimension in research and innovation content is well balanced, particularly in the research teams and within the stakeholders.

The open science practices are convincingly planned on various stages of project. Open access will be offered to the peer-reviewed papers resulting from the project. Policy makers and science community are expected to have open access of results and publications. However, the proposal is not convincing on the availability of open access to the general population.

The research data management plan is well considered.

Social sciences and humanities are well integrated in the common approach of the different teams.

The proposal does not provide sufficient convincing information to justify the robustness of the AI that is planned to be developed.

Criterion 2 - Impact

Score: **3.50** (Threshold: 4 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project.
 - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.

Overall, the pathways to achieve the project objectives and to generate expected impact are credible, but not sufficiently elaborated. For example, some of the social, economic and scientific impacts cover wide areas and present challenges to be achieved within the project. This is a shortcoming.

The proposal well describes the potential external barriers to obtain expected outcomes and impacts. The proposed measures of their mitigation are credible.

The scale and significance of the proposal is good as it covers a large area and significant number of people potentially impacted by project's results. There is a staged approach by which the desired results are to be replicated from the pilot countries to wider communities. However, the proposal is not fully convincing that a single universal system will be able to satisfy the different particularities of the different countries. This is a shortcoming.

Overall, the communication, dissemination and exploitation plans are credible, covering all the relevant stakeholders with concrete indicators for each category and phase of the project. The proposal convincingly includes adequate target groups to reach different stakeholders with means such as innovation fact sheets, promotional videos, as well as scientific papers, an international community of practice, and an International Advisory Board.

The management of intellectual property is adequately defined. However, it is not sufficiently clear in case of third-countries. This is a minor shortcoming.

An exploitation plan is expected to be carried out by every partner during the course of the project.

Criterion 3 - Quality and efficiency of the implementation

Score: **4.00** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
 - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

The work plan is of good quality, credible and well aligned with the objectives.

Overall, most of the deliverables are well defined and the milestones easily followed, to enable adequate monitoring of the project's progress. However, some of them are not sufficiently clear and their realisation depends of external factors such as policy makers and/or public authorities. This is a minor shortcoming.

The work packages have a logical sequence, and good interaction between them. Tasks, deliverables and milestones are well defined.

The budget and effort resources allocation is appropriate for the planned activities, tasks and deliverables of the project. However, the proposal is not convincing that the resources in terms of effort are sufficient for proper collection and analysis of climate and environmental data. This is a shortcoming.

Risks associated to the project are appropriately identified and the proposed mitigation measures are credible.

The consortium brings together an interdisciplinary and complementary team which covers the different aspects of the project.

The proposal convincingly conveys that the consortium has the necessary expertise in the relevant fields, including social science and health, open science practices and gender aspects.

Social sciences and humanities are properly included.

The proposal is convincing that the partners have access to critical infrastructure. However, it is not fully convincing that there is the necessary access to appropriate data bases, such as those related to environment and climate. This is a minor shortcoming.

The participants within the consortium are complimentary to each other.

The proposal is convincing that the participants have a valid role within the project, and sufficient operational capacity.

The proposal sufficiently includes the necessary industrial/commercial involvement for the exploitation of the results.

Scope of the application

Status: **Yes**

Comments (in case the proposal is out of scope)

Not provided

Exceptional funding

A third country participant/international organisation not listed in [the General Annex to the Main Work Programme](#) may exceptionally receive funding if their participation is essential for carrying out the project (for instance due to outstanding expertise, access to unique know-how, access to research infrastructure, access to particular geographical environments, possibility to involve key partners in emerging markets, access to data, etc.). (For more information, see the [HE programme guide](#))

Please list the concerned applicants and requested grant amount and explain the reasons why.

Based on the information provided, the following participants should receive exceptional funding:

RFF Agder - 350691 - Tilsagn

Prosjekt: Samarbeid for klimatilpasning - Systemintegrasjon
Prosjektnummer: 350691
Prosjektansvarlig: UNIVERSITETET I AGDER
Adm. ansvarlig: Målfrid Tangedal
Prosjektleder: Bjørn Erik Munkvold
Prosjektperiode: 01.02.2024 - 15.12.2024

Vi viser til søknad mottatt 24.11.2023 om tildeling av midler til overnevnte prosjekt. Dette brevet er sendt prosjektansvarlig for søknaden. Det er mottakers ansvar å informere prosjektleder og eventuelt andre som er knyttet til søknaden om vedtaket.

Regionale forskningsfond Agder har gitt en bevilgning til prosjektet med NOK 500 000.

Støtte er gitt under forutsetning av at forskrift om unntak fra notifikasjonsplikt for offentlig støtte § 1, jfr. EØS-avtalens vedlegg XV nr. 1j og artikkel 30-31 og 33-34 i forordning (EF nr. 800/2008), overholdes.

Utbetaling

Signert aksept på betalingsvilkår returneres sekretariatet i Regionale forskningsfond Agder innen 1 måned etter dato på tilsagnsbrevet. Ved manglende retur av signert tilsagnsbrev innen denne fristen, anses prosjektet som ikke startet og tilsagnet frafalles.

75 % av innvilget beløp kan utbetales når:

- «Aksept på betalingsvilkår» (vedlagt) er returnert til sekretariatet.
- Prosjektet har startet.
- Eventuelle betingelser som er satt for prosjektet er oppfylt.
- Utbetalingsanmodning er oversendt til sekretariatet (vedlagt)

Resterende beløp utbetales når sluttrapportering er godkjent.

Øvrige vilkår

- Prosjektansvarlig har ansvaret for ledelse og gjennomføring av prosjektet.
- Skifte av administrativt ansvarlig skal meddeles Regionale forskningsfond Agder skriftlig.

Besøksadresse:
Tordenskjoldsgate 65, Kristiansand
Postadresse:
Postboks 788 Stoa, 4809 Arendal

Telefon:
47354144
E-post:
postmottak@agderfk.no
Stian.Reiersen@agderfk.no

Org.nr.:
921 707 134
Nettsted:
www.rffagder.no

- Skifte av prosjektleder skal godkjennes av Regionale forskningsfond Agder, og CV for ny prosjektleder skal alltid vedlegges søknad om skifte av prosjektleder.
- Endringer i prosjektbeskrivelsen eller forsinkelser ut over 1 måned skal godkjennes av Regionale forskningsfond Agder.
- Tilsagnet er gitt ut fra et kostnadsoverslag som spesifisert i søknaden. Dersom prosjektets totalkostnad er mindre enn budsjettet, vil Regionale forskningsfond Agders andel reduseres slik at den prosentvise andel støtte opprettholdes.
- Dersom det viser seg at prosjektet ikke vil bli realisert ber vi om at dette blir meddelt oss så snart som mulig.

Rapportering

Prosjektet skal rapporteres til Regionale forskningsfond Agder når prosjektperioden er over. Regionale forskningsfond Agder sender ut krav om rapportering ca. 1 måned før prosjektets slutt:

- Lenke til sluttrapport gjennom SurveyXact
- Veileder for populærvitenskapelig rapport
- Veiledning til regnskapsrapport
- Skjema for regnskapsrapport.

Formidling av resultater

Regionale forskningsfond Agder har inngått en avtale med forskning.no om formidling av prosjekresultater og vi oppfordrer til å benytte denne kanalen når framdriften i prosjektet tilsier det.

Ved publisering og omtale av prosjektet skal det opplyses at prosjektet har mottatt støtte fra Regionale forskningsfond Agder.

Klageordning

Ifølge paragraf 6 i Forskrift om de regionale forskningsfondene fastsatt av Kunnskapsdepartementet 18. desember 2019 er Norges forskningsråd klageorgan for enkeltvedtak fattet av fylkeskommunen om tildeling av støtte.

Det er ikke adgang til å klage over fylkeskommunens skjønnsutøvelse.

Hvis en søker mener seg utsatt for saksbehandlingsfeil eller myndighetsmisbruk i samband med søknadsbehandlingen, skal det sendes klage til sekretariatet innen 3 uker etter at klageren fikk avslaget. Sekretariatet forbereder saken og oversender den til Norges forskningsråd som tar endelig stilling til klagen.

Klagen skal henvise til avgjørelsen det klages på og de endringene som ønskes i avgjørelsen. Klagen skal redegjøre for de feilene som klageren mener gir grunnlag for å oppheve avgjørelsen.

Vi ber om at prosjektnummeret 350691 benyttes ved *alle* henvendelser til Regionale forskningsfond Agder vedrørende prosjektet.

Ta gjerne kontakt dersom dere har spørsmål.

Vennlig hilsen

Stian Reiersen
Rådgiver
Regionale forskningsfond Agder
Samskaping og internasjonalisering

Brevet er godkjent elektronisk.

SØKNADSINNSTILLING - Regionalt kvalifiseringsprosjekt

HOVEDVURDERING

Administrasjonens vurdering

Kar.	Vurdering
5	Forskning og innovasjon (regionalt forprosjekt) Innovasjonsideen er å samle sanntidsdata fra eksisterende systemer i en digital beredskapsplattform. Søker sier at dette ikke finnes i dag, men gir ikke mer grunnlag enn det. Det fremstår nytt. Prosjektet har potensial til å frembringe ny kunnskap. FoU-aktivitetene fremstår nødvendige for å utvikle et hovedprosjekt. Kunnskapsgrunnlaget kunne med fordel vært mer relevant mtp hvordan dette gjøres andre steder i landet. Det benyttes relevante og anerkjente FoU-metoder.
5	Virkninger og effekter (regionalt forprosjekt) Det er til en viss grad sannsynliggjort at forprosjektet videreføres i et hovedprosjekt, men her kunne søker med fordel vært tydeligere. Forskningsrådet nevnes, men ikke mer spesifikt enn det. Det er en generell beskrivelse av potensielle partnere. Et hovedprosjekt fremstår forankret. Det er sannsynliggjort at prosjektet kan bidra til bærekraftig verdiskaping, særlig mtp tjenesteyting. Søker kunne med fordel vært litt tydeligere på konkrete gevinster om prosjektet lykkes. Prosjektet vurderes å være i tråd med regionale satsinger. Det kan bidra til regional verdiskaping utover de involverte aktørene. Prosjektet vil kunne bidra til kunnskapsoppbygging regionalt.
6	Gjennomføring (regionalt forprosjekt) Det er en sammenheng mellom mål, delmål og aktiviteter. Arbeidsplanen og ressursene vurderes å være i tråd med arbeidspakkenes mål, tidsplan og leveranser. Tidsplan og ressursbruk anses som realistisk i forhold til planlagte aktiviteter. Prosjektleder har relevant kompetanse og erfaring for å lede prosjektet. Prosjektgruppen har den nødvendige kompetansen og ekspertisen for å gjennomføre prosjektet på en effektiv måte. Ledelse og styring i prosjektet er organisert på en egnet måte.
5	Hovedkarakter Prosjektet vurderes som meget godt og støtteverdig

Step 1 Evaluation Report

CONFIDENTIAL

Call reference	ERC-2024-STG
Activity	HORIZON ERC Grants
Funding scheme	ERC STARTING GRANTS
Panel name	SH2
Proposal No.	101165026
Acronym	CARE
Applicant Name	Hossein BAHARMAND
Title	protection, inclusiveness, and dignity: Cultivating humanitarian Assistance through Regional Empowerment

EVALUATION CRITERIA

Criterion 1 - RESEARCH PROJECT

Ground-breaking nature and potential impact of the research project

To what extent does the proposed research address important challenges?

To what extent are the objectives ambitious and beyond the state of the art (e.g. novel concepts and approaches or development between or across disciplines)?

Scientific Approach

To what extent is the outlined scientific approach feasible bearing in mind the ground-breaking nature and ambition of the proposed research (based on the Extended Synopsis)?

Criterion 2 - PRINCIPAL INVESTIGATOR

Intellectual capacity and creativity

To what extent has the PI demonstrated the ability to conduct ground-breaking research?

To what extent does the PI provide evidence of creative and original thinking?

To what extent does the PI have the required scientific expertise and capacity to successfully execute the project?

PANEL SCORE AND RANKING RANGE

Final panel score: C (is not of sufficient quality to pass to Step 2 of the evaluation. Please note that you may also be subject to resubmission limitations in the next call)	Ranking range*: 83%-100% For your information, only the top 30% of the proposals evaluated in panel SH2 were retained for Step 2.
---	---

* Ranking range of your proposal out of the proposals evaluated by the panel in Step 1, in percent, from 1% for the highest ranked proposals to 100% for the lowest ranked.

PANEL COMMENT

This evaluation report contains the final score awarded by the ERC review panel during the first step of the ERC Starting Grant review and the ranking range. The discussion of the panel was conducted within the context of the individual reviews submitted by ERC panel members.

The panel closely examined all the individual review reports and, while not necessarily subscribing to each and every opinion expressed, found that they provide a fair overall assessment. The comments of the individual reviewers were the basis for the discussion and the final recommendation of the panel, and are included in this report.

The panel appreciated the strong interdisciplinary track record of the PI in informatics and other relevant technical expertise that is core to the proposed work, as well as aid logistics. It was also impressed by the series of collaborative publications and projects in which he has engaged, which are strongly relevant for the goals of the proposal. However, the panel was less convinced that the PI was ready to handle the challenges of working with an Ubuntu philosophical framework, or to devise approaches that can engage with the lived experience of aid on the part of affected communities, specifically through participatory research – something on which much of the feasibility of the proposal depends.

The panel recognised the innovative nature and ambitions of the proposal. However, they were not able to ascertain from the proposal how the empirical and local case-study components of the research would be conducted, and what the sampling strategy and the concrete aims of the participatory work with communities would be. They found these elements under-specified and under-theorised in the proposal, but important since they would form the empirical basis for the optimisation component of the work. In particular, the panel would have appreciated more information on the proposed case study to help them understand how it would be used. The panel were also intrigued by the suggested application of the Ubuntu approach but found it under-specified. It would have been helpful to understand more about how this would be used: in relation to what components or goals of the work, how it would inform interactions with affected communities, and how it would shape the engagement of the project with the field. Some of this could have been remedied by including more literatures on bottom-up processes of evaluating and shaping humanitarian practice, since the proposal also does not engage enough with the large body of literature on beneficiary-centred humanitarianism that emerged in journals on humanitarianism and from international organisations during the last two decades.

On the basis of this evaluation, the panel concluded that the proposal does not meet the excellence standards of the ERC. The panel therefore recommends that the proposal should not be retained for Step 2 and should not be considered for funding.

REVIEWER COMMENTS

The following individual reviews have been carried out independently prior to the panel meeting and do not necessarily reflect the panel's final opinion

Reviewer 1

Research Project

Ground-breaking nature and potential impact of the research project

The proposed research aims to develop and evaluate localised indicators for 'protection, inclusiveness, dignity' (PID) in the humanitarian supply chain (HSC). The research has the potential to reconceptualise the effective and context appropriate delivery of humanitarian aid. This is an important challenge. The objectives are ambitious and there are several innovative aspects to the proposal. At the same time, it is rather difficult to fully grasp how the proposed research will achieve its stated objectives.

If I understand correctly, a context-intervention-mechanism-outcome (CIMO) logic will be used to identify the context-dependent PID indicators. The actual research will rely on participatory research, and rely on contrasting Ubuntu and capabilities approaches, but the proposal does not provide further details; e.g., where this research will take place, or how many communities will be contacted? The proposal also suggests using existing data sources (such as ReliefWeb, etc). This makes it unclear what precisely will be done. The indicators will be evaluated using a computational multi-agent reinforced learning (MARL) approach. The empirical content of these simulations is not specified either, apart from noting that the models will be fed back to the communities. Eventually, validation of the indicators will be done via a case study (How different from earlier stages? Where?). Overall, it is unclear what is proposed exactly. At some points it appears to be a largely a theoretical exercise, but the case study and participatory observations also suggest a direct engagement with 'local' actors.

Scientific Approach

I have some concerns about the feasibility of the proposed research. The first part of the research reminded me of 'Everyday Indicators' projects (Firchow), a methodology that is promising. However, the proposal does not refer to this method specifically. Also, in order to assess its feasibility more detail would be needed. The suggested feedback-loops between the CIMO and MARL approach also seem not fully thought through. The contribution of the case study is not clearly outlined and, again without any further detail, it is near impossible to judge whether the case study would be valuable (or even feasible).

Principal Investigator

Intellectual capacity and creativity

The applicant has relevant computational and substantive skills to be confident about proper understanding of system, computational approaches, and the humanitarian supply chain. The PI also has field experience in evaluating earthquake relief in Nepal.

Reviewer 2

Research Project

Ground-breaking nature and potential impact of the research project

The project speaks to very important matters in humanitarian aid delivery and focuses on the crucial aspect of the salience of local communities for aid effectiveness and fairness. However, its novelty is severely constrained by the underappreciation of the existing literatures on the local level, specifically by the omission of the local turn and local peace. The core assumption of the project - that of a universal understanding of aid effectiveness - has already been significantly problematised in such literatures and the issues are also acknowledged, although certainly not sufficiently addressed in the discourse and practice of humanitarian aid delivery which has for decades dealt with the question of what goes wrong with aid delivery; arguably, this is the foundational question of the field. In this respect, the project reads relatively dated in its framing and underspecified as to its contribution and its scale. The main logic described - contextintervention-mechanism-outcomes (CIMO) logic - is a variation on what scholars involved in the local turn and agencies concerned with local ownership already adapt. A novel aspect of the project is the Ubuntu philosophy - however, it is not sufficiently elaborated how this philosophy underpins the logic of conceptualisation and operationalisation of the project and therefore what groundbreaking difference it can make for the contemporary delivery of aid.

Scientific Approach

The most interesting aspect of the scientific approach is the mention of the engagement with Ubuntu philosophy for the design of an alternative aid delivery yet this is not laid out in the sufficiently clear manner. Otherwise, the use of focus groups, workshops, and computer simulation is a standard and feasible approach provided that the researcher has a sufficient command of these modes of research.

Principal Investigator

Intellectual capacity and creativity

The PI has significant competence in qualitative and quantitative methods necessary for executing this project, although it is not sufficiently clear if they have experience in fieldwork methodology to the extent required by the project. The PI also has a strong publication record, which however does not sufficiently show familiarity with local approaches to humanitarian aid delivery.

Reviewer 3

Research Project

Ground-breaking nature and potential impact of the research project

The proposed project aims to develop formalised and external quantitative indicators for privacy, inclusion and dignity among recipients of humanitarian assistance that can form an index for aid evaluation. The proposal itself is well written, clearly explained and well put together to argue the case for this project. For the field of humanitarian logistics, the project is justified and undoubtedly at the state of the art.

However, there is a normative gap at the heart of the proposal which the disciplinary expertise of the applicant is not able to address. In line with the proposal's argument, the authorities on whether aid is delivered in a way that honours privacy, inclusion and dignity are affected groups themselves. However, the state of the art in aid effectiveness literature (e.g. the work of Cheesman, Sandvik and Martin, among many others) demonstrates that the search for formalisable metrics external to the populations affected by crisis and aid tends to serve the interests of upward accountability on the part of humanitarian organisations toward donors, rather than outward accountability toward the affected communities that are the focus of the humanitarian mission.

Simulating community experiences of aid is not well justified in the proposal as a form of epistemic justice. Epistemic justice research emphasises that the lived experience of the affected group in question is the only valid authority on whether their interests are being taken into account, and that at the core of epistemic justice are two requirements: first, that the account of lived experience is treated as authoritative, and second, that people are given the opportunity to offer testimony of their lived experience. This proposal seeks to extract testimony and indicators of lived experience, and use them to model and simulate the responses of other communities, thus distancing the beneficiaries of aid from the organisations that distribute it, and decreasing the extent to which humanitarian organisations have to engage directly in processes of consultation with affected communities, and placing machines as mediators between the lived experience of aid interventions and the organisations delivering it. The same reservations apply to the use of capabilities theory and the notion of Ubuntu in this context, each of which are connected to social justice and based on direct, rather than formalised and modeled, connection to lived experience. As such there is a disjuncture between the theory cited in the proposal and the scientific approach which forms the main argument for the proposed project's value.

Scientific Approach

Given this mismatch between theory and scientific approach, it is unlikely that the project's aims (modelling and simulating the direct experiences of affected groups in order to help humanitarian organisations optimise their interventions) will actually lead to greater accountability of those organisations to the groups themselves, rather than to donors. As such, the approach does not appear feasible in the broader sense - although methods of data collection, processing and analysis, and the modelling that follows, are clearly feasible as set out in the proposal.

Principal Investigator

Intellectual capacity and creativity

On a specifically disciplinary basis, the PI is a good candidate to carry out the mathematical work proposed. His research record in humanitarian logistics is strong and his cv suggests he is well prepared to successfully execute the project as outlined in the proposal. However, there is no evidence provided that the PI has experience working with the theories he cites in the proposal (Ubuntu, epistemic justice and capabilities theory). This leaves the core theoretical inputs to the proposed project in doubt, and seems to indicate that they would be addressed only in a superficial and formal way, thus coopting them without working through their actual implications for the project.

Reviewer 4

Research Project

Ground-breaking nature and potential impact of the research project

The proposal concerns the important issues of putting "beneficiaries" in the centre of concern when it comes to humanitarian supply chain and impact assessment. While this topic is very important the debate on decolonialising humanitarian structures is by no means a new debate. As a matter of fact, the humanitarian community is increasingly moving away from referring to aid recipients as "beneficiaries" but rather as crisis affected communities and in many instances as partners in humanitarian efforts. LogFrames that guide humanitarian projects are tailored to address the local situation, cultural contexts etc. The proposal makes an important point that indicators need to be more localized. This would be indeed an important contribution. That this would mark a radical shift as the proposal argues might be somewhat overstated given the decades old debate that was triggered by the works of Mary B. Anderson and Alex de Waal at the end of the 90s. All in all, the proposal seems to be pointing at very important challenges and issues that remain problematic in the field of humanitarian action. To what extent it would propose indeed a groundbreaking reformulation of the current practise remains somewhat elusive, specifically when it comes to the scientific approach.

Scientific Approach

The scientific approach is focussed on a quantitative approach based heavily on data provided by ReliefWeb and HDX. While this approach is certainly a good starting point, in order to understand the actual impact on communities affected by crises, the thoughts that go into project development and implementation and the work of local implementing partners, the project would need to gain insights from the humanitarian actors themselves. This does not seem to be the case in WP1-4 and WP5 keeps the option of a case study with refugees in Uganda open without detailing how data gained from that would mitigate biases as indicated by the overarching goal of the project.

Principal Investigator

Intellectual capacity and creativity

The PI has demonstrated an excellent ability to conduct ground-breaking research in the field of humanitarian action and has contributed substantially to the debate in the recent years. Overall, the PI's CV provides a good evidence for creative and original thinking and the track-record of the PI indicates that there is an excellent ability to successfully execute the project.

Abstract:

Efficient communication and collaboration are vital for emergency responses to natural and man-made disasters. The 2021 Swedish forest fire and the 2023 Türkiye earthquake highlight the need for cross-border cooperation. Climate changes and the war in Ukraine underlines the urgency for EU, NATO, NGOs, and national authorities to collaborate more closely.

Interoperable training and efficient communication with a shared understanding of terminology is the basis for preparedness and effective emergency response. The certified training modules from UCPM support interoperability, while the national training programs for multi stakeholder rescue in Norway and Bulgaria are provided in national languages and not yet well internationally aligned.

The iTERMS project will identify gaps in, and among, national training programs and terminologies to enhance the effectiveness of emergency response. We aim to streamline training and terminologies, develop multilingual terminology resources, and integrate these with digital applications for PCs and smartphones, including an offline-capable mobile app.

Relevant terminologies are available but in different websites, user interfaces and language coverage. The project will create a single access point for these terminologies, enrich them with images and video, and expand their coverage with missing records and translations into additional languages.

The project will deploy these innovations in real-world training programs for emergency response management and disaster translation in Bulgaria, Norway and in Ukraine to evaluate their impact for trainers and students. For the wider use, we will establish a method to evolve national training programs towards interoperability. Project results will be accessible from the UCPKN to enable pooling the civil protection capabilities of the UCPM participating countries and promote more interoperable emergency response across the European Union and beyond.

Evaluation Summary Report

Evaluation Result

Total score: 78.00 (Threshold: 70)

Criterion 1 - Relevance

Score: **25.00** (Threshold: 20 / 30.00 , Weight: -)

The criteria below will assess the clarity and consistency of project, objectives and planning; extent to which they match the themes and priorities and objectives of the call; replicability and scalability of project results; stakeholder representation and inclusion. Therefore, the proposals will be evaluated against the following sub-criteria:

Sub-criterion 1.1 - Purpose, thematic focus and objectives (0-12, threshold 6):

How relevant is the proposal to the general objectives of the call and objectives of the selected topic?

How does the action contribute to the specific outcomes of the selected call topic, including through its thematic focus?

10

The proposal is in line with both the call and topic objectives, with adequate references made across the text. Focus on the topic selected (priority 1: institutional preparedness) is unquestionable through outcomes and activities proposed. Relevance of the proposal to the KAPP call is rather evident, clear link with civil protection at EU level is established.

Sub-criterion 1.2 - Needs analysis (0-8, threshold 4):

Does the proposal demonstrate a clear need for the intended action, e.g., through a reference to existing needs analysis that has been conducted previously or an intent to quantify a realistic and perceived need?

Does the initial needs assessment include a mapping of relevant past and present initiatives and indicates how the current proposal positions its work in relation to them?

7

Initial needs assessment is well outlined in the proposal and the declared needs are justified and rooted in evidence (e.g., INSITU project's findings and links to different objective articles, conducted interviews on Multilingual Emergency Terminology). The proposal includes a mapping of relevant past and present initiatives in the eligible countries (such Terminology without Borders, WIPO pearl). In cases in which relevant initiatives exist, the proposal explains how it will pursue synergies with ongoing initiatives or incorporate existing results from past initiatives into the project implementation.

Sub-criterion 1.3 - EU added value (0-5, threshold 3):

Is there a clearly identifiable added value for the UCPM and its stakeholders beyond the parties involved in the proposal?

4

The proposal makes a convincing effort in explaining the EU/UCPM added value of its activities (e.g., by referring to a broader UCPM policy framework, different exercises and projects under UCPM, external guidance relating to UCPM, such as INSARAG or WHO EMT, Copernicus). Consortium composition is not very region focused (NO, UA, BG, AT) while the activities proposed are open to broader participation, giving a space for involvement of other UCPM actors. While a gap has been found, it can be potentially a niche area that may not have larger uptake within the UCPM community.

Sub-criterion 1.4 - Consortium composition and links to stakeholders (0-5, threshold 3):

Does the consortium composition encourage meaningful, targeted work between different stakeholders concerned with the thematic focus?

Does the consortium composition include civil protection and/or DRM end-users? Have the end-users been involved in the formulation of the proposal?

4

The consortium brings together a set of stakeholders representing different perspectives (e.g., universities, centres of excellence, standardisation organisations, university alliance), but could benefit from further enrichment from direct CP/DRM authorities and a broader geographic reach. The consortium partners have an established role in the CP-DRM sector otherwise. The end-user perspective and role has been clearly outlined in the proposal (both from standardisation as well as operational field user viewpoint, see figure 3).

Criterion 2 - Quality

Score: **30.00** (Threshold: 25 / 40.00 , Weight: -)

The criteria below will assess the technical quality; logical links between the identified problems, needs and solutions proposed (logical frame concept); methodology for implementing the project (concept and methodology, management, procedures, timetable, risks and risk management, monitoring and evaluation); feasibility of the project within the proposed time frame; cost effectiveness. Therefore, the proposals will be evaluated against the following sub-criteria:

Sub-criterion 2.1 - Clarity, consistency and technical soundness (0-14, threshold 7):

- How coherent is the overall design of the action?
- To what extent does the proposal include a sufficient background analysis, credible baseline, targets, and sources of verification?
- To what extent are the activities and the expected project results clearly described, appropriate and realistic?

11

The action proposed is well-thought through, has a clear problem statement and overall objectives supported by an adequate background analysis. There are no major discrepancies or flaws in the overall concept of the project. All activities proposed are meaningful, logically linked with each other and the problem statement. Their results clearly contribute to addressing the gaps identified in the needs analysis, are realistic and appropriate to the action. Baselines and targets provided to justify the above are credible and verifiable (baseline values missing, but otherwise very well dissected per month and milestone). The proposal is presented in a clear and consistent manner, without leaving too much space for guessing or interpretation. It is well written and technically sound (graphical representations assist in comprehension), proving consortium's competence in the subject area.

Sub-criterion 2.2 - Project management and implementation (0-14, threshold 7):

- To what extent is the action plan for implementing the action clear and feasible, and the timeframe realistic, given the resources available?
- To what extent are the indicators chosen to monitor the activities clearly described and consistent with the expected results?
- To what extent does the project description identify and assess potential risks to the implementation of the proposed action? How appropriate are the mitigation measures?
- To what extent does the consortium have an adequate organisational structure and procedures to ensure decision-making, effective communication and coordination among consortium members and problem-solving for the proposed action?
- Does the proposal include measures to contribute to EU-wide climate change mitigation and adaptation efforts (e.g., reducing the number of travels, green procurement)?

11

The project methodology is sound, with a clear and logical link between different work packages and consecutive tasks. Action plan is clear and feasible while the timeframe realistic. The envisaged indicators should allow for a meaningful verification of project's implementation on both outcomes and outputs levels. Provisions for monitoring and evaluation, quality assurance and risk management were adequately foreseen, proposed measures are sound and sufficiently developed. The proposal outlines a well-defined approach to project management, with different roles and responsibilities in implementation and monitoring of project progress. Work is distributed among all partners, in line with their expertise and capacity. The proposal includes a declared intention to implement measures of a specific nature to reduce climate impact (e.g., reducing travel). The proposal focuses on climate impact reduction beyond its immediate activities (e.g., "... we plan to leverage the translation of climate change terms from UNTerm into additional European languages to increase the awareness among students ...").

Sub-criterion 2.3 - Cost-effectiveness (0-6, threshold 3):

- How well are the activities reflected in the budget, and is the ratio between the estimated costs and the results satisfactory?
- Has the consortium proposed realistic measures to ensure sound financial management of the project and cost-effectiveness of its activities?
- How well is the subcontracting of activities justified, and is the amount proposed reasonable?

4

The proposal outlines a sound financial management approach of the project (e.g., a dedicated financial controller to follow project implementation) and reflects critically about cost-effectiveness of proposed activities (e.g., optimisation of travel costs, reusing existing assets). Subcontracting is considered (software development), it is duly justified, and the amount proposed reasonable. Overall staff costs are on the higher end, but are proportional to the activities proposed.

Sub-criterion 2.4 - Project team and composition (0-6, threshold 3):

- To what extent does the consortium have the necessary resources, including staff (project team) to ensure the implementation of the proposed action?

4

Most of the project team has sufficient experience to ensure implementation of proposed activities, with some of the consortium members having prior experience in implementing projects at European level.

Criterion 3 - Impact

Score: **23.00** (Threshold: 20 / 30.00 , Weight: -)

The criteria below will assess the ambition and expected long-term impact of results on target groups/general public; appropriate dissemination strategy for ensuring sustainability and long-term impact; sustainability of results after EU funding ends. Therefore, the proposals will be evaluated against the following sub-criteria:

Sub-criterion 3.1 - Replicability, scalability and impact (0-16, threshold 8):

To what extent is the action likely to have a tangible impact on its target groups and are impacts realistic?

To what extent are the results replicable and lend themselves to future exploitation in other geographical areas and/or sectors? Is replicability already envisaged?

To what extent does the proposal envisage building upon outputs of the action to generate a deeper, broader impact on investments and/or policies (e.g., through private, national, EU and other multilateral programmes)?

Does the proposal meaningfully incorporate or build upon other EU-funded initiatives relevant for the topic of the proposal (UCPM, Horizon)?

11

The proposal provides a convincing narrative of a long-term and tangible impact of presented activities. It offers a critical reflection on how different outcomes will impact different target groups. Actions outlined in the proposal have a moderate likelihood of replication to other contexts/sectors (e.g., because of their interoperable nature, open access, partnership with standardisation organisation, translations into widely spoken languages, and integration into existing guidance), but the actual uptake of the software by relevant authorities is a larger open question. This is the most critical part of the success of the project.

Nevertheless, the consortium has clear ideas as to how project outputs can support broader policy initiatives or collaboration on local, regional, national or EU level. The proposal builds on the results of previous actions funded by the UCPM (such as BORIS2 and eNOTICE-2 or MODEX exercises and actual findings from operational deployment), making a substantial contribution in the process (e.g., by expanding use of results to different stakeholders/context, improving tools or methodologies etc.).

Sub-criterion 3.2 - Sustainability (0-8, threshold 4):

To what extent does the project description include a strategy to make achieved results accessible and usable after the action has ended?

Are links to other stakeholders and initiatives that could prolong the life of the outputs clearly outlined?

Are the partnerships that the consortium is intending to pursue during the implementation likely to serve the objectives of the call and increase the reach of the outputs?

7

The proposal critically reflects about sustainability of its results, proposing measures ensuring their availability and usability beyond the project duration (e.g., open access, freemium model, ways to make the product create income, using fees). The measures proposed are adequate to target audience and activities undertaken. Some aspects of sustainability are linked to institutional ownership of the results and their continued maintenance by the consortium (e.g., already existing subscribers to Termer). The proposal refers to development and following of an end-user and stakeholder engagement plan (D6.1).

Sub-criterion 3.3 - Dissemination (0-6, threshold 3):

To what extent is the dissemination strategy clear, targeted, and adequate to communicate on the project results and to reach the relevant target groups?

5

Dissemination strategy is well-thought through, adequate to the target audience and activities undertaken. The strategy intends to make use of communication and dissemination tools offered to projects by the UCPKN (e.g., online platform).

Scope of the application

Status: Yes

Comments (in case the proposal is out of scope)

Not provided

Technical or financial clarifications

Add here any technical and/or financial clarifications you may want to ask the applicants.

Actions outlined in the proposal have a moderate likelihood of replication to other contexts/sectors (e.g., because of their interoperable nature, open access, partnership with standardisation organisation, translations into widely spoken languages, and integration into existing guidance), but the actual uptake of the software by relevant authorities is a larger open question. This is the most critical part of the success of the project. Could the consortium shortly assess from their viewpoint what are main challenges related to CP/DRM authorities actually having a "buy-in" for the use of the tech and the change management involved?

Overall comments

Indicate the strengths and weaknesses of the application.*Key strengths:*

- 1. The consortium has clear ideas as to how project outputs can support broader policy initiatives or collaboration on local, regional, national or EU level. The proposal builds on the results of previous actions funded by the UCPM (such as BORIS2 and eNOTICE-2 or MODEX exercises and actual findings from operational deployment), making a substantial contribution in the process (e.g., by expanding use of results to different stakeholders/contexts, improving tools or methodologies etc.).*
- 2. The proposal critically reflects about sustainability of its results, proposing measures ensuring their availability and usability beyond the project duration (e.g., open access, freemium model, ways to make the product create income, using fees).*

Key weaknesses:

- 1. While a gap has been found, it can be potentially a niche area that may not have larger uptake within the UCPM community. Actions outlined in the proposal have a moderate likelihood of replication to other contexts/sectors (e.g., because of their interoperable nature, open access, partnership with standardisation organisation, translations into widely spoken languages, and integration into existing guidance), but the actual uptake of the software by relevant authorities is a larger open question. This is the most critical part of the success of the project.*
- 2. The consortium brings together a set of stakeholders representing different perspectives (e.g., universities, centres of excellence, standardisation organisations, university alliance), but could benefit from further enrichment from direct CP/DRM authorities and a broader geographic reach.*

12. SFI SERENE: Resilient Mission-Critical Ecosystems for Sustainable Services (Centre for Research-Based Innovation, stage 1)

Research Council of Norway

2024

Assessment of grant application submitted to the Research Council of Norway

Grant application

Project number	355199
Project title	Resilient Mission-Critical Ecosystems for Sustainable Services
Project manager	Radianti, Jaziar
Project owner	UNIVERSITETET I AGDER
Application type	Research Centre / Societal and Industry-oriented Research Centre
Topic	Innovation
Programme/Activity	Sentre for forskningsdrevet innovasjon
Case officer	Aase Marie Hundere

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See information about assessing grant applications.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for Research Council of Norway, including the requirements for confidentiality. I/We understand that I/we are not permitted to use content from the application or assessment text into online services, such as ChatGPT. See information about assessing grant applications.	Yes
I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence SFI phase 1	A
Impact SFI phase 1	B
Implementation SFI phase 1	A

Criteria

Excellence | SFI phase 1

.

- The extent to which the centre has the potential to generate new knowledge.
- The extent to which the centre's research will be relevant to innovation and have the potential for developing innovations that address the current and future needs of user partners in industry and/or the public sector.

This proposal demonstrates strong potential for advancing knowledge in a critical and rapidly developing field. The team is composed of skilled researchers and is supported by an extensive network of societal partners from both the business and public sectors. The work packages are well-structured, and the centre is well-positioned to play an essential role in developing innovative and effective solutions, given the foundational importance of cybersecurity to contemporary society. However, the proposal lacks specific metrics or benchmarks for measuring success, which may challenge efforts to track progress. Additionally, the objectives around resilience capacity-building within partner organisations remain somewhat vague. The connection between cybersecurity and green innovation is also only briefly mentioned.

Selected mark : A - Very good

The application responds very well to the criterion; it has few and only minor shortcomings.

Impact | SFI phase 1

.

Potential impacts of the proposed research

- The extent to which the centre's planned results can address important challenges in the sector(s), both now and in the future.
- The extent to which the centre's planned results will provide a basis for value creation in Norwegian trade and industry and/or the public sector.

The proposed centre for cybersecurity has significant potential to address critical sector challenges both now and in the future, particularly as digital threats continue to evolve. The centre's initiatives, such as developing a maturity model and enhancing systemic risk tools, align well with Norway's need for increased resilience across both the public and private sectors. The inclusion of advanced technological solutions, like robotics and AI, as well as mapping digital supply chains, will provide valuable insights into systemic vulnerabilities. However, the proposal would benefit from a clearer articulation of its impact. While its broad ambitions are commendable, the wide range of objectives risks diluting focus, which may challenge effective resource allocation. Additionally, short—and mid-term milestones are not well-defined, which makes it harder to evaluate the project's incremental impact. Enhancing public sector representation within the consortium and refining dissemination strategies could also improve the project's long-term societal impact and value creation.

Selected mark : B - Good

The application responds well to the criterion, but has some shortcomings.

Implementation | SFI phase 1

Overall assessment of the quality of the centre consortium

- The extent to which the participants, including user partners, complement each other, and the extent to which the centre consortium possesses the necessary expertise to implement the centre initiative effectively.

The quality of the centre's organisation

- The extent to which organising the research activities as one centre rather than several separate projects provides added value.

The consortium is well structured, with partners from diverse sectors, including healthcare and energy, contributing valuable cases to explore networking opportunities and examine sectoral interconnections. The centre's organisational framework is well-designed, with a clear alignment between the structure and the Work Packages (WPs). The application clearly articulates the centre's necessity, reinforced by a strong and motivated partner network.

However, more details on collaboration mechanisms and tailored innovation processes for resilience would enhance understanding of the centre's operational approach. Additionally, a more explicit integration of data-driven and human-centric methodologies would clarify how resilience will be practically studied and achieved.

Selected mark : A - Very good

The application responds very well to the criterion; it has few and only minor shortcomings.

Special points to consider

Comments to special points to consider

Relevans – SFI trinn 1

I hvilken grad senteret er forankret i identifiserte behov og forpliktelser til involvering og medfinansiering hos brukerpartnere.

- I hvilken grad senteret har gode planer og prosesser for å fremme innovasjon og følge opp resultater med innovasjonspotensial, og inkluderer innovasjonsfaglig kompetanse.
- I hvilken grad senteret vil bidra til å utvikle et næringsliv med konkurransekraft i lavutslippssamfunnet og bærekraft med hensyn til klima, miljø og samfunn. Sentret skal ha positiv eller nøytral effekt på grønn omstilling av norsk næringsliv.

The center is very well anchored in the identified needs of user partners. The application documents very good support among user partners regarding their intentions for involvement and co-financing of the center. The center has very good plans and processes for promoting innovation and following up results and has very good innovation expertise. The application describes very well how the center will contribute to the development of a competitive business sector in a low-emission society and has a positive or neutral effect on the green transition of Norwegian business and industry.

Valgt karakter: A: Meget godt

Søknaden svarer svært godt på kriteriet, den har få og uvesentlige mangler.

13. Secularity: Gamification and Mixed Reality Approaches to Improve Cybersecurity Learning Experience and Develop Work Related Competence

Research Council of Norway

2024

Assessment of grant application submitted to the Research Council of Norway

Grant application

Project number	352643
Project title	SECUREALITY – Enhancing The Relevance of CyberSECURITY Teaching and Learning in Higher Education with Gamification and Extended REALITY
Project manager	Elgazzar, Rania
Project owner	UNIVERSITETET I AGDER
Application type	Researcher Project / Researcher Project for Scientific Renewal Education
Programme/Activity	Forskerprosjekt 2024
Case officer	Miriam El Moussaoui

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See Regulations on Impartiality and Confidence in the Research Council of Norway.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for the Research Council of Norway. See Guidelines for referees/panels who assess applications for the Research Council of Norway.	Yes
- I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence – potential for advancing the state-of-the-art	4
Excellence – quality of R&D activities	4
Impact	4
Implementation	4

Criteria

Excellence – potential for advancing the state-of-the-art

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state-of-the-art, including significant theoretical, methodological, experimental or empirical advancement.

The proposal attempts to address an important and globally recognised challenge through development of effective educational approaches/resources/practices to enable students to learn cybersecurity effectively. The proposal also seeks to identify the top skills required in this area, yet these seem to be already clearly defined in the public domain. The project has little theorisation limiting the extent of empirical knowledge development. Its argument - why the introduction of gaming and XR, would serve as a remedy to the critique launched against current teaching practices – is not convincingly explained, at a conceptual and theoretical level. Whilst the proposal claims that use of XR technologies to teach cybersecurity is novel and ambitious and 'state-of-the-art', this is questionable.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Excellence – quality of R&D activities

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.
- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods. Appropriate consideration of interdisciplinary approaches.
- The extent to which appropriate consideration has been given to ethical issues, safety issues, gender dimension in research content, and use of stakeholder/user knowledge if appropriate.

The research design is comprehensive and offers an excellent mixed methods approach, that brings in iterative design, with qualitative measures, and extensive experimental approaches. However, an experimental approach using pre-and-post measures to evaluate new educational resources has known weaknesses, and is unlikely to provide strong irrefutable evidence of the educational impact of these new resources/approaches on students' knowledge, competence, skills etc. The RQs are mainly practical in nature, and lack required theorisation or impact on scientific knowledge. The strengths/weaknesses of the use of the TPACK model are not addressed and feels like a bolt-on. The ethical issues are not addressed in sufficient detail, and there is lack of reference to the gender dimensions. The proposal brings key strengths in its interdisciplinary in nature, and evidence of stakeholder/user involvement in all aspects of the project.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Impact

.

Potential impact of the proposed research

- Potential for academic impact:

The extent to which the planned outputs of the project address important present and/or future scientific challenges.

The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.

- Potential for societal impact (if addressed by the applicant):

The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.

- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.

- Quality and scope of communication and engagement activities with different target audiences, including relevant stakeholders/users.

The project has the potential to make significant impact in cybersecurity education for the universities and training providers involved. However, it is not clear that this impact will reach far beyond these groups. The planned outputs are low in volume and the KPIs are not particularly stretching. The outputs are not at the international impact level expected for RCN funding. The project is aligned to SDGs, but it is not clear that the proposal will have significant impact on education and training.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Implementation

.

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience, and demonstrated ability to perform high-quality research (as appropriate to the career stage).

- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.

- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.

- Appropriateness of the proposed management structures and governance.

The project team is multi-disciplinary and brings together these relevant and appropriate fields of expertise, as well as the involvement of key stakeholders (industry, teachers, students). However, there is a lack of strong experienced leadership in the project team - the project manager has some relevant expertise, but lacks significant expertise to deliver the expected high-level research. The project plan is very ambitious and some of this research will be time consuming. The general outline of the studies is reasonably clear, but for a research project one would expect added in-depth descriptions of conceptual issues and analytical procedures to be deployed in such an interdisciplinary activity. The project is well organised, tasks are adequately assigned and the project will be well managed. The team have access to good infrastructure – lab set ups – for realising the work.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Summary of marks

Criterion	Mark
Excellence – potential for advancing the state-of-the-art	4
Excellence – quality of R&D activities	4
Impact	4
Implementation	4

Criteria

Excellence – potential for advancing the state-of-the-art

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state-of-the-art, including significant theoretical, methodological, experimental or empirical advancement.

The project covers an important issue, namely the coordination at the local level and the role of volunteers. Particularly the notion of a digital volunteer is very interesting - albeit work already exists on the topic, so what the project would add needed more explanations. However, it would have been helpful to have a clearer and more focused perspective on the central question. There are too many different strands in the proposal that make the potential for an overall contribution not sufficiently clear. There needed to be also more discussion on how the different strands fitted into the broader literature on networks and collaboration at the local level. This is not a matter of adding more literature, but rather being clearer as to what exactly the core theoretical hook(s) might be that underpin the research.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Excellence – quality of R&D activities

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.
- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods. Appropriate consideration of interdisciplinary approaches.
- The extent to which appropriate consideration has been given to ethical issues, safety issues, gender dimension in research content, and use of stakeholder/user knowledge if appropriate.

The proposal benefits from clearly stated research questions. However, the lack of overall integration means that there are too many different components and how the core idea of a 'joint activity theory' is going to cut across these different strands needed to be explored in greater detail. Different types of crisis management situations and the design of the local case studies deserved greater attention. There needed to be more attention to the different parts of local populations and the inherent ethical issues dealing with potentially vulnerable individuals (that are critical for this research).

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Impact

Potential impact of the proposed research

- Potential for academic impact:

The extent to which the planned outputs of the project address important present and/or future scientific challenges.

The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.

- Potential for societal impact (if addressed by the applicant):

The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.

- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.

- Quality and scope of communication and engagement activities with different target audiences, including relevant stakeholders/users.

The involvement of the different practice-oriented stakeholders is very beneficial to the proposal, but their role and type of involvement needed to be considered further so as to make the potential for societal impact clear. The main academic impact is not sufficiently discussed and the lack of a clear overall guiding research concern reduces the potential for generating scientific impact. The interaction between academic-practitioner worlds and how it is organised would require further deliberation. There is nevertheless a good plan for academic contributions and the production of educational material is interesting. However, more attention needed to be paid to the pathways of generating impact.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Implementation

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience, and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.

The proposed research team appears to be well organised and the collaborative arrangements are noteworthy. More attention could have been paid to the core competencies of the research team, especially its background in the proposed field of study. The project is likely to require more competence in view of local government dynamics and broader social science considerations that govern the relationship between volunteers and state-based actors. How the collaborative research would be governed required more attention.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Abstract:

The midterm review of the Sendai Framework highlights persistent challenges in disaster risk reduction (DRR), particularly the lack of coordination between disaster risk agencies, sectoral ministries, stakeholders, and policies, hindering coordinated planning and effective decision-making. Recent disasters, such as the 2024 Spain Valencia flood and the 2020 Gjerdrum quick clay landslide in Norway, reveal governance weaknesses, inadequate risk management, and communication barriers, intensifying disaster impacts. These events demonstrate the need for integrated, multi-sectoral coordination, decentralisation, and better risk-informed decision-making. A positive example is Greece's wildfire risk management system, which integrates science and technology for improved governance in DRR. However, gaps in local- and regional-level implementation persist. The TOGETHER project aims to address these challenges, focusing on multi-level and cross-sectoral coordination to build a disaster-resilient society amidst climate change and multi-hazard risks. The final outcome of this project is a toolkit that embodies three innovations: (1) Five interoperability frameworks (legal, organisational, technical, semantic, and cross-domain) to provide FAIR data, (2) a multi-tool system (MTS)- an intelligent AI agent to generate insights using the FAIR data for Disaster Risk Management Governance (DRMG), and (3) DRMG that comprises innovative solutions and existing systems and best practices to enhance multi-level and cross-sectoral interactions within the existing governance systems and protocols for more efficient disaster management coordination. The tool will implement a novel public-private-civic partnership (PPCP) approach in three Disaster Risk Management Innovation Hubs (Norway, Greece, Spain) to co-create, co-evaluate, and demonstrate the functionalities. Two replication studies in Portugal and Türkiye will showcase the robustness of the toolkit for DRM.

Evaluation Summary Report

Evaluation Result

Total score: 14.50 (Threshold: 10)

Criterion 1 - Excellence

Score: 5.00 (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art.
 - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

The overall goal of the proposal, namely to improve the coordination between countries and numerous agencies for disaster response, is very well described and contextualised with recent examples.

The objectives are very clearly defined and are very pertinent to the topic. For instance, the proposal defines very adequately eight specific objectives, all of which are measurable, verifiable and realistically achievable.

Relevant Key Performance Indicators are adequately defined.

The proposal is excellently grounded in the current state of the art. It includes references to very relevant past and current projects, including but not limited to MEDiate, C2IMPRESS and MYRIAD-EU.

Its own ambitions and contributions beyond that state of the art are very significant. The envisaged enhancement of multi-level and cross-sectoral coordination for multi-hazard, multi-risk disaster risk management and governance is very challenging, and the proposal argues convincingly that major advances can be realised.

The proposal includes novel solutions and frameworks.

The TOGETHER proposal aims to develop prototypes reaching TRL 5 to 7 at the end of the project. This is very appropriate.

The methodology is complex, but still clear, very appropriate and sound. The participatory, people-centered and multi-stakeholder Public-Private-Civil Partnership (PPCP) credibly leads to efficient co-creation of the desired results. Making use of living labs at three pilot sites is a very good element of the methodology.

The approach is very well supported by scientific and technical explanations, which is excellent, and appropriately considers new technologies to address the challenges of today's world.

One such new technology is the use of AI. Domain-specific large language models (DLLMs) will be trained with recent events of several natural hazard types, and will specifically exclude personal data. This will ensure that the developed system will be technically robust, accurate and reproducible.

The inter-disciplinary nature of the proposed project is convincingly integrated in the proposal setup. In particular, social sciences and humanities (SSH) are relevant for the subject, and well considered. For example, many STEM and SSH researchers are involved in the stakeholder partnership forum.

The gender dimension is adequately addressed for the research and innovation aspects. Special attention will be paid to review the conclusions drawn to avoid gender bias.

Open Science practices are very well implemented as an integral part of the proposed methodology. The project results and all publications will be open to access (OpenAIRE, ResearchGate, European Union portals).

The research data management is also properly addressed. It is in line with FAIR principles, European data strategy and the EC Open Science principles. The data will be processed and stored in accordance with intellectual property rights, GDPR, standards and legislation.

Criterion 2 - Impact

Score: 5.00 (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project.
- Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.

The pathways from results to outcomes and impacts is described very credibly in the proposal. The proposal has a vision not only for short- and mid-term impacts, but also on longer timescales.

The main activities (stakeholder partnership forum, toolkit, living labs) contribute to impacts, addressing the topic's Expected Outcomes (EOs) and all 9 DRS Destination Expected Impacts (EIs) in an outstanding way. The contribution of the project to achieve strong social, economic, scientific, technology and (indirectly) environmental impact is convincing.

Potential barriers to the expected outcomes and impacts are sufficiently identified, and appropriate and realistic mitigation measures are provided. For example, the inherent risk of not being able to leverage sufficient buy-in and motivation from the concerned target groups is recognised and countered appropriately.

Scale and significance of the proposal's impacts are high and very well estimated and quantified with specific, measurable and meaningful KPIs. One example of an excellent contribution is the outreach of the multi-tool system, which will reach more than 1.000 practitioners.

The dissemination and communication measures are very well developed in every aspect. In the core of the activities is the Stakeholder Partnership Forum, which facilitates outreach to all the well-identified target groups by organising living lab workshops, synergy-building and civil societies/citizen-engaging activities. Furthermore, the proposal will make use of the CMINE platform, which further helps engage relevant stakeholders.

Also, academic dissemination is well foreseen, by way of conference attendances, workshops, etc.

Besides the activities in the forum, there is also an aspect addressing the general public by means of a project website, social media and partner networks, which is also a good measure.

Exploitation is very well considered. Six key exploitable results of high quality are identified. The strategy for the management of intellectual property to support exploitation of results is very well outlined and adequate.

Criterion 3 - Quality and efficiency of the implementation

Score: **4.50** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

The work plan with its seven work packages is excellently elaborated, with a clear link between work packages and objectives, expected outcomes and impacts. The work plan is realistic and effective, consistent and logical. Inter-dependencies are made clear, for example in the well-developed GANTT chart. There are useful and well-defined milestones, and meaningful deliverables. This enables effective project monitoring.

There is a very well identified list of critical risks for project implementation, covering the work areas of all work packages. The risk analysis is realistic and adequate mitigation measures are proposed.

The resources allocated to the work packages are well balanced and in line with their objectives and deliverables.

While the role of all partners is valid and clear, the information on personnel effort per work package is inconsistent – table "Summary of staff effort" (3.1.7) misses a number of participants, but covers the full total PM allocation. This is not consistent with the budgetary information provided in part A. This unclarity is a shortcoming.

Tasks have been allocated to partners in line with their expertise. All participants have demonstrated relevant expertise in their fields of endeavor.

The consortium as a whole is complementary and brings together the required expertise in all the necessary fields, including inter-disciplinary. The needed local and regional disaster management authorities are also very well addressed. The partners have access to all required infrastructure that is needed for this project.

Scope of the application

Status: **Yes**

Comments (in case the proposal is out of scope)

Not provided

Exceptional funding

A third country participant/international organisation not listed in [the General Annex to the Main Work Programme](#) may exceptionally receive funding if their participation is essential for carrying out the project (for instance due to outstanding expertise, access to unique know-how, access to research infrastructure, access to particular geographical environments, possibility to involve key partners in emerging markets, access to data, etc.). (For more information, see the [HE programme guide](#))

Please list the concerned applicants and requested grant amount and explain the reasons why.

Based on the information provided, the following participants should receive exceptional funding:

Not provided

 Associated with document Ref. Ares(2025)2059990 - 14/03/2025

Based on the information provided, the following participants should NOT receive exceptional funding:

Not provided

Use of human embryonic stem cells (hESC)

Status: No

If YES, please state whether the use of hESC is, or is not, in your opinion, necessary to achieve the scientific objectives of the proposal and the reasons why. Alternatively, please state if it cannot be assessed whether the use of hESC is necessary or not, because of a lack of information.

Not provided

Use of human embryos

Status: No

If YES, please explain how the human embryos will be used in the project.

Not provided

Activities excluded from funding

Status: No

If YES, please explain.

Not provided

Do no significant harm principle

Status: Yes

If Partially/No/Cannot be assessed please explain

Not provided

Exclusive focus on civil applications

Status: Yes

If NO, please explain.

Not provided

Artificial Intelligence

Status: Yes

If YES, the technical robustness of the proposed system must be evaluated under the appropriate criterion.

Overall comments

16. Mindful Engagement with Trustworthy AI for High Reliability Organising (Metron AI)

NORDFORSK

2025

Application nr. 231758

Mindful Engagement with Trustworthy AI for High Reliability Organising

Overall grade: 3

1 = Poor; 2 = Weak; 3 = Fair; 4 = Good; 5 = Very good; 6 = Excellent; 7 = Outstanding

Contribution to call aims

- The extent to which the proposed research is appropriate to the aims of the call

This proposal is scientifically interesting and timely, with a fascinating research question revolving around how AI can affect critical thinking by individuals and organizations and how mindful engagement can mitigate it. The project has the potential to support the responsible use of AI across multiple key sectors where critical infrastructures play an important role. However, the project lacks concreteness and the necessary level of detail to convincingly argue for its relevance. The proposal in its current form is too vague.

Scientific quality

- Clarity of objectives, research questions/hypothesis and project description
- Soundness and credibility of concept and methodology (including, when relevant, interdisciplinary approaches, stakeholder involvement, consideration of the gender dimension in research content)
- Potential to develop new knowledge beyond current state-of-the-art
- Ethical considerations and how these will be handled
- Credibility of expected research results, societal relevance, and potential for impact

This is a very important field of research - alignment of human-AI interaction to calibrate trust, oversight and human control. Concretely, the project asks three questions:

1. How does the integration of AI impact high-stakes decision-making in high-reliability organisations?
2. How do mindfulness practices influence decision outcomes?
3. How can AI mitigate false-positive errors in high-stakes decision-making?

The proposal looks at mindfulness and mindlessness, and the reliance on AI systems in decision-making in critical organisations such as power plants and others that form part of the critical infrastructure of a country. Thus, the topic is of high relevance: how does AI change decision-making in critical sectors.

However, the project proposal is vague when it comes to concrete research questions and tasks. The description of the individual work packages is generic, for example, WP2 : "First iteration of the design proposal to gain insights how HRO workers develop trust towards AI assistance." and "Co-creating an integrative approach with practitioners and literature towards a potential solution design."

Similar in WP 4: "An evaluation of the developed artefact to examine its extent which resolves the stated problem. With key envisioned problems of overreliance and confirmation bias". What is the stated problem? What exactly is to be done?

There is no clear plan for stakeholder engagement; and outputs and outcomes are somehow underspecified. It is clear what the theoretical focus of the project is - calibrating the dynamic of mindfulness and mindlessness in AI interactions in individual and collective behaviour in complex organizations operating in safety critical domains - and that is a potentially interesting angle to explore. However, it has fallen short of delivering a convincing presentation of a solid research project.

Nordic and Nordic-Baltic added value

- **Potential to create benefits for the Nordic and Nordic-Baltic research ecosystem** (such as enhancing scientific excellence; achieving necessary critical mass and/or expertise; building competence; supporting mobility and networking; facilitating early-career researchers' opportunities for building lasting Nordic and Baltic networks and future international careers; enhancing cost-effectiveness by sharing data and research infrastructure; developing or utilising particular Nordic and Baltic strengths or expertise, phenomena or data)
- **Potential to create benefits for Nordic and Baltic societies** (such as addressing needs that are particular to the Nordic and Baltics countries considering similar societal structures, similar challenges concerning climate and biodiversity, shared cultural heritage; providing a strong and quality-assured knowledge base for policymakers, practitioners and other stakeholders; or creating new innovations, patents or solutions that help enhance development and co-operation in the Nordic and Baltic regions)

Theoretically, the value of the project could be high if it was much more concrete. If the project's aims were realised, Nordic societies could benefit from an advanced understanding of how AI tools are used in critical organisations and how this changes the quality of decision-making. However, as the project is vague in how it will achieve this, the added value is relatively limited.

Quality of the research team

- **Experience, expertise and merits in relation to delivering the proposed research**
- **Complementarity of the participants and extent to which the consortium as whole brings together the necessary expertise including interdisciplinary perspectives and involvement of early career researchers**

The project brings together researchers with strong interdisciplinary experiences themselves, while also sharing a common background in organization studies and information systems. This common ground is helpful to keep the focus and make rapid progress, and is also relevant and appropriate for the research project at hand. Possibly, someone with a psychology background could have helped given the topic of the proposal, but some members seem knowledgeable about this field already. The team is a mix of very experienced and less experienced scholars, which also brings opportunities for learning across the members and their respective institutes.

Feasibility

- **Quality and effectiveness of the work plan, including extent to which financial and personnel resources are appropriately assigned in line with the objectives and deliverables**
- **Appropriateness of the management structures and procedures, including risk management**

The description of the project is too vague to be feasible in its current form. It is not clear what will be done and when a project stage will be completed. For example, "synthesizing the dialectical nature of mindfulness and mindlessness in high-stakes decision-making with AI assistance requires an interdisciplinary perspective and a contradiction management approach". There is no way to judge when this step of the research strategy plan will be completed.

The planning is not concrete enough and the Gantt chart lacking detail. The proposal mentions the involvement of stakeholder from critical industries in the project but there is no budget calculated to engage stakeholders.

Communication and knowledge exchange

- **Quality of plans for communication, dissemination and knowledge exchange including the extent to which such activities align with project objectives and target relevant stakeholders**
- **Quality of open science practices in terms of sharing research data and outputs**

The plans for communication, dissemination, and knowledge exchange are clear, but tend to focus on the academic community, while the proposal also states that "Collaboration with industry and educational stakeholders is embedded throughout the project." However, it is rather unclear which stakeholders are targeted and through which activities.

Concluding comments to support the overall grade

This proposal addresses a highly relevant and timely research question, supported by an interesting theoretical framework. The research team is experienced, interdisciplinary, and rooted in organisation studies and information systems, which strengthens feasibility, and the commitment to stakeholder engagement is a positive feature. However, the proposal remains underdeveloped in important respects. The research plan, methods, and expected outputs are described only vaguely, and the concrete steps needed to implement the project are insufficiently specified. While the topic is compelling and the overall direction promising, the lack of detail and clarity limits the potential contribution. Overall, the project shows some strengths but also moderate weaknesses, making only a partial contribution to the aims of the initiative.

17. Volunteerism in large-scale crises and a civil defense

Svenske Vetenskapsrådet (Swedish Research council)

2025

Beredningsgruppens yttrande

Betyg för de olika bedömningskriterierna gällande ansökan framgår av detta yttrande. Se även en beskrivning av betygens innebörd ovan.

Alla ansökningar genomgår en bedömning av vetenskaplig kvalitet och granskas individuellt av minst tre ledamöter. För att ge utrymme åt mer djupgående diskussioner av de ansökningar som har en rimlig chans att beviljas finansiering, diskuteras inte alla ansökningar i detalj på beredningsgruppens andra möte. De ansökningar som inte diskuteras utförligt är de som ledamöterna vid den individuella granskningen har bedömt ha lägst kvalitet bland gruppens ansökningar. Dessa ansökningar erhåller inte specifika skriftliga kommentarer tillsammans med betygen.

Grades for the different assessment criteria for the application can be found in this statement. See also a description of the meaning of the grades above.

All applications are assessed regarding scientific quality and are reviewed individually by at least three members. To allow for more in-depth discussions on applications with a reasonable chance of being funded, not all applications are discussed in detail at the review panel's second meeting. The applications that are not discussed thoroughly are those that the panel members during their individual review have assessed having the lowest quality among the panel's applications. These applications do not receive detailed written comments alongside the grades.

Subject	Re: Technical Assessment of FIER Extension: Letter of Approval
---------	--

Message

I am very pleased to inform you that the Monitoring Committee approved the extension request for the project **Flooding, Infrastructure, Evacuation, Resilience [FA]** (FIER) at its meeting on **09/10/2025**.

The amount of **38.446 €** in Norwegian funding is approved.

The comments of the Monitoring Committee were:

The extension is approved. The Monitoring Committee recommends that the project partnership takes the recommendations for improvement outlined in the technical assessment into account during implementation. The JS will monitor the take-up of recommendations during implementation.

Date of eligibility is set at **09/10/2025**

The extension request can only be implemented once a currently open report and/ or change request has been finalised.

Please do not hesitate to contact the Joint Secretariat if you have any questions on this.

Yours sincerely,

Christian Byrith

Head of Secretariat

(Not signed, automated message by NSRP/VIB OMS)

General information:

The programme has a formal complaint procedure against decisions taken by programme authorities during the project assessment and selection process. The complaint needs to be lodged in writing by e-mail to the secretariat of the programme within 14 calendar days of the Lead Partner being officially notified of the results of the project selection process. Find more information here:

<http://northsearegion.eu/project-information/programme-manual/application-procedures/complaint-procedure/>.

Please note that this letter is being sent on behalf of the Monitoring Committee for the North Sea Programme. The secretariat of the North Sea Programme carries out all managing authority functions, except the formal communication with the European Commission, as agreed between Danish Business Authority and Central Denmark Region in accordance with section 7.2 of the North Sea Interreg Programme.

You are welcome to contact the secretariat in order to obtain further advice. Alternatively, please contact your National Contact Point for further information and advice. Contact information can be found on the North Sea Programme website.

19. INNØVER - Innovasjon i Cybersikkerhet Gjennom Praktiske Øvelser for Bedre Digital Resiliens

Research Council of Norway

2025

Karaktersammendrag - NCC-NO: Innovasjonsstøtte til morgendagens cybersikkerhet

Prosjektnummer: 357618
 Prosjekttittel: Sikkerhetsopplæring for Mestring og Bevissthet (SMB)
 Prosjektansvarlig: LØRN AS
 Prosjektleder: Stella Correa
 Saksbehandler: Lasse Gullvåg Sætre

Vurderingskriterier	
Kvalitet	6
Virkninger og effekter	7
Gjennomføring	6
Hovedkarakter	6

Hovedvurdering: Søknaden svarer svært godt på utlysningen. Den har få, uvesentlige, mangler.

Kvalitet

Ekspert 1	5	Det eksisterer mange digitale sikkerhetsopplæringsmoduler og det er usikkert om dette konseptet vil bringe noe nytt i dette markedet. Prosjektet har forøvrig klare mål og virker gjennomtenkt. Den planlagte leveransen kan bli som forventet og sikkert være en konkurrent i markedet.
Ekspert 2	7	
Ekspert 3	7	Konseptet er gjennomtenkt og det gis troverdige formuleringer av målsettingen om å bygge vyberresiliens gjennom å øke bunnivået hos SMBer. Dette er en kjent og reell problemstilling som forankres godt i både akademisk litteratur og i kunnskap fra praksisfeltet. Selv om konseptet ikke nødvendigvis er nyskapende i seg selv, ligger det innovasjon i å koble "nye" former for læring med "gamle" behov i praksisfeltet.

Virkninger og effekter

Ekspert 1	6	Det forventes et ferdig konsept som senere kan innlemmes i utdanningmoduler som selskapet leverer. Sikkerhetsopplæring er et krav i de fleste bedrifter og markedet anses som stort. Det planlegges formidling på nettside og i akademiske artikler (artikkel). Dersom dette konseptet vinner frem kan det gi forventet virkning.
Ekspert 2	7	
Ekspert 3	7	Prosjektet har tydelige formuleringer av forventede virkninger på ulike nivå. Prosjektet tar sikte på å løfte både forskning og praksis og kan bidra til å bygge bro mellom de to domeneene. Det angis videre tydelige kriterier for evaluering, både av de praktiske og akademiske målene. Prosjektet er orientert mot et klart avgrenset og viktig segment (SMB), og presenterer konkrete og realistiske kanaler for kunnskapsdeling og -anvendelse. I forlengelsen av prosjektet lanseres det også et potensielt viktig initiativ rettet mot utdanningssystemet som kan ha stor innvirkning på tilgjengeligheten av fremtidige eksperter på området.

20. DCCRR - Developing collaborative capacity for climate risk resilience

Research Council of Norway

2025

Prosjektvurdering – Karaktersammendrag og administrasjonens vurdering av relevans

Prosjektnummer: 358720

Prosjekttittel: Developing collaborative capacity for climate risk resilience

	Vurderingskriterium	Karakter
1	Forskningskvalitet	4
2	Virkninger og effekter	5
3	Gjennomføring	4
4	Relevans for valgt tema	
	Hovedkarakter*	

Karakterskala: 7, 6, 5, 4, 3, 2, 1 (7 er best)

*) Hovedkarakter er et uttrykk for hvor godt prosjektet oppfyller intensjoner og formål for søknadstypen med utgangspunkt i bedømmelsen av de ulike kriteriene. Hovedkarakter 3 eller lavere forteller at prosjektet har en avgjørende svakhet i form av karakter 3, 2, 1 på minst ett av kriteriene. "Relevans for utlysningen" betegnes "ikke vurdert" dersom søknaden ligger under administrativ terskel for en fullstendig behandling av søknadene.

Karakterene er en del av underlaget ved det besluttende organs behandling av søknaden.

Assessment of grant application submitted to the Research Council of Norway

Grant application

Project title	Developing collaborative capacity for climate risk resilience
Project manager	Munkvold, Bjørn Erik
Project owner	UNIVERSITETET I AGDER
Application type	Collaborative and Knowledge-building Project / Collaborative Project
Topic	Societal security and preparedness
Programme/Activity	Kompetanse og samarbeid 2025
Case officer	Linda Jarrett

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See information about assessing grant applications.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for Research Council of Norway, including the requirements for confidentiality. I/We understand that I/we are not permitted to use content from the application or assessment text into online services, such as ChatGPT. See information about assessing grant applications.	Yes
I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence	4
Impact	5
Implementation	4

Criteria

Excellence

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.
 - Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.
- Appropriate consideration of interdisciplinary approaches.
- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.
 - The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

This project seeks to develop the capacity of local authorities to assess and manage the cascading and multisectoral risks from weather hazards. The topic is an important one that is being addressed by a growing literature on multi-hazard risk assessments, but this proposal does not particularly engage with that literature. Nor does it position its case as somehow advancing related literatures on adaptive capacity or multi-level environmental governance, which might also be relevant to the project at hand. The empirical methods to be used in this single case study are adequately described and the participatory approach relatively novel, even if the analytical scope of the project is a bit vague. What is meant by 'climate resilience' for example? How-- and by whom-- should that be defined? The relationship between the 3 analytical levels (political, organizational, ICT) might also have been elaborated better. Another weakness is that the selection of the case study itself has not been conceptualized in such a way that it would provide a basis for wider generalization, either to other municipalities in Norway or beyond. The research design will yield robust results about its case, but limited wider insight.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Impact

.

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.
- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

The academic impact plan is sound with a handbook, a PhD dissertation and some promises for peer reviewed publication, but the outlets and disciplinary audiences for that work are not entirely clear. As a collaborative project there are some excellent arrangements in place to help the municipality that is the chief research partner. Their active involvement will ensure some strong local impacts from the research. Plans for producing societal impacts beyond that audience are more limited

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Implementation

.

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The project team looks to have appropriate skills to deliver the project. The PI is an experienced researcher specializing in emergency management. He is supported by other team members with complimentary skills, though there were also concerns about whether the PhD candidate is expected to take on too much responsibility for research and dissemination, potentially imperiling project deliverables (as well as impeding that person's professional development trajectory). Otherwise, the work packages are well detailed in terms of planned activities. However, the deliverables do not clearly indicate how each research question is addressed, nor which deliverables correspond to the expected results. A picture of the dependencies of WP is also missing. The project board should help support the research team in project management and help with dissemination and impact

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Special points to consider

Comments to special points to consider

21. IMPACT: Empowering Youth for Critical Incidents

Research Council of Norway

2025

Prosjektvurdering – Karaktersammendrag og administrasjonens vurdering av relevans

Prosjektnummer: 358999

Prosjekttittel: Empowering Youths for Critical Incidents (IMPACT)

Summary of marks

Criterion	Mark
Excellence	6
Impact	5
Implementation	6

Criteria

Excellence

.

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.

- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.

Appropriate consideration of interdisciplinary approaches.

- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.

- The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

This proposal contains considerable originality and promise of innovation especially in terms of the development of a 'serious game' that might be used to support the development of a 'resilient school'. The proposal is ambitious, especially in terms of co-creation, and the limits of the Delphi method are well articulated. However, the proposal could have said more about the characteristics of the chosen age group, the types of crisis that are of interest and the ways in which the multiple major theoretical interests would be reflected in the applied research and the long-term application of the AI-game in the designated context. Overall, however, the ambitions are to be lauded as they go beyond the state of the art.

Selected mark : 6 - Excellent

The proposal successfully addresses all relevant aspects of the criterion. Only minor shortcomings are present.

Impact

.

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.
- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

The potential for impact in terms of the project being directed both at individual students and at schools is very noteworthy, as is the involvement of different relevant stakeholders. It is also noteworthy that the proposal highlights commitment towards the long-term resourcing of the game so as to ensure its viability. The academic impact could have been specified further. At the same time, the proposal needed to consider further the particular challenges of introducing such a tool into the school context and making its implementation more than just a one-off. Potential barriers to successful and long term implementation needed to be considered further.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Implementation

.

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The proposal is very strong in terms of its interdisciplinarity. The different competencies are well-discussed and overall the collaboration across different stakeholders is noteworthy. Somewhat more could have been said in terms of overall project management given the highly diverse and ambitious objectives of the different Work Packages, and some further support for the PI may be considered.

Selected mark : 6 - Excellent

The proposal successfully addresses all relevant aspects of the criterion. Only minor shortcomings are present.

Special points to consider

Summary of marks

Criterion	Mark
Excellence	4
Impact	5
Implementation	5

Criteria

Excellence

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.

- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.

Appropriate consideration of interdisciplinary approaches.

- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.

- The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

The project aims to develop multi-hazard early warning systems to enhance emergency preparedness and thus societal safety and resilience, with a well-written and innovative proposal of high societal relevance. It integrates sensing technologies, explainable AI (XAI), and decision support tools, supported by concrete case studies and a strong interdisciplinary consortium. However, the proposal lacks some details, hindering evaluation. Key issues include:

- **Undefined Concepts:** Terms like "potential cascading effects" are mentioned without specifying types or impacts.
- **Lack of Specificity:** The proposal does not detail sensor types, parameters measured, parameter uncertainty, or the specifics of physics-based predictive models for hazards.
- **XAI Model:** There is no clarity on XAI model training, input/output data, spatial/temporal resolution, or real-world testing and validation. The difficulty of training AI/XAI models on (per definition) rare natural hazard events and data availability is not addressed.
- **Methodological Weaknesses:** Data fusion, uncertainty quantification, and hazard interaction methodologies lack detail on techniques or benchmarking. Decision support system design (e.g., AI-based or multi-criteria approaches) is vague.

Stakeholder Engagement: While the need for DSS is clear, the proposal does not provide insight into whether these will be only AI-based, or it will rely on multi-objective optimization systems, Multi-Criteria Decision Analysis or other structured decision-making tools. Stakeholder collaboration and uncertainty quantification tasks are only briefly described, lacking emphasis on sustained engagement or comprehensive uncertainty analysis.

While ambitious and strategically structured, the proposal's scientific depth and methodological clarity need improvement for a robust evaluation.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Impact

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.
- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

The proposed project has high potential impact, developing an emergency response and multi-hazard early warning system that enhances capacity building. It addresses national challenges (e.g., Hans extreme rainfall) and aligns with international frameworks like the SDGs and Sendai Framework for Disaster Risk Reduction. Key outputs include open-access datasets, AI models, decision-support tools, and integration into platforms like Varsom, supported by a clear implementation pathway and educational components involving MSc students. The communication strategy effectively targets diverse audiences (researchers, public authorities, communities) through workshops, publications, podcasts, and accessible materials, with a strong commitment to open science via data and code sharing. However, the proposal lacks detail on long-term sustainability, maintenance, and funding of the tools post-project, as well as strategies to ensure community trust and understanding of the system.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Implementation

.

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The project team and management are well-equipped to execute the project, with a strong consortium of experienced partners from academia, research institutes, and public administration. The project manager and work package (WP) leads have robust expertise, and the consortium's complementary skills enhance the proposal. Task allocation is logical, the timeline is realistic with clear milestones and deliverables, and the management plan is adequate. However, the proposal could improve by providing more details on internal governance, such as WP coordination and conflict resolution. The Principal Investigator (PI) has a strong publication and citation record in Geotechnical Engineering, Georisk analysis, and Machine Learning. The consortium is heavily academic, with limited stakeholder involvement.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Comments to special points to consider

23. DronePreparedness - Support Service for Drones in Preparedness

Research Council of Norway

2025

Project assessment – Summary of marks and the administration’s assessment of the relevance criterion

Project number: 358457
Project title: DroneBeredskap - Støttetjeneste for Droner i Beredskap

	Assessment criterion	Mark
1	Excellence	5
2	Impact	5
3	Implementation	5
4		
	General mark*	5

Scale of marks: 7, 6, 5, 4, 3, 2, 1 (7 is best)

*) The general mark is a measure of how well the project proposal fulfils the intentions and purposes of the relevant type of grant (application type) based on consideration of the various criteria.
A general mark of 3 or lower indicates that the project has a fundamental weakness which is noted as a mark of 3, 2, 1 or C given for least one of the criteria. "Relevance to the call for proposals" is defined as "not assessed" if the grant application falls below the threshold set for a complete administrative review of the grant applications.

The marks form part of the basis for the review of grant applications in connection with the final decision-making process.

Assessment of grant application submitted to the Research Council of Norway

Application type	Collaborative and Knowledge-building Project / Collaborative Project
Topic	Societal security and preparedness
Programme/Activity	Kompetanse og samarbeid 2025
Case officer	Vita Melinauskaite

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See information about assessing grant applications.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for Research Council of Norway, including the requirements for confidentiality. I/We understand that I/we are not permitted to use content from the application or assessment text into online services, such as ChatGPT. See information about assessing grant applications.	Yes
- I/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence	5
Impact	5
Implementation	5

Criteria

Excellence

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.

- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.

Appropriate consideration of interdisciplinary approaches.

- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.
- The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

The proposal aims to establish a Regional Drone Preparedness Consortium in South-Eastern Norway to support first responders in utilizing drone technology for emergency response. The project demonstrates novelty in creating a structured approach to standardize and integrate drone operations into emergency response protocols, which goes beyond current fragmented implementations.

The proposal clearly identifies gaps in the current state-of-the-art, comparing Norway's current drone usage with more advanced implementations in countries like Belgium. The project shows creativity in how it plans to develop comprehensive frameworks for training, operational guidelines, and real-time data transmission solutions.

Minor shortcomings include somewhat limited discussion of specific technical innovations beyond existing technologies, though the integration and standardization aspects are well-defined.

The research questions and objectives are clearly specified, focusing on practical implementation challenges. The project employs appropriate methodological approaches, including Viable System Modeling to analyze structural challenges in emergency management.

The research questions address the knowledge gaps appropriately, and they are linked with the workplan. However they are not adequately specified – e.g. RQ1 is a research question that addresses the whole project and it is not clear how it will be specifically addressed within the workplan.

The interdisciplinary approach is clearly visible from the proposal since both technical, logistical and regulatory challenges aim to be addressed. However, the theoretical approach is described in a limited manner. It is not clearly described which theoretical areas will be addressed nor which scientific methods will be applied. This is considered a major shortcoming.

Although the project activities are flagged as 'industrial research', there is a general definition of the research questions which will be investigated. However, it is not entirely clear what standardized research designs (if any) are going to be used to answer them, given that the proposed research is industrial in nature.

The project shows good consideration of interdisciplinary approaches by combining expertise in technology, emergency management, and organizational systems. The project adopts a multi-stakeholder approach strengthens the project's ability to address complex challenges.

There is appropriate consideration of ethical issues, and stakeholder knowledge. The project has a clear plan for involving end-users throughout the process, ensuring that developed solutions address real operational needs. Yet, gender and social responsibility questions could have been given further attention.

Overall a very interesting and well-designed project proposal, aiming to significantly enhance the short-term and long-term drone preparedness of Norway. The project objectives are adequately described and they are original and innovative in nature. The potential for the development of useful knowledge (of all types) is significant.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Impact

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.
- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

The proposal demonstrates excellent potential impact by addressing critical emergency response challenges through drone integration. It will produce openly accessible operational guidelines and training programs that address important sectoral needs in Norwegian emergency services. The project shows clear value creation potential by improving situational awareness, reducing response times, and developing standardized protocols that can inform regulatory frameworks.

The proposal explicitly connects to SDGs 11 (Sustainable Cities), 9 (Innovation), and 13 (Climate Action) by enhancing disaster resilience and response capabilities. Impact pathways are clearly articulated with logical short-term outputs and long-term outcomes.

The communication strategy outlines scientific publications, workshops, and a dedicated website, yet open science practices could have been more extensively elaborated. The project outlines comprehensive stakeholder engagement through WP4, including demonstrations, training programs, and policy recommendations.

The consortium partners are well-integrated in the dissemination strategy, with end-users participating in testing, academic partners leading publications, and industry partners providing technical expertise. Minor shortcomings include limited details on data management plans and the lack of targeted quantities of impact indicators.

The proposal successfully addresses all relevant impact criteria with only minor shortcomings. It demonstrates exceptional potential to transform Norwegian emergency response capabilities through systematic drone technology integration.

The project activities has the potential to generate added value to all societal stakeholders. The main challenge which is difficult to address at this stage is the formal integration of the project's results in the regulatory framework of Norway. However, such a need has been formally expressed by the Norwegian authorities.

Value creation for the industry could have been more extensively described – purely stating that new market opportunities will be opened is not specific enough. Value creating for the public and society is appropriately addressed by providing high impact examples related to general preparedness.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Implementation

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The project manager, Fabio Andrade (NORCE), demonstrates relevant expertise with a PhD in Engineering Cybernetics and experience managing the AutonoWeather project (2020-2022). His background in drone technology since 2011 and participation in multiple Norwegian and European research projects provides a solid foundation for leading this initiative.

The project group exhibits strong complementarity, combining expertise in: Drone technology and autonomous systems (NORCE, USN), Risk management and emergency response (BI, INN), Fire and rescue operations (VIBR), Search and rescue activities (Red Cross, Redningsselskapet), and Technical implementation (Norse Asset Solutions)

The team includes accomplished researchers alongside practitioners with direct emergency response experience. This balance of academic and practical expertise is well-suited to the project's objectives of developing implementable drone solutions for emergency response.

The project is logically organized into five work packages with clear progression. However, details are missing on the task level.

While WP5 has planned an activity for planning use-cases, it would be expected that already in the proposal phase

an outline of these use cases is known in order to efficiently plan for the work package.

Resource allocation appears appropriate, with balanced distribution among partners across work packages.

The governance structure includes a project board, WP leaders, and an advisory committee, providing clear management oversight. Each partner has defined roles aligned with their expertise—academic partners lead research activities, emergency services contribute operational knowledge, and industry partners provide technical support.

Minor shortcomings include somewhat limited information on risk management strategies and conflict resolution mechanisms. Additionally, the timeline for establishing the National Drone Preparedness Consortium (milestone in Q3 2027) could benefit from more detail on the transition process from regional to national implementation. The duration of WP2 for a 2,5 year project is a exaggerated, especially compared to the capacity building work package.

The proposal demonstrates a well-qualified project team with complementary expertise and effective organizational structure. The minor shortcomings do not significantly impact the overall quality of the project management approach.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Summary of marks

Criterion	Mark
Excellence	5
Impact	4
Implementation	5

Criteria

Excellence

The extent to which the centre is ambitious, innovative and moves the research frontier

- Scientific creativity and originality.
- The extent to which hypotheses and research questions are innovative and bold.
- The extent to which the centre has the potential to generate new knowledge that moves the research front, including significant development/renewal of theory, methods, experiments or empirical knowledge.
- The extent to which the centre's research is relevant to innovation and has potential for development of innovations that address the current and future needs or market opportunities of user partners in the private or public sectors.

The quality of the centre's R&D activities

- The quality of the research questions, hypotheses and the centre's objectives, and the extent to which they are clearly described.
- The extent to which the theoretical approach, research design and choice of method are credible and appropriate, and interdisciplinary approaches have been adequately assessed.
- The extent to which the centre takes satisfactory account of social responsibility, ethical issues and the gender dimension in research.
- The extent to which the centre relates to users/stakeholders' knowledge in a satisfactory manner.

The SERENE proposal addresses a highly significant and urgent societal challenge: strengthening digital resilience in the face of cyber and hybrid threats to critical infrastructure. The panel recognizes that this is a timely and nationally important priority, with strong relevance also at regional and international levels.

The proposal is ambitious and offers opportunity for scientific creativity by combining socio-technical perspectives, complex systems theory, and cross-sectoral approaches across domains such as e-health, energy, and maritime.

The introduction of concepts such as Cyber-Physical Social Systems (CPSS) and Mission-Critical Ecosystems (MCE) shows awareness of current societal challenges, and show unique awareness and has the potential to move the research frontier. The identification of knowledge needs through workshops and stakeholder engagement is also a strength, and these are generally well-linked to the objectives and research questions.

The breadth of the centre's scope is very high, and while this ambition is laudable, it risks limiting theoretical depth and making integration across work packages and partners challenging. The proposal does not a convincing case concerning how integration should be managed. Methodological descriptions are often vague or scattered, with hypotheses and research questions that at times appear incremental rather than transformative. The novelty of the proposed approaches is not always convincingly articulated, and more detail is needed on how methodologies will be operationalised and validated. There are also questions about the transferability of results across sectors with different regulatory and operational contexts.

With respect to impact, the proposal has strong potential for generating knowledge of societal relevance and for engaging partners. However, mechanisms for ensuring broad dissemination and adoption outside the consortium are less clearly developed. Ethical, social, and gender aspects are addressed, but in some cases more as add-ons than as fully integrated dimensions of the research design.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Impact

Potential impacts of the proposed research

- The extent to which the centre's planned results can contribute to addressing important scientific challenges, both now and in the future.
- The extent to which the centre's planned results can respond to important challenges in the sector(s), both now and in the future.
- The extent to which competence development and the centre's planned results will provide a basis for value creation in Norwegian industry and/or the public sector.
- The extent to which the centre's Planned results are relevant to the UN Sustainable Development Goals or have the potential to contribute to addressing other important societal challenges, both now and in the future.
- The extent to which the potential impacts are clearly formulated and credible.

Communication and utilisation

- The extent to which appropriate practice for open research is an integral part of the project to ensure open sharing and extensive access to research results.
- The quality and scope of communication and involvement activities aimed at relevant stakeholders/users.
- The extent to which the partners are involved in the work of utilising the centre's results.

The center demonstrates strong awareness of important scientific challenges today but lacks the ability to also highlight the research needs of the future. On the other hand the project has shown important challenges in the sector both now and in the future. The project has failed to assess the potential of possible innovations within the project's field. They has not succeeded in demonstrating a clear pathway for the commercialization of parts of the results. The UN Sustainable Development Goals are mentioned but not in depth elaborated. The potential impacts are relevant but h not clearly formulated. However, some of the impact pathways are presented in very broad terms, making it harder to see exactly how new theory will translate into measurable scientific breakthroughs. The dissemination described is conventional. An concern is the level of detail in the plans. Dissemination is described as 'In addition, SERENE's research will be disseminated through professional network involvement by arranging stakeholder meetings, co-creation workshops, and by participating in industry events. But these are non-specific. Relevant industry events should be specified in more detail.

Selected mark : 4 - Good

The proposal addresses the criterion well. A number of shortcomings are present.

Implementation

The quality of the project manager (centre director) and project group

- The extent to which the project manager (centre director) has relevant expertise and experience and is qualified to lead an initiative of this size
- The extent to which the project participants complement each other, and to what extent the project group possesses the necessary expertise to implement the centre initiative effectively.

The quality of the centre's organisation and management

- The extent to which it provides added value that the research activities are organised as one centre rather than several separate projects.
- The extent to which the centre will be organised effectively, including whether the resources allocated to the various work packages are adequate and in accordance with the centre's objectives and deliverables.
- The extent to which the tasks in the centre are distributed in a way that ensures that all project participants have a clear role and sufficient resources to fulfil this role.
- The extent to which management and governance in the centre are appropriately organised, including risk management and innovation management.
- The extent to which the partners contribute to the management and implementation of the centre.

The quality and degree of international cooperation

- The extent to which the scope and quality of the international cooperation activities are in line with the centre's objectives.

Gender balance in the centre's project group

- If there is poor gender balance in the centre's management team (centre director and research managers), the extent to which plans to support the development of research talents of the underrepresented gender towards qualification for senior-level positions are appropriate.

The project has a planned organization and an intended leadership that are deemed well capable of managing the project. They possess both scientific knowledge and expertise, as well as previous experience in project management. The project group brings together complementary technical, organisational, and social science expertise, which is a major strength. There are shortcomings in how the parts of the project can be viewed as a whole, but there is a clear and strong ambition that the center should be greater than the sum of its parts. The center's planned work packages and knowledge dissemination are at a high level of abstraction, and it is not entirely clear how each partial result will contribute to the whole, and this could be formulated more clearly. The risks are somehow generic, while some risks are not considered. E.g. 1, the difficulty of hiring 17 PhD/Postdocs in time is not considered. E.g. 2, The risk "Loss of key personnel" is broad, and the same mitigation strategy cannot be applied to different profiles (PhD, senior researcher, management, etc.). Overall, the quality and degree of international cooperation is sufficiently outlined, but focused on 3 international research partners and a limited range of user partners. Thus, the extent to which the scope and quality of the international cooperation activities are in line with the centre's objectives is sufficient but limited. Gender balance in the centre's project group is exceptionally well set up and gender balance is described as a core policy in the centre's management. In addition, plans to support the development of gender balanced research talents are appropriate.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Quality of the project design and implementation	20.0
Quality of the partnership and cooperation arrangements	17.0
Impact	19.0
Total:	76.0

Comments for the applicant
• The project is strongly aligned with Erasmus+ priorities, addressing climate change and digital transformation through AI in disaster response. • While not explicitly promoting EU values, the project supports community well-being, indirectly reinforcing shared European principles. • The consortium has strong academic and technical expertise, though there is some overlap that could be streamlined or better distinguished. • Needs analysis is present, but would benefit from quantitative data and specific references to better justify the project's focus. • The project fosters interdisciplinary collaboration between environmental science, digital skills, and education sectors. • Applying AI to disaster resilience is promising; however, clearer differentiation from similar existing projects would improve innovation. • The proposal builds on previous work; stronger connections to past projects would further support its continuity and relevance. • EU-level added value is evident but could be more clearly articulated by showing the benefits of transnational collaboration. • Objectives are clearly defined and well-aligned with partner goals and key EU priorities in climate and digital education. • The methodology is well-structured with defined work packages and indicators, showing good planning and evaluation commitment. • While the plan is solid, budget allocation could be more cost-effective; certain tasks may be achieved with fewer resources. • The project includes accessibility and inclusive design, especially for marginalized groups, which adds social value. • Digital tools and green practices are integrated; a greater emphasis on environmental elements within activities would strengthen impact. • Training and learning activities are appropriate and support the project's overall goals. • Recognition methods are in place, though referencing ECTS micro-credentials would improve alignment with EU standards. • The consortium is diverse and experienced, though newcomer involvement is limited to one less-experienced organization. • Task distribution reflects partners' strengths; further detail on specific prior experience would enhance the rationale for assignments. • Coordination is well planned; adding specifics on communication tools, frequency, and decision-making would improve transparency.

Project Code:	2025-1-CY01-KA220-HED-000361487					
Action Type:	KA220-HED - Cooperation partnerships in higher education					
Agency:	CY01 - Foundation for the Management of European Lifelong Learning Programmes					
Call:	2025	Round:	1	Date:	20-05-2025	

- Partner benefits are implied; more clearly stating expected gains like curriculum enrichment or skill-building would reinforce value.
- The project has strong impact potential through digital resources, practical tools, and wide target group outreach.
- Long-term integration of results into institutional practices could be better defined to ensure deeper and sustained impact.
- Dissemination is proactive; adding specific sustainability measures for outputs post-project would improve the long-term vision.
- KPIs are in place; complementing these with metrics tied to institutional change or sector impact would add strength.
- Stakeholder engagement is planned; more detail on how this will drive broader, lasting impact would enhance the proposal's reach.

Call:	2025	Round:	1	Date:	20-05-2025	

II. ASSESSMENT

Relevance	Score
The proposal demonstrates significant strengths in its relevance to the objectives and priorities of the Erasmus+ programme. It clearly articulates the aim to develop an “AI framework for better disaster prevention and response, addressing climate change challenges” and to foster “digital skills and innovation” among young scientists. This directly aligns with the programme’s broader goals of promoting digital transformation in education and training and addressing societal challenges such as climate change and environmental sustainability. Furthermore, the project’s focus on natural disasters is pertinent in the current global context, lending further weight to its relevance. The topic as it stands only indirectly promotes EU values. While not explicitly detailing the promotion of values like human dignity or democracy, the project’s focus on mitigating the impact of natural disasters can be seen as contributing to the well-being and safety of communities. The profile, experience and activities of the participating organizations are relevant to the project’s objectives. More specifically, European University Cyprus and Democritus University of Thrace bring strong academic and research capabilities, particularly in disaster risk management. SciFY, as an NGO, adds expertise in AI-driven solutions and community engagement. University of Ljubljana and University of Agder provide additional academic and technical expertise in environmental sciences and emergency management. Nevertheless, some overlap of expertise exists among the participating organizations. Needs analysis is in place and generally adequately developed. However, it lacks specific quantitative data which will quantify the needs. This could include referencing specific data or reports that highlight the identified gaps and needs within the target groups and participating organizations. The proposal is suitable for creating synergies between different fields of education and training. More specifically, it has potential to impact higher education and training in digital skills development and environmental resilience. The proposal merits some innovation by applying AI to disaster resilience. However, it does not sufficiently differentiate itself from existing AI applications in disaster management. A search on the web reveals several similar attempts. The proposal builds on the existing expertise of the consortium members in AI, disaster management, and education, making it complementary to their past initiatives. Some further details regarding its connection to the past projects would be beneficial. The proposal has the potential to bring added value at EU-level. However, this could be made more explicit by detailing how the transnational cooperation will lead to results that could not be achieved by activities carried out in a single country.	20.0
Quality of the project design and implementation	Score
The project objectives are clearly defined and align well with the needs of participating organizations and target groups and align with EU priorities on digital transformation and climate action. The proposal outlines a structured approach with clear work packages, including needs assessment, curriculum development, online course creation, training delivery, and quality assurance. The proposed activities appear appropriate for achieving the project objectives, with a blend of research, development, and practical training. The inclusion of quantitative and qualitative indicators for measuring the achievement of work package objectives demonstrates a commitment to monitoring and evaluation. Furthermore, the establishment of a Project Management Team (PMT) with regular meetings and reporting mechanisms suggests a sound management structure. The proposal also acknowledges the importance of a Quality Assurance and Evaluation Framework, aligning with Erasmus+ KA2 guidelines. The budget as it stands is not cost-effective. Various phases of the project could have been completed using fewer funds.	20.0

Project Code:	2025-1-CY01-KA220-HED-000361487					
Action Type:	KA220-HED - Cooperation partnerships in higher education					
Agency:	CY01 - Foundation for the Management of European Lifelong Learning Programmes					
Call:	2025	Round:	1	Date:	20-05-2025	

The proposal refers to accessibility and inclusivity, by providing digital education and AI training. It outlines a Universal Access Strategy applying universal design principles, multilingual resources, flexible learning formats (synchronous/asynchronous), and active involvement of marginalized groups (e.g. people with ASD, mental health challenges).

The project effectively integrates digital tools and learning methods and General green practices are mentioned in the proposal. However, these practices could be highlighted and enhanced further within project activities.

Training, teaching or learning activities are appropriate for the project's objectives.

The project includes a plan for recognition and validation of learning outcomes. Participants will receive certification based on performance in quizzes, assignments, and final assessments while the curriculum is based on both academic and industry standards. However, there is no explicit reference to ECTS micro-credentials, which would enhance recognition across Europe.

Quality of the partnership and cooperation arrangements

Score

The consortium includes a diverse mix of organizations, bringing together academic, research, and non-profit expertise, which supports the project's objectives. The project includes a mix of experienced and less-experienced organizations, but newcomer involvement is limited (only one less-experienced organization is involved).

The proposal presents a structured allocation of tasks, ensuring that each partner contributes to the project objectives. The complementarity of the participating organizations is evident, with European University Cyprus (EUC) taking on project management and dissemination, the University of Ljubljana (UL) leading research and needs analysis, SciFY responsible for educational content development, and Democritus University of Thrace (DUTH) in charge of pilot training. This division of responsibilities suggests a strategic approach to leverage the diverse expertise within the consortium, which is a significant strength.

17.0

However, while the proposal outlines the roles of each partner, the section on partnership and cooperation could be strengthened by providing more explicit details regarding the specific expertise and previous relevant experience of each organization that directly aligns with their assigned roles. While UL's background in disaster risk reduction is mentioned in the relevance section (as noted in our previous conversation), a similar level of detail concerning SciFY's expertise in developing interactive learning modules or DUTH's experience in delivering training programs would enhance the assessment of the partnership's capabilities. Additionally, the potential benefits for each participating organization stemming from their involvement in the project could be more explicitly articulated. While learning and knowledge exchange are implied, detailing specific gains such as enhanced research capabilities, expanded networks, or the development of new educational resources for each partner would further justify the consortium's composition.

Impact

Score

The proposal demonstrates a clear vision for producing impact on various levels. The identified target groups, including university students, vocational learners, and professionals in disaster management, suggest a broad reach for the project's outcomes. The proposal outlines plan for creating open educational resources, including an online training course, which have the potential for impact beyond the participating organizations and individuals directly involved. The commitment to disseminating results through various channels, such as Info Days and networking events, also indicates an intention to reach a wider audience. Furthermore, the proposal explicitly addresses how the project aims to equip professionals with practical AI-driven tools to tackle real-world environmental threats, suggesting a potential for tangible impact on the disaster management sector. The inclusion of a dedicated Quality Assurance team and a plan for monitoring KPIs throughout the project life-cycle demonstrates a commitment to assessing whether the project objectives have been achieved, as mentioned in the proposal itself.

19.0

However, the proposal could strengthen its articulation of how the project results will be integrated

Project Code:	2025-1-CY01-KA220-HED-000361487					
Action Type:	KA220-HED - Cooperation partnerships in higher education					
Agency:	CY01 - Foundation for the Management of European Lifelong Learning Programmes					
Call:	2025	Round:	1	Date:	20-05-2025	

into the regular work of the participating organizations. While the creation of new learning materials is a direct output, the long-term impact on the partners' curricula, teaching methodologies, or research agendas could be more explicitly detailed. Furthermore, while dissemination is planned, the proposal could provide more concrete and effective steps to ensure the sustainability of the project's outcomes beyond its lifetime. The potential for the online course to be maintained and updated, and how the developed expertise will be retained within the partner institutions, could be further elaborated. The proposal mentions stakeholder engagement but could provide more detail on how this engagement will contribute to a broader and more lasting impact on the field.

Utlysning: Kvalifisering - Kommersialisering fra offentlig finansiert forskning 2025 Løpende
Prosjekt: SQUARE: Real-time, map-based collaboration for cross-agency crisis management
Prosjektnummer: 361767
Prosjektansvarlig: FAKULTET FOR SAMFUNNSVITENSKAP, UNIVERSITETET I AGDER
Prosjektleder: Kristina Nydal
Adm. ansvarlig: Målfrid Tangedal

Søknaden er innvilget

Vi har gleden av å informere om at Norges forskningsråd, ved områdedirektør for Område for innovasjon i næringsliv og offentlig sektor, har vedtatt å bevilge inntil 500 000 til prosjektet deres. Forutsetningen for å få støtte er at dere reviderer søknaden i samsvar med krav og føringer i utlysningen. Den reviderte søknaden bør sendes inn så snart som mulig.

Søknaden er blitt vurdert av et panel bestående av utvalgte medlemmer av forskningsrådets administrasjon. Det er utlysningsteksten, vurderingskriteriene, kravene til søknadstypen og den faglige vurderingen som samlet sett ligger til grunn for vedtaket. Dere finner en oversikt over innvilgede søknader på [Forskningsrådets nettsider](#).

Betingelser for bevilgning

Tildelingen er gitt i henhold til det som er spesifisert i det omsøkte prosjektet. Dersom det er behov for større endringer, skal dette godkjennes av Forskningsrådet. Dersom det er tenkt at prosjektaktiviteter skal utføres av aktører som ikke er angitt som prosjektdeltakere i søknaden, må det opplyses om dette. Dersom slike aktører er i en avhengighetsrelasjon (f.eks. i konsernrelasjon eller med overlappende eierinteresser) til prosjektdeltakere i søknaden, vil det være knyttet betingelser til slik deltakelse (kostnadsføring, status som samarbeidspartner mv.).

For mer informasjon om krav og forventninger i forbindelse med prosjekttypen, se [nettside](#).

Ta gjerne kontakt med saksbehandler ved spørsmål.

Slik reviderer dere søknaden

Norges forskningsråd/
The Research Council of Norway
Drammensveien 288
Postboks 564
NO-1327 Lysaker

Telefon +47 22 03 70 00
Telefaks +47 22 03 70 01
post@forskningsradet.no
www.forskningsradet.no
Org.nr. 970141669

All post og e-post som inngår i saksbehandlingen, bes adressert til Norges forskningsråd og ikke til enkeltpersoner.

Kindly address all mail and e-mail to the Research Council of Norway, not to individual staff.

Søknaden er lagt ut til revidering på [«mitt nettsted»](#). Søknaden er nå tilgjengelig som "Revidert". Innholdet i den reviderte søknaden danner grunnlaget for kontrakten mellom Forskningsrådet og den prosjektansvarlige hos dere. Les mer om FoU-kontrakter [her](#).

Se over kommentarene dere har fått fra panelet (se vedlegg) og gjør endringer i henhold til dette. Forslag til revideringen skal sendes inn så snart som mulig. Se også over [veiledning til søknadsskjema](#). Kontrakt vil ikke bli generert før den reviderte søknaden er endelig godkjent av saksbehandler.

Skriv en populærvitenskapelig framstilling

I den reviderte søknaden må dere skrive en populærvitenskapelig framstilling på norsk og engelsk. Det er viktig at dere skriver et prosjektsammendrag og en populærvitenskapelig framstilling som er forståelig for personer utenfor det aktuelle fagområdet. Pass på at informasjonen ikke inneholder konfidensielle/sensitive opplysninger.

Legg merke til at vi vil offentliggjøre informasjon om prosjektet i [prosjektbanken vår](#) når vi har godkjent den reviderte søknaden. [Les mer om prosjektbanken og hvordan du kan skrive gode populærvitenskapelige framstillinger.](#)

Slik har vi behandlet søknaden

Søknaden er vedtatt av områdedirektør for Område for innovasjon i næringsliv og offentlig sektor 10.11.2025. Det er utlysningsteksten, vurderingskriteriene og kravene til søknadstypen som ligger til grunn for vedtaket. Søknaden er vurdert av et administrativt panel i Forskningsrådet og deres vurdering er vedlagt.

Begrenset klagemulighet

Forskningsrådets vedtak er unntatt fra forvaltningslovens regler om klagerett, men vi har likevel innført en klageordning som gir dere en begrenset mulighet til å klage. Se mer informasjon om dette på [Forskningsrådets nettsider](#). Legg merke til at dere ikke kan klage på de faglige vurderingene og prioriteringene som ligger til grunn for vedtaket i dette brevet.

Fristen for å klage er tre uker fra dere mottar dette brevet. Klagen må være skriftlig og begrunnet. Det er administrativt ansvarlig ved den prosjektansvarlige institusjonen som skal sende inn klagen.

Har dere spørsmål?

Kontakt gjerne saksbehandler Monica Mariam Jensen på e-post mmje@forskningsradet.no hvis dere har spørsmål om saken. Oppgi prosjektnummer 361767 når dere sender e-post.

Med vennlig hilsen
Norges forskningsråd

Eirik Fosse

Vedlegg – Søknadsvurdering

I tabellen under vil du finne panelets vurdering. Alle søknader får en vurdering på hvert av hovedkriteriene, de søknadene som er gode nok til å tildeles får også en relevanskarakter. Til slutt settes det en gjennomsnittskarakter og en hovedkarakter. Gjennomsnittskarakteren er et gjennomsnitt av de tre hovedkarakterene "Forskning og innovasjon", "Virkninger og effekter" og "Gjennomføring". Det er gjennomsnittskarakteren som avgjør om søknaden får tildeling.

Oversikt karakterer per kriterium:

Forskning og innovasjon 6

Søknaden viser til lovende forskningsresultater som danner et godt grunnlag for prosjektet.

Det er godt forklart hvordan innovasjonen kan gjøre tverrsektorielt samarbeid i forbindelse med krisehåndtering bedre i forhold til dagens metoder, og dette er godt dokumentert i søknaden. Dersom prosjektet lykkes, vil resultatene klart kunne bidra til å flytte state-of-the-art.

Virkninger og effekter 6

Søker demonstrerer en meget god forståelse for markedet utfra hvor man er i kommersialiseringsløpet.

Markedsinnsikt, bruksområder og hvorfor resultatene er kommersielt interessante samt dialog med relevante aktører er meget godt beskrevet.

Realiseringsstrategi er meget godt redegjort for, herunder strategivalg, utfordringer, risiko og rettigheter gitt prosjektets nåværende modenhet. Risikoanalysen er godt beskrevet med konstruktive og spesifikke forslag til mitigerende tiltak.

Samfunnsnytte er godt beskrevet med konkrete henvisninger til FNs bærekraftsmål.

Gjennomføring 5

Prosjektteamet vurderes som faglig- og kommersielt kompetent.

Milepæler og aktiviteter i prosjektplanen er noe forenklet beskrevet, men søker har skissert aktiviteter og leveranser som er greit gjennomtenkt utfra hvor man er i kommersialiseringsløpet.

Det er vedlagt to LOI, som er med på å styrke søknaden.

Relevans for utlysningen 5

Prosjektet svarer meget godt på utlysningens formål og føringer.

Eventuelle ekstra kommentarer i forbindelse med revidering:

Søknadsskjema inneholder mindre feil ref. "Veiledning til utfylling av søknadsskjema":

- TTO-kostnad 200 000 skal føres på kostnadssted 'Andre driftskostnader'.

29. SpAIces: Generative AI for Personalized, Realistic, Inclusive Virtual World Spaces for Education & Training

Horizon Europe (EU)

2025

Proposal Evaluation Form		
	EUROPEAN COMMISSION Horizon Europe (HORIZON)	Evaluation Summary Report - Innovation actions

Call: HORIZON-CL4-2025-03

Type of action: HORIZON-IA

Proposal number: 101299165

Proposal acronym: SpAIces

Duration (months): 36

Proposal title: Generative AI for Personalized, Realistic, Inclusive Virtual World Spaces for Education & Training (SpAIces)

Activity: HORIZON-CL4-2025-03-HUMAN-15

Total:			4,309,181.25		3,993,740.63	

Abstract:

SpAIces will develop, implement, test, and validate an inclusive, secure, human-driven, and ethically grounded virtual world learning spaces demonstrator. The demonstrator will leverage GenAI and XR technologies to enhance education and training through immersive, realistic, interactive scenarios supported by smart digital assistants. It directly responds to the European Commission's Web 4.0 strategy and vision that by 2030 many people will use Virtual Worlds (VWs) daily. It aligns with the EU's Digital Rights and Principles for a human-centric digital transformation and reinforces Europe's digital sovereignty by building on European infrastructure, datasets, and values. SpAIces will also address trust, safety, and inclusion challenges highlighted in the EU's AI Act and GDPR, ensuring that AI-enabled VW learning spaces are open, secure, trustworthy, fair, and inclusive.

SpAIces's objectives are to: (1) elicit, specify, and prioritise user and system requirements to guide the demonstrator and pilot concepts; (2) establish a multi-modular ecosystem with robust, scalable, interoperable cloud-edge infrastructure and develop a functional demonstrator; (3) conduct pilots in industrial training, higher education, and awareness-raising for vulnerable users; (4) develop a research-informed pedagogical model and assess impact on learning, accessibility, inclusivity, and well-being; and (5) build synergies with Horizon Europe initiatives and standardisation bodies to ensure sustainable exploitation. Work Packages structure the project: WP1 requirements and pilot concepts, WP2 technical development, WP3 piloting and validation, WP4 assessment of ethics, inclusivity and learning, WP5 communication, dissemination and exploitation, WP6 project management. Over 36 months, SpAIces will progress from TRL 4 to TRL 6, delivering adaptive, accessible, trustworthy, and personalised VW learning spaces that advance the EU's ambition for secure and inclusive Virtual Worlds.

Evaluation Summary Report

Evaluation Result

Total score: 8.50 (Threshold: 10)

Criterion 1 - Excellence

Score: 2.50 (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:
 - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art.
 - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

The SpAIces proposal aims to develop, implement and validate an inclusive, secure, human-driven, and ethically grounded virtual world learning spaces demonstrator. This "demonstrator" will leverage GenAI and XR technologies to enhance education and training through immersive, realistic, interactive learning scenarios supported by smart digital assistants.

The scope of the proposal is ambitious and aligned with the call, addressing both topic areas.

The research objectives are generally clear, achievable and accompanied by relevant KPIs. However, the measurability and means of verification of the provided KPIs is not adequately addressed. For example, in SO3 it is stated that the "Demonstrator is tested in 3 different settings ≥ 3 user profiles with ≥ 50 users per setting". It is not convincingly clarified what constitutes a successful testing or user involvement.

The current state of the art is not credibly articulated and the ability of the proposal to go beyond the state of the art is not convincingly justified.

The methodological approach described is not sound. The information provided generally lacks benchmarking against existing XR/GenAI systems and a justification for why this approach outperforms existing systems is not provided. An adequate scientific background is not presented to support the methodology, with no clear explanation of underlying concepts and assumptions. In addition to this, the proposed use cases for verification of the project objectives are generic and only briefly presented. In particular, the "demonstrator" concept is not adequately explained. This is a weakness.

The proposal adequately addresses SSH/human centred aspects and has an interdisciplinary approach.

Privacy, ethical and gender-based issues are adequately addressed.

The project proposal does not clearly present synergies with existing projects and initiatives.

An open science methodology is envisioned through the publishing of scientific (open access) and technical outcomes (datasets) in the public domain. However, the specifics of this approach are not provided. For instance, it is not evident that the existing "SURF AI Hub" will be open source. It is unclear whether the rest of the components will be able to operate without this hub in the open source domain.

While the FAIR data management principles are acknowledged, the actual data management procedures are not properly defined. It is unclear what specific data types will be collected, how exactly sensitive and non-sensitive datasets will be distinguished, and what concrete procedures will ensure GDPR compliance and anonymization. Moreover, the choice and implementation of metadata standards and the workflow for depositing data into EOSC compatible repositories are not sufficiently clearly specified.

Criterion 2 - Impact

Score: 3.00 (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project.
- Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.

The pathways to the expected outcomes of the call are described in too broad and generic terms to demonstrate the achievability of the outcomes and impacts.

The proposal does not provide sufficient detail regarding the expected wider and long-term impacts, and there is a lack of specificity and measurability to convincingly demonstrate how such impacts will be achieved or assessed.

An adequate overview of five types of potential barriers to the project's success is provided, with feasible mitigation actions.

The scale and significance of the contributions from the project is described in predominantly qualitative terms without adequate evidence-based metrics to assess their credibility and magnitude. For example, while the proposal claims a "high policy and economic impact" through the "engagement with Horizon Europe projects, standardization bodies, and open-source communities", it does not define measurable indicators of this impact.

The proposed dissemination and communication measures are generally adequately structured and appropriate for achieving the objectives, with a coherent set of actions and clearly identified channels and indicators. However, the quantitative indicators for these are largely modest compared to the project's overall ambition and scope (for example, number of scientific publications). The exploitation activities lack clear operational detail and specificity regarding what will actually be delivered, when, and by whom. For example, while the proposal mentions the "integration of open-source demonstrators into higher education and vocational training" it does not clarify the concrete exploitation route, such as the number of institutions involved, the licensing model, or the mechanism ensuring post-project maintenance and uptake. The target groups for all measures are only superficially identified.

The strategy for the management of intellectual property is not clearly articulated. For example, while several key exploitable results are identified, such as open-source demonstrators, accessibility frameworks, and training toolkits, the proposal does not specify the management approach towards the underlying IP for each and how exactly joint IP arising from multi-partner collaboration will be governed.

The proposal addresses collaboration with the European R&D community through the AI-on-demand platform and other platforms.

Criterion 3 - Quality and efficiency of the implementation

Score: **3.00** (Threshold: 3 / 5.00 , Weight: -)

The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme:

- Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

The work plan is adequate, with clearly identified deliverables. However, some milestones are not clearly specified. In addition to this, task dependencies and integration points are ambiguous, and specific handoffs and decision gates between tasks, especially in the early stages, are not clearly defined. Considering this, progress monitoring measures are not adequate.

The distribution of the resources is not proportionate and not clearly justified. For example, effort dedicated to "design and requirements gathering" (WP1) is disproportionately high in relation to that dedicated to the technical development (WP2) itself. Furthermore, there is ambiguity in the allocation of resources for some partners, for example purchase costs, travel and subsistence, and subcontracting are not clearly justified.

The risk analysis and mitigation plan is not suitable, being limited to a few high level risks with mitigation measures that lack adequate detail. The risk analysis has notable gaps, especially concerning scientific and technological execution.

Overall, the consortium demonstrates adequate capability, expertise and complementarity, bringing together the necessary disciplinary and inter-disciplinary knowledge, including SSH. However, access to critical infrastructure is not credibly demonstrated since the proposal does not clearly identify what exact infrastructure consortium partners have access to.

The proposal includes cohesion activities, such as policy dialogues and interoperability discussions, with relevant partnerships (Virtual Worlds, ADRA) and other EU initiatives.

Scope of the application

Status: **Yes**

Comments (in case the proposal is out of scope)

Not provided

Exceptional funding

A third country participant/international organisation not listed in [the General Annex to the Main Work Programme](#) may exceptionally receive funding if their participation is essential for carrying out the project (for instance due to outstanding expertise, access to unique know-how, access to research infrastructure, access to particular geographical environments, possibility to involve key partners in emerging markets, access to data, etc.). (For more information, see the [HE programme guide](#))

Please list the concerned applicants and requested grant amount and explain the reasons why.

Based on the information provided, the following participants should receive exceptional funding:

Not provided

Based on the information provided, the following participants should NOT receive exceptional funding:

Not provided

Use of human embryonic stem cells (hESC)

Status: No

If YES, please state whether the use of hESC is, or is not, in your opinion, necessary to achieve the scientific objectives of the proposal and the reasons why. Alternatively, please state if it cannot be assessed whether the use of hESC is necessary or not, because of a lack of information.

Not provided

Use of human embryos

Status: No

If YES, please explain how the human embryos will be used in the project.

Not provided

Activities excluded from funding

Status: No

If YES, please explain.

Not provided

Exclusive focus on civil applications

Status: Yes

If NO, please explain.

Not provided

Overall comments

30. Strengthening Vaccination Systems to Reach Disadvantaged in LMICs

Research Council of Norway

2025

Prosjektvurdering – Karaktersammendrag og administrasjonens vurdering av relevans

Prosjektnummer: 358848

Prosjekttittel: Strengthening Vaccination Systems to Reach Disadvantaged in LMICs

	Vurderingskriterium	Karakter
1	Forskningskvalitet	5
2	Virkninger og effekter	5
3	Gjennomføring	5
4	Relevans for valgt tema 6 <i>The research in this project is focused on health improvements for vulnerable groups in low- and lower-middle-income countries (LLMICs) and is relevant to UN's Sustainable Development Goal number 3 "Good health for all" and one or more of the targets.</i> <i>The proposal could have been stronger in the descriptions of how the project will contribute to closing an identified research gap, and demonstrate that it has the potential to contribute, directly or indirectly, to substantial reductions in disease burden in LLMICs, reduce health inequity in LLMICs, and contribute to new insights that are also relevant to policy and practice beyond the specific setting and context in which the studies are conducted.</i> <i>The research proposal fulfils the requirements for equitable partnerships with partner institutions in LLMICs. This includes a fair distribution of funds and institutional costs to partners in LLMICs proportionate to their expected roles, involvement and responsibilities in the project, equitable sharing of credits, strengthening of individual competence and institutional capacity, and joint leadership on the scientific content of the project.</i> <i>End users are represented in all phases of the project. The inclusion of decision-makers and other relevant actors at policy level, such as ministries of health or the WHO, is explained in a satisfactory manner.</i>	6
	Hovedkarakter*	5

Karakterskala: 7, 6, 5, 4, 3, 2, 1 (7 er best)

*) Hovedkarakter er et uttrykk for hvor godt prosjektet oppfyller intensjoner og formål for søknadstypen med utgangspunkt i bedømmelsen av de ulike kriteriene. Hovedkarakter 3 eller lavere forteller at prosjektet har en avgjørende svakhet i form av karakter 3, 2, 1 på minst ett av kriteriene.

Prosjektvurdering – Karaktersammendrag og administrasjonens vurdering av relevans

Prosjektnummer: 358848

Prosjekttittel: Strengthening Vaccination Systems to Reach Disadvantaged in LMICs

"Relevans for utlysningen" betegnes "ikke vurdert" dersom søknaden ligger under administrativ terskel for en fullstendig behandling av søknadene.

Karakterene er en del av underlaget ved det besluttende organs behandling av søknaden.

Assessment of grant application submitted to the Research Council of Norway

Grant application

Project number	358848
Project title	Strengthening Vaccination Systems to Reach Disadvantaged in LMICs
Project manager	Baharmand, Hossein
Project owner	HANDELSHØYSKOLEN VED UIA

Confirmation

By completing and submitting this form, I / we confirm the following (applies for the individual referee or the referee panel):

- I/We have no conflicts of interest that would prevent me/us from conducting this assessment. See information about assessing grant applications.	Yes
- I/We have read and understood both the criteria I/we have been asked to use for assessing the application and the description of the scale of marks. The scale of marks is to be applied as an absolute scale, i.e. marks are to be determined for each grant application independently and not relative to other applications that the panel/referee is assessing.	Yes
- I/We understand and accept the guidelines for assessing applications for Research Council of Norway, including the requirements for confidentiality. I/We understand that I/we are not permitted to use content from the application or assessment text into online services, such as ChatGPT. See information about assessing grant applications.	Yes
I am/We are qualified to conduct this assessment.	Yes

Summary of marks

Criterion	Mark
Excellence	5
Impact	5
Implementation	5

Criteria

Excellence

The extent to which the proposed work is ambitious, novel, and goes beyond the state-of-the-art

- Scientific creativity and originality.
- Novelty and boldness of hypotheses or research questions.
- Potential for development of new knowledge beyond the current state of the art, including significant theoretical, methodological, experimental or empirical advancement.

The quality of the proposed R&D activities

- Quality of the research questions, hypotheses and project objectives, and the extent to which they are clearly and adequately specified.

- Credibility and appropriateness of the theoretical approach, research design and use of scientific methods.

Appropriate consideration of interdisciplinary approaches.

- The extent to which appropriate consideration has been given to societal responsibility, ethical issues and gender dimensions in research content.

- The extent to which appropriate consideration has been given to the use of stakeholder/user knowledge.

This is a innovative proposal to support policy makers in LMIC in optimising vaccination coverage via system modelling. Based on literature, stakeholder involvement and data from Senegal, and adapting the WHO building blocks framework, they aim to comprehensively analyse both determinants on the supply side (health systems performance, cold chain, availability of vaccines) and on the demand side (access to services, acceptance of vaccination). This input can be used in advanced mathematical models to build casual loops that reflect the interconnectedness of these aspects in achieving coverage, which is a strength beyond focusing on a single aspect only. The modelling to be developed should allow to include many interconnected determinants of uptake, which is a strength, but the validity of the parameters remains dependent on actual time-place-person specific data. A limitation is that no data on current vaccination uptake, or other determinants, are provided as background. Using the WHO framework implies a strong focus on the health system, but this might be not optimal to capture external influences (eg social media, traditional beliefs). Also, it is a bit surprising that the only specific vaccination mentioned is Covid-19, rather than routine infant vaccinations (or even HPV), making the grounding of the project less clear.

This project aims to generate evidence-based knowledge for policymakers on what is needed to increase vaccination coverage among "disadvantaged populations" in LMICs and how this can be implemented. Senegal is suggested as a case study with comprehensive systems analysis and simulation modeling.

The sections providing background, rationale, and description of the Senegal immunization context are brief and miss several essential aspects. The up-to-now important role of GAVI and other global funding mechanisms could have been clearer. Several reviews on the proposal's topic are available and not reflected in the application. Also, the description of the Senegal case study situation lacks essential details, and the relatively rich literature on immunization in Senegal is not well reflected. The main features of Senegal's National Immunization Program are not provided, and the fact that Senegal has a higher vaccine confidence than other African countries and has reached excellent vaccination coverage (around 90% for most antigens in the program) may be an issue in serving as a case study regarding reaching disadvantaged groups.

The theoretical approach is not backed up by an overview of previous efforts, and the work packages dealing with data, analyses, synthesis, and policy formation lack details. The applicants describe an ambition of gender-sensitive approaches and consideration of ethical issues. The proposal does not mention whether the team intends to submit the proposal for ethical review in Senegal and Norway.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Impact

Potential impact of the proposed research

- The extent to which the planned outputs of the project address important present and/or future scientific challenges.
- The extent to which the planned outputs are openly accessible to ensure reusability of the research outputs and enhance reproducibility.
- The extent to which the planned outputs of the project address important present and/or future challenges for the sector(s).
- The extent to which the competence developed and planned outputs of the project will provide the basis for value creation in Norwegian business and/or development of the public sector.
- The extent to which the planned outputs of the project address UN Sustainable Development Goals or other important present and/or future societal challenges.
- The extent to which the potential impacts are clearly formulated and plausible.

Communication and exploitation

- The extent to which the appropriate open science practices are implemented as an integral part of the proposed project to ensure open sharing and wide distribution of research outputs.
- Quality and scope of communication and engagement activities targeted towards relevant stakeholders/users.
- The extent to which the partners are involved in dissemination and utilisation of the project results.

The potential impact of the proposal can be significant, provided models can accurately capture dynamics around uptake of common childhood vaccines (Covid 19 vaccination uptake is likely less perceived as a need in Senegal). It would enable policy makers to understand the expected impact on overall vaccination uptake when a specific aspect only is modified. This would be independent whether this is an intentional intervention, or an unplanned unexpected event. Involving the policy makers in the project, including in the building of the model should increase changes for acceptance and usage of the outcome of the model. A major challenge/risk might be that the final model should be sufficiently user-friendly and flexible for the context, and that policy makers feel sufficiently confident to base decisions on modelled scenario's.

The global immunization context, which is so important in a country setting and across the world, is not well represented. The outputs planned to be openly accessible. The strong links to various SDGs are displayed. The potential academic and societal impact could have clearer presented, and there may be doubts whether the Senegal case study will offer insights and new knowledge that is applicable to LMICs that struggle with much lower vaccination coverages. Communication plans include a range of channels and target groups.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Implementation

The quality of the project manager and project group

- The extent to which the project manager has relevant expertise and experience and demonstrated ability to perform high-quality research (as appropriate to the career stage).
- The degree of complementarity of the participants and the extent to which the project group has the necessary expertise needed to undertake the research effectively.

The quality of the project organisation and management

- Effectiveness of the project organisation, including the extent to which resources assigned to work packages are aligned with project objectives and deliverables.
- Appropriateness of the allocation of tasks, ensuring that all participants have a valid role and adequate resources in the project to fulfil that role.
- Appropriateness of the proposed management structures and governance.
- Appropriateness of the partners' contribution to the governance and execution of the project.

The project team is strong in the required expertise. There is much awareness of the challenge of working with an international multidisciplinary group with very different backgrounds and positions. This is also reflected in the risk management plan with specific mention of the need to mitigate partner conflicts. It will be relevant to include sufficient Senegalese experts, inside and outside the health sector, in all phases. This should involve the people involved in actual management of the complex needs to ensure vaccination reaches those in need.

The project manager is an experienced researcher with a disaster-related profile, but also some studies in the immunization field. He intends to work full-time with the project which is commendable. Partners' competences show good complementarity across involved institutions. Activities are divided into work packages, where roles and tasks seem appropriately shared between partners. The budget however is imbalanced, with only 24% to Dakar partners in spite of the focus of a Senegal case study as the basis for the project.

Selected mark : 5 - Very good

The proposal addresses the criterion very well. A small number of shortcomings are present.

Special points to consider

Comments to special points to consider

UiA PRIFORSK Evaluation Form

(for external referees)

Assessment guidelines:

The research centre to be reviewed has been a Priority Research Centre (PRIFORSK) at the University of Agder since 2022. From 2022 until the end of 2026, the research centre has been receiving strategic funding from the university in order to further develop and strengthen quality of the centre's research and the centre's national and international impact. The purpose of the current evaluation is to critically assess the centre's achievements in this period, its current level, and the centre's future potential. The assessment will be used as guidance for the university management's decision on whether to extend its funding support to the centre for an additional period of up to three years.

The assessment is to be done based on the research centre's evaluation report (including attachments) provided to you. Please note that chapter 2 of the evaluation report is a self-evaluation by the centre and is not formally a part of your assessment assignment. However, you may refer to chapter 2 to gain insight into the research centre and to inform the assessments you are asked to do.

All assessments should be written. Marks are not to be used. The minimum amount of words that should be used are specified in the comments section below for each evaluation criteria. Additional information and guidelines for each evaluation criteria are also provided below.

1. Overall assessment

Based on your reading of the evaluation report, the overall assessment should comment on, but is not limited to:

- Overall impression of the centre's contribution to strengthen and increase research quality and research capacity in the period of evaluation
- Overall impression of the centre's research quality and competitiveness at an international level as of mid 2026
- Overall impression of the centre's organization and management

Comments: *Please address all the above bullet points as a minimum (min 500 words)*

CIEM has established itself as a significant interdisciplinary research centre in societal security, emergency management and digital resilience. It has evolved into a mature interdisciplinary centre with a strong European orientation, excellent collaborative networks and growing success in competitive funding. It presents a large, multidisciplinary research environment (26 full time professors and 4 part time) spanning a wide variety of faculties, coordinated by the Faculty of Social Sciences. This enables CIEM to address complex challenges in societal resilience and innovation through research and knowledge dissemination. Whilst its research is strongly application-focused, it is underpinned by a robust scientific foundation many years of development. The centre is well positioned to strengthen its international leadership. It has continued to improve its research quality, expand its capacity, enhance its international competitiveness, and adapt to emerging research needs. A significant strength is that its research is addressing an area of increasing strategic importance for Europe, namely societal security and civil preparedness. The quality of the research is well

demonstrated by the high level of publications in top journals although it is a little difficult to assess how much of an increase over the 4 years there has been as the figures are not presented to enable such a trend assessment. What is clear, however, is that between 2022 and 2026 the centre has been highly effective at capacity building. It has significantly increased opportunities for PhD candidates from 4 to 21 and achieved new MSc courses in Cyber security and Global development. Five CIEM researchers were promoted to be professors, including one female professor. The success of gender balance initiatives is of particular note with the increase in the proportion of female researchers at the centre which has risen from 28% in 2022 to 36% in 2026. Furthermore, it has strengthened international partnerships with universities, emergency services and public authorities and increased activities in applying for competitive funding. It has created the environment that enables credible participation in large European consortia. Collectively these activities substantially increase both institutional capability and long-term research sustainability.

CIEM publishes extensively in top international peer reviewed journals and beat its own targets over the last 4 years, averaging around 100 per year. It has achieved a strong interdisciplinary research environment with increasing international visibility in digital resilience, emergency management, and information systems. Its competitiveness is demonstrated through successful participation in externally funded research projects, international collaborations, and its contribution to emerging European priorities in societal security and digital transformation. While the centre has established a strong foundation, further strengthening of international research leadership will depend on continued growth in high-impact publications, strategic research integration, and leadership of major international initiatives. It is therefore very encouraging to see the increased focus in engagement in the international research community being addressed through numerous conference roles including chairing conference tracks and chairing conferences. These are also highly indicative of high-quality research being recognised through peer endorsement. Getting more involved in organising international conferences would further support this action.

CIEM operates as a multidisciplinary entity coordinated by the Faculty of Social Sciences. The centre director's role is to ensure strategic leadership and interdepartmental collaboration. There is a Steering Group supported by a manager and administrative manager. Two advisory boards, the Scientific Advisory Board and the Practitioner Advisory Board, provide strategic input. The research activities are organized into research clusters, where each cluster is led by a PI and a co-PI. This structure overall has proven to be effective and adaptable. Ensuring that milestone targets are being met and also ensuring future needs are identified and adaptations are implemented effectively. The structure seems logical and proven to be effective. Going forward however, it would be expected that more international representation could be beneficial.

2. External funding

Please refer to chapter 5. **External funding** and assessments of submitted proposals (attached)

The assessment should comment on, but is not limited to:

- The centre's *efforts* to obtain external funding
- The centre's *ability* to obtain external funding
- Overall impression of the quality of research proposals submitted by the centre (please refer to the attached assessments of submitted proposals)

Comments: *Please address all the above bullet points as a minimum (min 250 words)*

It is clear that there has been a significant and consistent effort year in year to increase the number of applications for external funding. Although no data was given for 2026, the numbers of applications have risen steadily from 2 pa in 2022 to 15 in 2025. The number and variety of programmes is focused mainly on Research Council Norway and local regional programmes with a few European applications included. It is notable, however, despite the overall increase in applications, applications into the Horizon Europe programme have remained rather static at about three per year since 2023. I feel more attention on these would be an important aspect to work on to improve the international research standing of the centre. There also is a trend to be invited as a partner in more proposals and whereas in 2022 100% of applications were coordinated by CIEM in 2025 that was 29%. This is a testament to very effective networking but needs to be carefully balanced against the need to be seen to be taking the lead in the field.

The overall success rate for the centre in winning proposals from competitive applications is a very credible 8 out of 30. This is well above the typical funding success of most calls being applied to which are generally around the 12 – 15% level. However, it is notable that for the proposals that are coordinated by CIEM members the success rate is rather poorer than in the applications where they are partners. 15% against 35%. In terms of volumes, 13 applications were made as coordinator and 2 were awarded. For ones where they were Partner, 17 were applied for and 6 were awarded. This could suggest that more capacity building for project coordinators is required. What is not presented in the report, however, is the amount of funding that each of these projects has contributed.

There is quite a variety in the quality of the proposal submitted. The majority of the proposals were evaluated very positively with scores for the research council applications rarely falling below 5. There is one EU application where the Excellence was heavily criticised scoring below threshold. This, however, was not one coordinated by CIEM and thus not really representative of the quality of the centre's contributions. The main weaknesses identified for the coordinated proposals were mainly related to insufficient details, vague objectives, weak theoretical grounding, limited innovation, unclear impact pathways, stakeholder engagement gaps, budget/resource issues and weak dissemination plans. These are very typical of proposals presented by less experienced applicants and as it is pointed out in the report, there are a variety of skill levels and experience across the applicants. However, I feel this is an aspect that should be improved to ensure the overall quality of the proposal is brought up to match the quality of the underlying science. At an institutional level success rates of over 20% should be the target for efficiency purposes.

3. Future potential

Based on your reading of the evaluation report, the overall assessment should comment on, but is not limited to:

- Overall impression of the centre's future potential, with particular emphasis on potential for successfully competing for SFI and/or SFF funding within the next three years (2027-2029)
- Significant shortcomings, if any, in the centre's track record and/or capacity that would need to be addressed to successfully compete for SFI and/or SFF funding.

Comments: *Please address all the above bullet points as a minimum (min 500 words)*

The Centre is well aligned with a developing field both in terms of technological progress and societal need due to the rapidly changing environment and geopolitical developments. As such CIEM already demonstrates many of the characteristics expected of an SFI:

- strong interdisciplinary collaboration;
- substantial experience managing large collaborative projects;
- close engagement with emergency services, government agencies and industry;
- expertise in digitalisation, AI, cybersecurity and resilience;
- success in securing competitive external funding.

The Centre's work is inherently translational, and many of its research themes naturally lend themselves to long-term innovation partnerships. Focusing on developing an application around digital resilience, AI-supported crisis management, critical infrastructure resilience or societal preparedness, it would clearly be a highly credible SFI contender.

I believe that at present achieving an SFF would be much harder. Since the Research Council expects, internationally leading science, clear scientific leadership, groundbreaking research questions and a demonstrated record of producing fundamental advances that influence an international field. This is where I think CIEM is still developing. Whilst CIEM excels at, interdisciplinary applied research, societal impact, building research capacity, it is still developing its international research capacity (few EU projects), defining international research agendas (it is reacting to them), producing consistently field-leading theoretical advances, recognised globally as the place where fundamental breakthroughs originate. I feel to win an SFF it would likely need to develop a much sharper fundamental scientific identity over the next few years.

CIEM is already highly credible and competitive as an SFI applicant and the recent SERENE application demonstrated excellent scores – however the ability to present a coherent impact section is something that seemed to result in significant weaknesses. This is a proposal presentation issue rather than a fundamental shortcoming of the Centre. However as mentioned previously some specialised training in proposal writing and regular refreshers would help build more capacity for successful proposal writing.

To become more competitive in applying for SFF, there needs to be more evidence that CIEM is becoming the world leader in one or two tightly defined areas rather than covering many related topics. Perhaps areas such as; AI for societal resilience, Human-centred crisis informatics, Digital twins for emergency management or Decision intelligence for complex disasters – these could sit within some of the updated clusters proposed. To support the international leadership aspects, more attention to organising international conferences – or being on the organisational committees to supplement the great work on chairing sessions would be valuable. It may also be helpful for more of the senior scientists to look to apply for the prestigious individual grants such as ERC Advanced or Synergy grants may also address a perceived weakness in the more fundamental basic scientific research the SFF reviewers would take note of.

So, in summary I think CIEM has already reached the level where an SFI application would be very credible. For an SFF, I suggest the Centre requires a few more years consolidating its publication profile, demonstrating leadership of major international initiatives, and articulating a bold, unifying scientific programme that is clearly differentiated from other leading centres worldwide.

UiA PRIFORSK Evaluation Form

(for external referees)

Assessment guidelines:

The research centre to be reviewed has been a Priority Research Centre (PRIFORSK) at the University of Agder since 2022. From 2022 until the end of 2026, the research centre has been receiving strategic funding from the university in order to further develop and strengthen quality of the centre's research and the centre's national and international impact. The purpose of the current evaluation is to critically assess the centre's achievements in this period, its current level, and the centre's future potential. The assessment will be used as guidance for the university management's decision on whether to extend its funding support to the centre for an additional period of up to three years.

The assessment is to be done based on the research centre's evaluation report (including attachments) provided to you. Please note that chapter 2 of the evaluation report is a self-evaluation by the centre and is not formally a part of your assessment assignment. However, you may refer to chapter 2 to gain insight into the research centre and to inform the assessments you are asked to do.

All assessments should be written. Marks are not to be used. The minimum number of words that should be used are specified in the comments section below for each evaluation criteria. Additional information and guidelines for each evaluation criteria are also provided below.

1. Organization

Please refer to chapter 3. **Organization** of the evaluation report and give an assessment of the centre's organization.

The assessment should comment on, but is not limited to:

- Appropriateness of the centre's formal organization and organization of research activities
- Robustness of the centre, considering the number of participating researchers, their degree of participation and level of competence
- How internal strategic funds and recruitment positions have been used, and its relevance and contribution to the centre's research activities
- The centre's engagement in supervision of master students and PhD candidates
- The relevance of the centre's external partners to its research activities and research strategy

Comments: *Please address all the above bullet points as a minimum (min 500 words)*

The CIEM centre formation has since its incipience in 2011 functioned as an interdisciplinary platform for research on technology support for emergency preparedness and management. An interesting aspect of its history is that its management once shifted from the Faculty of Engineering and Science to the Faculty of Social Sciences, which seems to testify for the engagement from both ends of the academic spectrum at the University of Agder. As for the social sciences, it is Information Systems and Global Dev. Planning that are the active departments, and for the other faculty, it is Engineering and

ICT, respectively. For the centre's aim to work interdisciplinary there are two things to assess, namely, the organisation of research activities and the interplay with external partners.

The application to become a PRIFORSK centre prompted CIEM to name specific research areas, as mentioned in the self-evaluation report's chapter 3.2 where it is also mentioned that one area was divided into two rather distinct areas, robotic aids and information aids, respectively. Furthermore, for the period 2024-2026 some additional adjustments in the area definitions have been made to respond "to changes in CIEM membership, the completion of projects that previously shaped the cluster structure, and the emergence of new strategic research themes" (p. 8). This is a fully justified flexibility to stay in tune with what external funding happens to be granted and competence changes within the university. It is really a proof of a healthy resilience as concerns the thematic focus areas and the centre's self-image. Times are changing, as always, and to the technological development comes also new threats such as cyber threats but also international conflicts beside the escalating effects of climate warming. The growing interests of governments in "total" preparedness is an argument that is expanded more on in the evaluation's chapter 6.

The number of disciplines engaged in the centre seems rather stable, and possibly a bit limited compared to the flexibility that the centre shows. This could be a result of a need to focus on external funding which necessarily needs to reward the persons involved in obtaining the money, or that other disciplines do not see themselves as contributing to "emergency management". The evaluation report is not explicit on how invitations to seminars, funding-proposal writing, etc., is made within the university. At the same time, the expenses covered by the PRIFORSK allocation to the centre is discussed, and the recruitment of research students, researchers as well as "student assistants and temporary engagement of personnel to support our strategic goals, and KPIs" (p. 9) has promoted an even stronger CIEM. It is also notable that while the university board allocated for two PhD students, the faculties have contributed in-kind funding of a further three (actually four, as the dept. of Global Dev. had a second PhD student to join the CIEM themes which makes the CIEM PhD students total six). Table 7 details to what extent involved researchers are working with CIEM related matters, the % numbers spans from 10% to 80%, with a clear indication that persons central to the CIEM work spend 40, 60, or 80% of their time to this work. For professor IIs, the 20% is not indicative of their engagement in crisis preparedness and management research as they have employments at other institutions where they work within the same field. One can possibly wonder why not more post-docs in other disciplines than Information Systems have been engaged. It might reflect the size of the departments, but it might also reflect the engagement of leading persons in each department and thereby reveal a possible threat to sustained interdisciplinarity. For an interdisciplinary organization to work, there must be time allocated to spend on joint activities as well as on disciplinary/departmental activities. Otherwise the organisation risks to become a department of its own.

Gender balance: women appears as the minority, but the centre is from August 2024 led by a woman and the report shows the proportion of women researchers to slightly increase from 28% to 36% during the PRIFORSK period. This might be a reflection of the constituent disciplines involved. If so, this can be a reason to try to map what other perspectives on technology support for crisis preparedness and management can be brought into CIEM if disciplines predominated by women (foreign languages and translation, health, etc.) could be engaged in its activities.

As concerns external partners and the organisation of the centre, it is notable that the centre has two advisory boards: one scientific, one practitioner. This might be a simple recognition that many questions discussed by researchers are not about research-questions per se but belong to academic navigation, especially how to relate to the university as the owner and how to promote researchers within the academic hierarchy. Table 9 lists external partners and for some also their engagement (but

not advisory board engagement); this is an impressive number and coverage and highly relevant to the research activities and research strategy. Also other parts of the organisations (3.1 and Figure 1) speak for a well-designed structure. CIEMlab appears to have already played some role in the success of the centre, and can be developed further (2.6) and thereby increase the attention by external partners for their training and evaluations work.

When assessing a university centre it is reasonable to ask in what forms the centre or at least its researchers contributes to the teaching of students. The self-evaluation mentions master programmes in particular. There are now two in cybersecurity: Cybersecurity Management and Cybersecurity Technology, that is, one at each faculty. Cybersecurity is a growing concern in society and there is no lack of students. The report makes the remark that “there is a steadily increasing interest in CIEM-related cybersecurity topics” (p. 11). It is natural that not all students see “cybersecurity” as CIEM-related; on the other hand, the report mentions that also other master students write within CIEM fields. There is also a new master programme in Global Development, Crisis and Change, again with a good number of students. In all three cases, the engagement of centre researchers is well-developed.

2. Scientific excellence and impact

Please refer to chapter 4. **Scientific excellence and impact** and give an assessment of the quality and impact of the centre’s research from an international perspective.

The assessment should comment on, but is not limited to:

- A critical assessment of what the centre itself considers are its jointly achieved and most significant contributions to advancing the research frontier, paying particular attention to a) the significance of the research contributions, and b) whether the contributions could or could not have been achieved by the individual researchers in ordinary research settings
- The quality of the centre’s research and the centre’s research output (please refer to the list of **up to ten most important publications** with comments as well as statistics on total number of publications)
- The quality and appropriateness of the centre’s communication, dissemination, and exploitation activities

Comments: Please address all the above bullet points as a minimum (min 500 words)

The centre mentions quite a few points as the most significant scientific contributions. Writing 179 journal articles is indeed quite a feat for a five-year period that has not even yet ended. Possibly, some articles include results from previous period, but nevertheless this is a very positive sign and to it should be added that 55 are in level 2 journals. Moreover, besides the journal articles there are also 210 book chapters and conference proceedings produced.

These results, as well as 9 doctoral dissertations (and 12 on-going PhD projects), have also had an impact on researchers’ advancement in the academic ranks: 5 CIEM researchers have been promoted to professors. This is very satisfying as it ensures the longevity of the CIEM group and its possibilities to receive further external funding. In chapter 3.1 of the self-evaluation report it is mentioned that the centre led or partook in 30 funding applications during 2022-2025 of which 10 were successful; see below under “External funding” for more on this.

The self-evaluation report also lists CIEMlab's Joint Operations Room and the advancements in master exams, which were treated above. In total, all these efforts seem utterly unlikely to have occurred without the PRIFORSK allocation and the in-kind contributions by the faculties. The self-report presents compelling publication numbers where the period before the PRIFORSK are compared with publication numbers during the PRIFORSK (chapter 2.2) albeit the number of researchers involved is not mentioned. On the other hand, an increase in the number of researchers (i.e., possible authors) could partly be credited to the PRIFORSK funding.

Quality of research. The report emphasises that publications are found both in discipline outlets and in "the broader domain of emergency management research." That these two can be combined is also clear if one scrutinises the list of nine selected publications presented in Table 10 of the self-evaluation (note, there are nine, not ten, publications listed). For instance, the very first piece in the list, written by the Information Systems professors Radianti and Pilemalm and published in *Scandinavian Journal of Information Systems*, discusses a participatory design (PD) approach driven by stakeholder theory and is thus firmly placed in the expected disciplinary discourse. Nevertheless, the case illuminating the proposed PD approach is firmly within the domain of emergency management research: it aims to extract requirements for inter-agency collaboration within four themes typical for emergency management, namely learning from incidents, information sharing, terminology standardization, and even map symbol harmonization. All themes are easily recognised as relevant in emergency management.

To continue the list in Table 10, a Management and Innovation assoc. prof. publishes a literature review on evaluating protection, inclusiveness and dignity in humanitarian aid in the *Journal of Humanitarian Logistics and Supply Chain Management* and in the same year has a focus-groups study published on barriers to circularity in humanitarian supply chains in the *International Journal of Disaster Risk Reduction*. An IS professor co-authors an article on map functions to facilitate situational awareness during emergency events, published in *Cartography and Geographic Information Science*. A professor in Engineering Sciences co-authors with two CIEM doctoral students an article in the Level 2 journal *IEEE Sensors Journal* where a particular technique for deep machine learning demonstrated reduction of model size to just one tenth which the authors point out makes it suitable for edge deployment. The model was validated in real-time human-robot interaction scenarios related to disaster management and healthcare environments. A professor in ICT co-authors with two doctoral students an article demonstrating a new method to distribute drone-carried base stations to minimize the number of drones needed in areas with damaged or limited connectivity. This should have a great many uses in rural areas in the developing world besides the obvious use in crisis management. The self-evaluation, chapter 2.6, notes some problems: "However, due to Professor Romero reducing his position at UiA, the planned further testing and demonstration involving external participants has been postponed. As part of the TEKRI research infrastructure proposal, CIEM plans to collaborate with USN on establishing a drone lab."

An assoc. prof. in Information Systems co-authors an analysis of crowdsourcing platforms that offers fake reviews, likes, and comments (*Journal of Information Technology*, Level 2). Such instruments can during crises become a real problem if used by malevolent forces. Finally, the last two items brought up in Table 10 are a book and a book chapter co-authored by one past professor II in Global Development and Planning. These are on inclusiveness and power imbalances, and disability-inclusive Disaster Risk Reduction. Similar topics are still researched within the CIEM group and demonstrates the broad approach that this centre formation is able to take.

While the technological research may at times seem only loosely attached to disaster management and risk reduction, it is a collaboration well worth of nurturing. Future action research, where technical

insights and skills will be necessary in order to practically explore or validate technology assistance in different scenarios, will benefit greatly from this local resource at UiA and regional collaboration with USN and others.

Communication and dissemination (4.2). The centre has used a varied set of channels for communication with the surrounding society. In chapter 2.5, Table 5 compares activities with the KPIs targets original planned for 2022-2026. Five national and regional workshop and practice activities were planned and this number has been reached. Publications in practitioners' fora and news media has far exceeded plans (30 instead of 10), and this might be a good indication that relevant practitioner organisations have been made aware of the centre's activities. Videos on research output distributed in social media channels is also indicated as surpassing the 10 videos planned. Their LinkedIn account is followed by a large number of people and it would have been interesting to see an analysis of what spectrum of the society this includes – "presence on LinkedIn (1182+ followers), and Facebook (350+ followers)". A marginal remark concerning the university's web site is that "Completed projects" sometimes presents projects' goals rather than achievements (e.g. CONTRA and INSITU), and even when past tense is used links to project sites does not work (see virtual Reality in Higher Education).

Exploitation activities (end of 4.2; see also 4.1 on EVU courses). Reading the anonymous reviews of some of the project funding proposals, it is clear that at times it is hard to make a really convincing argument for a broader uptake of projected results outside of the project group. Nevertheless, Table 9 (pp. 11-12) in the self-evaluation, gives clear indications of the interests among key players and many other organisations for the work of the centre. As for direct exploitation, during the PRIFORSK period, several results from the previously granted INSITU project have been exploited: UiA has acquired the IPR for the SQUARE collaboration tool for potential commercialization; Standards Norway uses the project's map symbol archive as a basis for further standardisation work; a company uses TERMER as a commercial service; and the project and later activities constitute the basis for an EVU course on inter-agency collaboration and crisis management tools.

In all, the centre has used the PRIFORSK allocation to extend its scientific excellence and impact.

3. External funding

Please refer to chapter 5. External funding and assessments of submitted proposals (attached)

The assessment should comment on, but is not limited to:

- The centre's *efforts* to obtain external funding
- The centre's *ability* to obtain external funding
- Overall impression of the quality of research proposals submitted by the centre (please refer to the attached assessments of submitted proposals)

Comments: Please address all the above bullet points as a minimum (min 250 words)

The centre has a well-functioning strategy for obtaining external funding, and has been successful in so far as one third of the applications from the first four PRIFORSK years has been successful. If this also means one third of the total amount of money applied for, cannot be told from the self-evaluation report. Nevertheless, the list of applications in Table 12 and the appendix with the reviews of (most of) the 30 applications clearly tell of a centre able to formulate a host of research plans of different focus but all within crisis management and preparedness, which in turn will keep up the broad competence within the centre and the university. The strategy also includes sometimes taking a leading role ("coordinator"), sometimes a partner role. The latter at least entertain connections with other groups and spurs the exchange of ideas, even if an application eventually is not granted funding. Also in the type of application, we see a broad approach, and perhaps most importantly, there is no attempt to only have the academically most prestigious grants, ERC and RCN, but province governor's and regional research funds are also approached. This benefits an applied-science oriented research centre in two ways: less competition makes application work more worthwhile¹, and these kind of funds generally demands clear stakeholder involvement. In some of the rejection motivations to EU applications the generalisability of a research agenda is questioned. There is a balance here to keep in mind. The centre and the university as an educational institution must constantly reconnect to realities of small and large organisations, of societal representatives at various tiers, etc. This is not to deny that the reviewers may be right in criticising certain assertions in a research plan. The question is rather what conclusion to draw from such reviews.

The appendix constitutes interesting reading, and one can hope that all researchers take time to leaf through the document regardless of their percentage of involvement in the centre. The authors behind the self-evaluation acknowledge shortcomings in some applications: "Concerning the weaknesses addressed in various proposals revolve around insufficient detail, vague objectives, weak theoretical grounding, limited innovation, unclear impact pathways, stakeholder engagement gaps, budget/resource issues, weak dissemination plans, lack of social/ethical integration, and underdeveloped governance." This self-reflection constitutes a good sign. The overall impression is that the scientific management is responsive to criticism and that research proposals generally have a very good standard even when they have not been awarded a contract for funding.

¹ After the self-evaluation was written, there are two projects granted where the applications do not appear to be included in the list of applications. The university's web site reports 23rd of June, 2026, that the university receives 15 million crowns from Agenda Southern Norway, a fund connected to the Saving Bank of Norway (Sparebanken Norge), for projects strengthening Norway's capacity in AI use in climate crises and digital extremism.

4. Strategy and plans for further development

Please refer to chapter 6. Strategy and plans for further development

The assessment should comment on, but is not limited to:

- Quality, soundness, and feasibility of the centre's strategy and plans for further development beyond 2026

Comments: Please address all the above bullet points as a minimum (min 250 words)

The centre is keen to emphasise that its direction of research will be aligned with a number of national documents about civil preparedness, and also UiA's and the university's faculties' strategic documents. The centre also mentions its own researchers as the primary source for competence when developing themes found in the national strategy documents. Relying on Jore, Borch, Sydnese, and Kvernevik's note on future research needs within societal safety and security ("Notat: Fremtidige Forskningsbehov innen Samfunnssikkerhet", RCN, 2025), the self-evaluation mentions five important strategic needs: 1) basic research and not only solving today's problems, 2) interdisciplinarity to deal with "polycrises", 3) enhance cross-sector capacity, 4) strengthen social-value research, and 5) security of supply chains in societal critical functions. From what CIEM has produced so far, and from some research directions outlined in funding applications that not yet have been successful, it is safe to conclude that CIEM will be able to aligning to these strategies. The self-evaluation report goes on to say that "Several thematic areas have emerged as central." Whereupon follows a dense but insightful paragraph which should not be repeated here except acknowledging that civil—military cooperations is mentioned.

CIEM has divided its strategy into short- and long-term planning. For 2026 and 2027 on-going projects constitute a main occupation and there are also a few funding proposals awaiting decision. Moreover, new funding proposals have been in making when the self-evaluations was written. No less than seven proposals are listed (deadlines April and June 2026). CIEM plans to act as coordinator in one of them, "Managing emerging AI cyber threats in energy sector infrastructures", and for the rest the centre is a partner. No doubt, the PRIFORSK allocation of special funds for the centre has made these engagements possible while the centre researchers also have a high level of publication completed each year as noted earlier in this assessment.

For the long-term planning, the centre envisions a reliance of the clusters discussed earlier but in addition taking into account the "total preparedness" discussion and three emerging themes – Cyber Resilience, Climate Crisis and resilience and AI and Technology Support – with an overall focus on "Technology-based innovation for increased societal security and resilience". Continued regional and national collaboration will be extended by more international engagement to enhance the global impact. Among other things, the self-evaluation report mentions plans to visit the EU's Emergency Response Coordination Centre (ERCC), and the European Crisis Management Laboratory (ECML). For cyber security more collaboration with Nordic countries is mentioned – this is timely since for instance Sweden has its Cyber Campus now where several universities are collaborating. The Joint Operations Room in Kristiansand is liked by CIEM's partners and could become a national resource, and perhaps also a piece to consider when laying the inter-Nordic puzzle.

Lastly, the centre lists seven points as "CIEM 2027-2029 high-level KPIs given further strategic funding". Some have already been touched upon, but for the sake of the assessment of what a renewed allocation by the university would generate, it is noteworthy that the plans include exploiting the upswing in funding within CIEM's research themes including joining or coordinating a proposal for the

Research Council's funding on Defence capability, Security and Preparedness. Another clear indication on monetary use is a point that mentions enrolling two PhD students for research topics related to Cyber security and AI and climate adaption.

In conclusion, the centre's strategy and plans for further development beyond 2026 appear as well-wrought taking into consideration the many factors and actors that presently shape and reshape the area of crisis preparedness and management.

5. Overall assessment and future potential

Based on your reading of the evaluation report and assessment of the abovementioned criteria, the overall assessment should comment on, but is not limited to:

- Overall impression of the centre's ability to strengthen and increase research quality and research capacity in the period of evaluation (2022-2025)
- Overall impression of the centre's research quality and competitiveness at an international level as of mid 2026
- Overall impression of the centre's future potential

Comments: *Please address all the above bullet points as a minimum (min 250 words)*

During the first four years of the PRIFORSK period, the centre CIEM has geared up and demonstrates a very good cruising speed without narrowing the focus on one specific theme in emergency management and preparedness. There are many interconnected branches that the CIEM researchers as a collective are able to follow, and using a handful or in the future perhaps only three main thematic areas is not a hindrance but just an adequate way of presenting the manifolded research. In the assessment it is noted that the gender imbalance might be a reflection of the constituent disciplines involved and one can take this as a reason to map what other perspectives on technology support for crisis preparedness and management can be brought into CIEM if disciplines predominated by women, for instance Health sciences, could be engaged in its activities. The centre's self-evaluation does not mention if joint projects with stakeholders also have this imbalance. For future "total preparedness" this questions will remain relevant.

For the centre's efforts to secure external funding, it is laudable that a manifolded approach is used and local sources are not overlooked. Regional relevance is important for a centre for which explorative research is one of the obvious methodological choices.

At an international level, it is noteworthy that the centre during the period not only published many papers but also secured more external funding including the participation in international projects, acquired more partners, held international conferences, being track chairs at many more conferences, and edited special issues of scientific journals. Moreover, its competence in global development and planning as well as universal design makes it able to hold perspectives not shared by similar centres. Thus, CIEM is now firmly established in the international "crisis management" arena and its plans to engage with key international players to enhance its global impact are realistic.

The centre's future potential is thus very good. The centre is aware of several risks – it has a good "situational awareness" – and understands to be stakeholder-relevant and education-relevant besides developing disciplinary and inter-disciplinary discussions.

CIEM Response to the PRIFORSK Evaluation Results

We are very pleased with the overall positive evaluation and sincerely appreciate the reviewers' recognition of the Centre's scientific achievements and development. We are particularly encouraged by the acknowledgement of how the PRIFORSK allocation has enabled the Centre to build further on its strengths and broaden its scientific excellence and impact. We see this as an important recognition of the value of the Centre's strategic priorities and activities during the funding period.

We appreciate the reviewers' observations and recognize the importance of ensuring that CIEM continues to develop a strong and diversified funding portfolio. At the same time, we would emphasize the important enabling role of institutional support funding in the Centre's development.

We also welcome Pettersson's constructive observations on the organization of CIEM. We see these comments primarily as constructive suggestions for the next stage of CIEM's development, building an organizational model whose flexibility is positively recognized by Pettersson. The existing disciplinary composition has provided CIEM with a sufficiently coherent base and critical mass to build a strong interdisciplinary research environment. As acknowledged by the reviewer, the integration of social sciences and technology-oriented research through the collaboration between the respective Faculties provides a strategic advantage of CIEM.

At the same time, we agree that there is potential to broaden participation strategically by mapping complementary perspectives that can add value to CIEM's research agenda. In particular, disciplines such as health and nursing, communication, languages and translation, psychology, mathematics may provide important perspectives on crisis preparedness, societal security, and the interaction between people and technology. We therefore see the reviewer's suggestion as a useful opportunity to explore new interdisciplinary collaborations. Such expansion should, however, be driven by scientific complementarity and research relevance, while also contributing positively to the diversity of the Centre.

Regarding the observation about postdoctoral researchers mainly being recruited within information systems, we recognize the value of achieving a broader disciplinary distribution. The present composition partly reflects the development of CIEM's project portfolio, available funding opportunities, and the disciplines from which particular projects have emerged. As the Centre develops, increasing opportunities for postdoctoral researchers from a wider range of disciplines is a natural and desirable next step, particularly where this strengthens interdisciplinary research themes.

We particularly appreciate the reviewer's positive assessment of the new CIEM Joint Operations Room (Samvirkerommet). We concur that this facility has considerable potential to become an even stronger platform for connecting research, education, training and external collaboration, that can also become a national resource, as pointed out by Pettersson. Further development of this infrastructure can increase interaction with public sector, private sector and international partners and strengthen CIEM's capacity for simulation, training, experimentation, and evaluation. Similarly, the reviewer's recognition that researcher engagement in education is well developed confirms an important strength of the Centre: the close connection between research, research-based education and capacity building.

Pettersson's observation regarding the prerequisite for interdisciplinarity is especially important. Effective interdisciplinary collaboration requires time for researchers to work across departmental and disciplinary boundaries, develop joint ideas, establish common methods and terminology, build proposals, and create shared research activities. These activities are essential to CIEM's mission but are often difficult to finance through individual externally funded projects. A stable level of institutional support funding is therefore an important enabling mechanism for interdisciplinarity. It provides the dedicated time, coordination capacity, and continuity required to connect disciplines and subsequently develop larger externally funded research initiatives.

Moreover, the progress highlighted by Reviewer 2 (Peter Sheard) - including CIEM's maturation into a leading interdisciplinary research environment, the substantial expansion of PhD capacity, the development of new MSc programs, academic promotions, improved gender balance, and the strengthening of international networks - has been possible in part because support funding provides the continuity and flexibility required to build research capacity over time.

Such funding should therefore be seen not as a substitute for competitive external funding, but as a strategic foundation that enables CIEM to compete for external resources and to pursue longer-term interdisciplinary initiatives that cannot readily be sustained through short-term project funding alone, which can be captured from the following statement: "In total, all these efforts seem utterly unlikely to have occurred without the PRIFORSK allocation and the in-kind contributions by the faculties". The funding has supported activities such as research development, coordination across disciplines, early-stage development of new research areas, doctoral and researcher capacity building, international partnerships, and the preparation of major competitive proposals. This is particularly important given the reviewers' recognition that CIEM addresses areas of increasing strategic importance for Europe, including societal security, civil preparedness, emergency management, and digital resilience.

Forslag til vedtak:

Fakultetsstyret vedtar etableringen av forskningsgruppen «Philosophy and Organizational Theory in Information Systems Research (POTIS)».

Leif Skiftenes Flak

Hva saken gjelder

Det legges frem en sak for fakultetsstyret om etablering av en ny forskningsgruppe ved Fakultet for samfunnsvitenskap. Det vises til fakultetsstyresak «Kriterier for forskningsgrupper» og vedtak om at fakultetsstyret skal *etablere* forskningsgrupper, ref. sak 39/17 fra 1. november 2017.

Institutt for informasjonssystemer ønsker å etablere en ny forskningsgruppe ved navnet:

- *Philosophy and Organizational Theory in Information Systems Research (POTIS)*

Saksunderlag

UiA har siden 2013 vært organisert i forskningsgrupper, og kriteriene for forskningsgrupper ble vedtatt i 2017 av universitetsstyret. Det er etablert opp mot 100 ulike forskningsgrupper eller sentre med ulik størrelse, aktivitetsnivå og målsetning på UiA. Fakultet for samfunnsvitenskap har p.t. 21 aktive forskningsgrupper eller sentre fordelt på de fire instituttene. Fakultetet har så langt satt av strategiske midler til forskningsgruppenes aktiviteter hvert år. I 2026 satte fakultetsstyret av 300 000 kroner til dette formålet.

Forskningsgruppene skal være en god arena for forskning og bidra til vitenskapelig utvikling der medlemmer samles om et felles overordnet forskningstematisk område. De ulike gruppene har flere ulike funksjoner og målsetninger, og kan være en arena for felles aktiviteter, utvikling av prosjekter, formidling eller søknadsskriving. Alle ph.d. kandidatene ved fakultetet er tilknyttet en forskningsgruppe, som oftest den som deres veiledere er medlem av. For å bli profilert som forskningsgruppe på UiAs webside må gruppen vise til regelmessig publisering og fremdrift.

Forskningsgruppene er ulikt organisert, noen er særlig knyttet til et institutt, andre samarbeider på tvers av institutter, og noen har samarbeidspartnere/medlemmer utenfor fakultetet. De har også ulike typer aktiviteter og mål. Noen av gruppene fungerer som arena for flere eksternt finansierte prosjekter. Andre fungerer som et faglig felleskap for diskusjon og til utvikling av for eksempel journal artikler/special issues, bokprosjekter, eller annen publisering. Flere er faglige utviklingsarenaer gjennom organisering av seminar og workshop nasjonalt og internasjonalt. Samlet sett fungerer alle forskningsgrupper som en arena for å utvikle og styrke forskningskvalitet og forskningskultur ved fakultet. Likevel er det som oftest ikke forskningsgruppene som er drivere for å utvikle nye forskningssøknader, men enkeltindivider i en forskningsgruppe.

Hvert institutt har etablert flere forskningsgrupper hver

- Institutt for global utvikling og planlegging (IGUS) har etablert fem grupper.
- Institutt for informasjonssystemer (IIS) har fem aktive forskningsgrupper.
- Institutt for sosiologi og sosialt arbeid (ISS) har fem aktive grupper.
- Institutt for statsvitenskap og ledelse (ISL) har tre etablerte forskningsgrupper.

IIS er involvert i tre sentre: CIEM, CeDiT og Senter for eHelse. Alle tre sentrene ble i sin tid ledet fra IIS. I den senere tid har IIS blitt mindre sentrale i to av sentrene, noe som delvis forklarer behovet instituttet har for egne forskningsgrupper. CIEM ledes i dag fra IIS mens CeDiT og eHelse har sin ledelse ved andre institutt og fakultet. Alle sentrene er tverrfaglige og inkluderer forskere fra flere fagområder og ulike deler av UiA. Sentrene har også annen finansiering (kilde og størrelse) enn forskningsgruppene og konkurrerer ikke direkte om de samme midlene.

Nærmere beskrivelse av forskningsgrupper og -sentre finnes på

<https://www.uia.no/forskning/forskningsgrupper/sv/>

I kjølvannet av at det er blitt etablert flere nye grupper de siste par årene har det vært diskusjoner i både fakultetsstyret, ledermøte og i fakultetets forskning- og innovasjonsutvalg (FOI- SV) om forskningsgruppene. Det anføres at disse diskusjonene har vært basert på en forståelse av at IIS fortsatt leder tre sentre og man har, i hvert fall tilsynelatende behandlet sentre og forskningsgrupper som én homogen mengde. Dette kan ha skapt et inntrykk av at IIS har langt flere forskningsgrupper enn de andre miljøene ved fakultetet, mens realiteten er at gruppene fordeler seg nokså likt på tvers av instituttene.

Fakultetet har mottatt en søknad fra fagmiljøet ved Institutt for informasjonssystemer om å etablere en ny forskningsgruppe (POTIS). Instituttet har per i dag fem forskningsgrupper.

POTIS adresserer tematikk som er sentral for fagfeltet informasjonssystemer og relevant for mange ved instituttet. Tematikken hører ikke til noen av de andre forskningsgruppene. Det er et sterkt fagmiljø som står bak etableringen av den nye gruppen, hvorav fire av de er nylig ansatt på instituttet.

Forskningsgruppen svarer til kriteriene for å etablere en gruppe og etableringen støttes av institutt for informasjonssystemer. Viser til vedlagte notater for mer utfyllende informasjon om gruppens deltagere og plan for aktiviteter de neste to til tre årene.

Økonomiske konsekvenser:

Fakultetet har satt av 300 000 pr. år til formålet. Ved etablering av flere grupper blir det mindre midler å fordele ut til hver forskningsgruppe. Gruppene har ulike behov for økonomisk støtte, og støtte tildeles individuelt hvert år basert på søknad. Fakultetet vil vurdere om det er behov for å øke avsetningen til forskningsgruppene i strategisk budsjett for 2027.

Saksnr:

Kopi Cecilie Rygh Mawdsley
til:**Ønske om å opprette POTIS som forskningsgruppe ved institutt for Informasjonssystemer**

På vegne av IIS ønsker jeg å fremme en sak for fakultetstyret om opprettelse av en forskningsgruppe med tittelen: **Philosophy and Organizational Theory in Information Systems Research (POTIS)**. POTIS adresserer tematikk som er helt sentrale innen vårt fagfelt, samtidig som ny teknologi og KI endrer dette området i et hurtig tempo. Tematikken er relevant for de aller fleste ved vårt institutt, og vil også ha relevans utover IIS, for eksempel for CeDiT, senter for eHelse og prosjektene knyttet KI og kreative prosesser ledet av fakultet for kunsthøgskolen.

Forskerne som er inkludert i denne forskningsgruppen er en blanding av etablerte forskere som er internasjonalt anerkjente innen sine fagfelt, og mindre etablerte (og yngre) forskere med stort potensial. Gruppen har også knyttet til seg eksterne medlemmer med viktig kompetanse som er godt kjent med arbeidet vårt her på UiA. En slik gruppe vil ha alle forutsetninger for å være med å sette dagsorden innen fagfeltet og har alle forutsetninger for å utgjøre en arena for å utvikle større forskningsprosjekter som vil bidra til å oppnå målsetningene ved instituttet og fakultetet. Etter min mening oppfyller gruppen alle de kriterier UiA for opprettelse av forskningsgrupper:

<https://www.uia.no/intranett/arbeidsstotte/forskningsstotte/regelverk-og-rutiner/kriterier-for-forskningsgrupper.html>.

Instituttet har de senere år opprettet flere nye forskningsgrupper, og det har tidligere blitt stilt spørsmål ved behovet for mange grupper innen et institutt. Vi har for øvrig også lagt ned grupper hvor det har vært lite aktivitet. Det er flere grunner til at vi ønsker å opprette POTIS. For det første er dette en gruppe som er mer orientert mot fagfeltets akademiske disiplin enn mot ulike anvendelsesområder, noe som er tilfellet med flere av de andre gruppene. For det andre er det et sterkt fagmiljø som står bak som fokuserer på en tematikk som ikke naturlig hører hjemme i de andre forskningsgruppene. For det tredje er vi et miljø i vekst hvor de aller fleste er forskningsaktive. Eksempelvis er fire av de navngitte medlemmene i POTIS ansatt hos oss de siste 13 månedene. Vi rekrutterer stadig nye kollegaer som med ny kompetanse gir oss mulighet til å styrke vår posisjon i ulike retninger.

Et alternativ kunne vært å legge ned eksisterende grupper for å gi plass til å etablere en ny. Som nevnt har vi tidligere lagt ned grupper uten aktivitet, men gruppene vi nå har er alle aktive og bidrar positivt på ulike måter. I stikkordsform kan det nevnes:

- Human Centered AI har og har hatt ansvaret for flere store eksternt finansierte prosjekter som inkluderer 8 PhD kandidater,

- ICT4D gruppen har etablert viktige arena internt og eksternt for å diskutere forskning og har hatt ansvaret for et stort antall gjester til glede for hele instituttet. De har nettopp fått tilført en post -doc stilling og ansetter i disse dager en ny PhD kandidat.
- ReDigit er knyttet til et stort antall prosjekter i samarbeid med offentlig sektor (spesielt Nav) og vurderer å invitere inn andre aktører for å gjøre dette til en nasjonal forskningsgruppe. To post- doc kandidater og flere PhD kandidater vil bli her i nær fremtid.
- Cherish har et utstrakt internasjonalt samarbeid og har en søknad om å oppnå PriForsk status til vurdering. Lykkes de med en slik søknad vil det medføre en kraftig vekst i aktiviteten.

Det vil være svært demotiverende og lite hensiktsmessig å legge ned aktive grupper for å eventuelt opprette nye. På samme måte er det vanskelig å argumentere for at POTIS ikke skal kunne etableres, så lenge de klart oppfyller UiAs kriterier, har en veldig dedikert og kompetent gruppe medlemmer, fokuserer på tematikk som er sentrale innen vårt felt, og hvor jeg har en klar forventning om at en slik gruppe vil bidra til å sette UiA på kartet.

Jeg håper dekanen ønsker å fremme denne saken for fakultetsstyret.

Mvh

Øystein Sæbø

Instituttleder Institutt for informasjonssystemer

RESEARCH GROUP PROPOSAL

06.03.2026

P O T I S

Philosophy and Organizational Theory in Information Systems Research (POTIS)

Group Pls:

Professor Marko Niemimaa

Assoc. Professor Markus Zimmer

Members:

Professor Margunn Aanestad

Assoc. Professor Elina Niemimaa

PhD Candidate Kjetil Rustenberg

Assoc. Professor Wael Soliman

Professor Devinder Thapa

Researcher Pragyan Thapa

External members:

Assoc. Professor Jonna Järveläinen, University of Jyväskylä

Assist. Professor Matti Minkkinen, University of Turku

Research Group Description

Philosophy and Organizational Theory in Information Systems Research (POTIS) is a research group devoted to philosophically informed and theoretically ambitious research in Information Systems and Organizational Studies. Rather than organizing around specific application domains or technological trends, POTIS brings together scholars united by shared theoretical interests and a commitment to curiosity-driven inquiry.

POTIS serves as an intellectual meeting place and scholarly milieu that values openness, curiosity, and the permissiveness of philosophical and theoretical exploration—including

RESEARCH GROUP PROPOSAL

06.03.2026

ideas that may not fit comfortably within contemporary academic mainstreams. The group seeks to cultivate an environment in which risk-taking, creativity, nonconformity, and deep reflection are not only accepted but encouraged.

POTIS is ambitious and aims for high-quality publications and meaningful theoretical impact. However, we do not treat high-quality publications as an end in themselves. Rather, they are understood as outcomes—and indicators—of a healthy scholarly milieu that fosters intellectual vitality, innovation, and sustained theoretical engagement.

Our research may have implications for practice. As Kurt Lewin famously observed, “Nothing is as practical as a good theory”. In this spirit, POTIS explicitly resists narrow instrumentalism and the growing pressure within academia to equate scholarly value with immediate practical relevance. While not opposed to practice, we maintain that careful thinking, conceptual experimentation, and theoretical depth are indispensable to meaningful scholarship. Intellectual difficulty, reflexivity, and disagreement are viewed not as obstacles, but as generative conditions for research.

The group welcomes work drawing on diverse philosophical and theoretical traditions, including but not limited to classical and contemporary, analytic and continental, critical and interpretive. At the same time, POTIS does not confine itself to philosophy as a formal academic discipline. It draws broadly on philosophical and theoretical ideas, including those emerging outside the traditional canon, wherever they offer resources for thinking differently about information systems and organizing.

The group organizes workshops and events that function as developmental forums for research ideas and manuscripts. At the same time, POTIS embraces the broader spirit of the *agora* by providing a space for open academic dialogue, critical debate, and collective reflection on philosophy, organization theory, and the conditions of scholarly inquiry itself. The aim of the group is to invite the thematically-focused research groups to join this space engaging in scholarly discussions, cross-fertilising research activities.

Long-term plan

Activities	Performance indicators
Develop POTIS to a European hub for scholarly debate enhancing visibility through conference tracks, publications (including special issues, commentaries and debates) in leading conferences or journals. For instance, in European Conference for Information Systems, IFIP 8.2, SCIS/IRIS.	One POTIS-related track, panel discussion, affiliated event, or special issue, commentary or debate contribution every second year
Hosting POTIS events at UiA to strengthen Philosophy and Organizational Theory across departments and faculties	One event at UiA every second year

RESEARCH GROUP PROPOSAL

06.03.2026

Establish a periodic seminar and scientific/theory development workshops for POTIS members.	• Two seminars/research development workshops every year
Networking with international researchers in the domain.	• Host one guest researcher every year.
Organise social events around Philosophy and Organizational Theory in Information Systems Research (movie nights, thematic discussions)	• One event every second month
Apply for NFR grants within the Scheme for National Researcher Schools (or similar)	• Submit an application within three years after establishing POTIS
Promote and facilitate members' intellectual and theoretical/philosophical development and growth	• Yearly membership survey on POTIS impact

Utv.saksnr	Utvalg	Møtedato
25/26	Fakultetsstyret for Fakultet for samfunnsvitenskap	22.09.2026

Forslag til vedtak:

Fakultetsstyret tar saken til orientering.

Leif Skiftenes Flak

Hva saken gjelder

Saken er en orientering om søker- og opptakstill til fakultetets studier høsten 2026, antall aktive studenter ved fakultetet og studieplasser til neste års opptak, 2027/2028.

Saksunderlag

Fakultetet hadde 816 studieplasser til ordinære studier i høstens opptak. Det er en økning på 100 studieplasser til det nye årsstudiet i Ansvarlig digitalisering med oppstart høsten 2026.

Opptaket til års- og bachelorstudier og 5-årig master foregår gjennom Samordna opptak, mens 2-årige masterprogram og internasjonalt opptak foregår gjennom lokalt opptak ved UiA. Fristen for å registrere seg som student er 1. september.

Per 7. september er det 880 nye startende studenter ved fakultetet, en økning på 117 studenter fra fjoråret (2025: 763). Tabellen under viser tallene for de ulike studieprogrammene.

Studieprogramnavn	Studie- plasser	Søkere	1.prisøkere	1.prisøker pr. studie plass	Kvalifiserte 1.pri	Tilbud (hovedopptak)	Tilbud (totalt)	Svart ja	Registrert	Antall tilbud pr. student	Oppfyltings- grad
Ansvarlig digitalisering, årsstudium	816	8 436	2 868	3,6	2 188	1 324	1 979	1 056	880	2,2	95 %
IT og informasjonssystemer, årsstudium	100	1 857	638	6,4	618	270	273	191	155	1,8	155 %
Sosiologi, årsstudium	37	342	54	1,5	52	88	88	42	33	2,7	89 %
Statsvitenskap, årsstudium	35	444	40	1,1	39	90	90	50	41	2,2	117 %
Globale utviklingsstudier, årsstudium	35	391	37	1,1	34	80	83	40	34	2,4	97 %
IT og informasjonssystemer, bachelorprogram	25	343	50	2,0	36	49	85	30	25	3,4	100 %
Samfunnsplanlegging og kommunikasjon, bachelorprogram	115	807	196	1,7	178	220	220	135	113	1,9	98 %
Sosialt arbeid, bachelorprogram	35	337	26	0,7	24	52	94	42	40	2,4	114 %
Sosiologi, bachelorprogram	75	1 524	364	4,9	340	115	124	88	81	1,5	108 %
Statsvitenskap, bachelorprogram	50	605	48	1,0	45	100	100	56	48	2,1	96 %

Figur 1 Søker- og opptakstall per studieprogram

I tillegg til tallene i tabellen, er det 32 nye studenter som har fått studie plass i innpassingsopptaket, dvs. studenter som har et årsstudium fra før og søker seg inn på 2. året i et bachelorprogram.

Samordna opptak

Figuren under viser tallene for 1. prioritetssøkere frem til registrert student i Samordna opptak og utviklingen de siste fem årene.

Figur 2 Samordna opptak

Den store økningen i 1. prioritetssøkere og nye startende studenter skyldes høye søkertall til det nye årsstudiet i *Ansvarlig digitalisering* med 638 søkere. Dette studiet og *Bachelor i sosialt arbeid* ligger på henholdsvis andre og tredjeplass over program med flest 1. prioritetssøkere per studie plass ved UiA.

For de andre studiene i Samordna opptak, er det en nedgang i søkere til flere av årsstudiene, mens det ellers er forholdsvis stabile tall.

48,3 % av de som fikk tilbud om studieplass i Samordna opptak begynte på et studieprogram ved fakultetet, en liten nedgang fra i fjor. Dette tallet har variert mellom 47-50 % de siste fem årene.

På grunnstudiene treffer antall startende studenter godt med antall studieplasser i de fleste program, som vist i figuren under.

Figur 3 Oppfylgingsgrad per studieprogram (Antall studieplasser – tallet til høyre / Antall nye studenter – tallet til venstre)

For det nye digitale årsstudiet i *Ansvarlig digitalisering* var det knyttet spenning til søker- og opptakstallene. Digitale studier har gjerne høyt frafall i tilbuds- og opptaksprosessen og høyt frafall underveis i studiet. Det ble derfor tatt høyde for det, og det ble sendt ut 273 tilbud til 100 studieplasser i hovedopptaket. Omtrent det antallet instituttet hadde planlagt for, 155 studenter, begynte på studiet. Det er budsjettert med 100 studenter som tar eksamen i høstens emner.

Oversikten over hvor studentene er rekruttert fra viser en spredning fra hele landet, med høyest andel fra Oslo og Akershus med 44,5 % og Agder på tredjeplass med 12,3 %. Aldersspredningen viser høyest andel studenter mellom 25-29 år, og få studenter med førstegangsvitnemål. Kvinneandelen er 63 %, noe som er svært positivt i et fagområde som ellers rekrutterer få kvinnelige studenter. Samtidig har de andre IT-studiene ved fakultetet opprettholdt gode søkertall og god rekruttering. Man har med andre ord klart å nå nye studentgrupper med det nye studietilbudet.

2026							
19-24	25-29	30-34	35-39	40-44	45-49	50-54	55-59
29	86	15	11	8	2	2	2

Figur 4 Aldersspredning Ansvarlig digitalisering

Master i barnevern gjennomgikk programevaluering i fjor. I den forbindelse ble det vurdert å dele programmet i to, bachelor og master, på grunn av bortfall av masterkravet for ansatte i barnevernet. Det ble besluttet å fortsette med 5-årig master, men samtidig følge søker- og opptakstallene nøye fremover. Søkertallene gikk noe ned i år, men holder seg fortsatt høyt med 2,2 1. prioritetsøkere per plass og 46 nye startende studenter, hvorav 5 menn, til 35 studieplasser.

Lokalt opptak – masterprogram og internasjonale studenter

I det lokale opptaket var det en økning i antall 1. prioritetsøkere, men en nedgang i antall nye startende studenter som vist i figur 6. Økningen i søkertall kan forklares med en økning i internasjonale søkere til de engelskspråklige studiene som fra høsten 2026 har fått en betydelig lavere skolepengesats. Ser vi bort fra de internasjonale søkerne, er søkertallene forholdsvis stabile.

Fakultetet tar opp internasjonale studenter til årsstudiet og bachelorstudiet i *Global Development Studies* og til masterprogrammene i *Global Development*, *Crisis and Change* og *Cybersecurity Management*. 28 studenter ble rekruttert gjennom det internasjonale opptaket, hvorav 19 til bachelorprogrammet i *Global Development Studies*.

Tre StAR-studenter (Students at Risk) har fått studieplass ved fakultetet i høst.

Det er vanskelig å få oversikt over hvor mange studenter som er rekruttert fra EU/EØS til masterstudiene, da disse søker som ordinære studenter sammen med norske søkere.

Figur 5 Lokalt opptak

Det har vært en nedgang i nye startende studenter til flere masterprogram i år, og flere program fyller dermed ikke studie plassene (se figur 1 og 3). Dette gjelder *Master i sosiologi*, *Master i sosialt arbeid* og *Master i statsvitenskap og ledelse*. Lavest studenttall har *Master i sosiologi* med 13 studenter.

Begge masterprogrammene ved IGUS hadde få startende studenter i fjor, men fyller i år studie plassene.

Master i statsvitenskap og ledelse hadde gode søkertall og fikk mange ja-svar i hovedopptaket i mai, men flere enn normalt trakk seg i løpet av sommeren, og mange som hadde takket ja møtte ikke til studiestart. Det gjør dimensjonering av opptaket vanskelig. Det er vanskelig å vite hva som er årsaken til nedgangen i år. Det ble sendt ut mange ekstra tilbud i august, men det er svært få studenter som takker ja til studie plass i suppleringsopptaket så sent. Det betyr at det bør sendes ut flere tilbud i mai i hovedopptaket og heller risikere å få litt for mange studenter. Antall studenter som begynner på studiene henger nøye sammen med instituttets budsjett. En såpass stor nedgang i startende studenter (19 i 2026, 35 i 2025) vil derfor merkes på instituttet fremover.

Oversikten under viser fordeling av antall studieplasser ved de fire instituttene og antall startende studenter.

Figur 6 Antall studieplasser og antall startende studenter på instituttene (Samordna opptak og Lokalt opptak)

Kjønnsbalanse – nye startende studenter

Figur 5 viser økningen i antall studenter de siste fem årene og kjønnsfordelingen samlet på fakultetets studier. Økningen de tre siste årene er nesten utelukkende kvinnelige studenter, mens antall menn er stabilt. Dersom fakultetets søknad om kjønnskvote på 25 % menn i *Master i barnevern* og *Bachelor i sosialt arbeid* godkjennes av departementet, vil dette bli gjeldende fra opptaket i 2027.

Nye startende studenter

Figur 7 Kjønnsbalanse – nye startende studenter

EVU – opptakstall

Det er registrert 125 nye studenter på *Master i ledelse* i 2026 fordelt på to opptak høst og vår, og tilsvarende 25 på *Master i digitalisering*. Totalt på alle studietilbud på EVU hittil i år (program og mindre kurstilbud), har det begynt 229 studenter. Dette tallet vil øke med oppstart av tilbud og kurs i høst.

Antall aktive studenter

Høsten 2026 er det ved UiA per 7. september registrert totalt 14 393 aktive studenter, hvor 12 801 er ordinære studenter og 1 592 er EVU-studenter.

Ved fakultetet er det nå 2 565 studenter, hvor 2 039 er ordinære studenter og 526 er EVU-studenter. Økningen er først og fremst kommet gjennom økning av antall studieplasser i enkelte program og oppstart av nye studier. EVU-tallene vil antakelig øke noe utover høsten.

Figur 8 Antall ordinære studenter ved fakultetet de siste fem årene (eks. EVU)

Planlagt studentopptak høsten 2027/2028

Fakultetet melder inn planlagt studentopptak innen 25. september for studieåret 2027/2028.

På bakgrunn av årets søker- og opptakstall, er vurderingen at det ikke er grunn til å gjøre store endringer. I samråd med instituttlederne vil fakultetet melde inn studenttall for neste års opptak og eventuelt gjøre mindre justeringer ved behov.

Det er planlagt en økning i studenttallet i årsstudiet i Ansvarlig digitalisering. Her vil det gjøres en vurdering av erfaringer så langt, før en bestemmer nivået på neste års studentopptak.

Saksfremlegg

Dato: 14.09.2026

Utlysningstekster for to faste 100 % stillinger som førsteamanuensis i sosiologi ved Institutt for sosiologi og sosialt arbeid

Arkivsak: 26/19348-1
 Saksansvarlig: Leif Skiftenes Flak
 Saksbehandler: Anna Cecilie Eye Færavaag

Utv.saksnr	Utvalg	Møtedato
	Fakultetsstyret for Fakultet for samfunnsvitenskap	22.09.2026

Forslag til vedtak:

1. Utlysningstekst «1» for en fast 100 % stilling som førsteamanuensis i sosiologi ved Institutt for sosiologi og sosialt arbeid godkjennes
2. Utlysningstekst «2» for en fast 100 % stilling som førsteamanuensis i sosiologi ved Institutt for sosiologi og sosialt arbeid godkjennes

Leif Skiftenes Flak

Hva saken gjelder

Institutt for sosiologi og sosialt arbeid (ISS) har behov for å ansette i to faste 100 % stillinger i sosiologi. Bakgrunnen for behovet er at en fast ansatt førsteamanuensis i sosiologi har sagt opp stillingen sin ved instituttet med virkning 1.juli 2026, samt at det forventes en naturlig avgang (overgang til pensjon) i 2027 for en av instituttets faste ansatte sosiologer. Foruten å sikre tilstrekkelig bemanning vil en slik rekruttering gi mulighet for å videreutvikle sosiologimiljøets faglige profil med ambisjon om ytterligere å styrke et robust og forskningsaktivt fagmiljø med høy kvalitet i undervisning og veiledning, økt deltakelse i eksternt finansierte forskningsprosjekter og videre utvikling av nasjonale og internasjonale faglige nettverk.

Stillingene lyses ut i form av to separate utlysningstekster med ulike kvalifikasjonskrav. I den ene stillingen (Utlysningstekst «1») er det vektlagt en bredere sosiologisk profil med mål om å rekruttere en faglig sterk kandidat som kan kompletterer eksisterende kompetanse, og som kan bidra til videreutvikling av forsknings- og undervisningsmiljøet. I den andre stillingen (Utlysningstekst «2») er kvantitativ metode tillagt vekt, da instituttet har behov for å styrke denne kompetansen knyttet til metodeundervisningen, studentveiledningen og utviklingen av instituttets forskningsaktivitet.

Stilling «1» lyses kun ut på norsk for å sikre tilstrekkelig kapasitet til undervisning og veiledning på norsk/ skandinavisk allerede ved ansettelsestidspunktet. Stilling «2» lyses ut både på norsk og engelsk, med krav om opparbeidelse av norsk på nivå B2 innen tre år, for å nå en bredere internasjonal søkermasse.

Sosiologimiljøet ved ISS består i dag av en stor andel professorer. For å gi instituttet mulighet til å rekruttere medarbeidere med potensial for å utvikle sterke forskningsprofiler, bidra i eksterne søknader og over tid kvalifisere seg videre faglig lyses stillingene ut på førsteamanuensisnivå.

Økonomien for rekruttering av to faste 100 % stillinger er avklart med fakultetets Controller, Nina K. Bang.

Det vises til vedlagte saksdokumenter.

En fast stilling som førsteamanuensis i sosiologi ved Fakultet for samfunnsvitenskap

Ved Universitetet i Agder, Fakultet for samfunnsvitenskap er det ledig en fast 100 % stilling som førsteamanuensis i sosiologi. Stillingen er lokalisert ved Campus Kristiansand. Tiltredelse etter avtale med fakultetet.

Fakultet for samfunnsvitenskap har fire institutter: Institutt for global utvikling og samfunnsplanlegging, Institutt for informasjonssystemer, Institutt for statsvitenskap og ledelsesfag og Institutt for sosiologi og sosialt arbeid. For mer informasjon om fakultetet, se [her](#).

Institutt for sosiologi og sosialt arbeid (ISS) tilbyr studier i sosiologi, sosialt arbeid og barnevern på bachelor-, master- og ph.d.-nivå og bidrar i tillegg med undervisning på barnehage- og lærerutdanningene. Instituttet er i stadig vekst med økende fokus på internasjonalisering og utvikling av forskningsprosjekter og undervisning. For mer informasjon om instituttet, se [her](#).

Arbeidsoppgaver

Arbeidsoppgavene tilknyttet stillingen omfatter undervisning i sosiologi på bachelor-, master og ph.d.-nivå og veiledning av studenter på studieprogrammene i sosiologi og på andre studieprogrammer på instituttet. Aktuelle kandidater forventes å bidra til utvikling av fagmiljøet og undervisning i fellesskap med andre kollegaer. I tillegg vil utvikling av eget forskningsfelt samt deltagelse i søknad om eksterne midler være del av arbeidsoppgavene. Den som ansettes vil bli tilknyttet en av fakultetets forskergrupper. For mer informasjon om fakultetets forskningsgrupper, se [her](#).

Det er også muligheter for å utvikle egne kurs basert på faglig kompetanse. Den som ansettes forventes å bidra til å videreutvikle et robust, faglig sterkt og sosialt ivaretagende fag- og arbeidsmiljø og delta i forskningsgrupper på fakultetet.

Nødvendige kvalifikasjoner

- doktorgrad i sosiologi eller nært beslektet fagfelt
- undervisningserfaring fra universitets- og høgskolesektoren
- gode pedagogiske ferdigheter
- erfaring med å gjennomføre vitenskapelig forskning, fullføre akademiske prosjekter og skrive og publisere akademiske tekster
- norskferdigheter, skriftlig og muntlig, på minimum nivå B2 ved ansettelsestidspunktet. Språkkompetanse i svensk eller dansk likestilles med norsk
- gode engelskkunnskaper, muntlig og skriftlig

Se UiAs kvalifikasjonskrav for ansettelse i stilling som [førsteamanuensis](#).

Ønskede kvalifikasjoner

- erfaring med veiledning av studenter på BA- og MA-nivå

- forsknings-, formidlings- og publiseringserfaring fra eget fagfelt
- erfaring med søknadsprosesser for ekstern finansiering
- erfaring fra samarbeid om forskning, undervisning og veiledning
- erfaring fra nettverksbygging med samfunns- og forskningsmiljøer

Personlige egenskaper

- engasjert i akademisk kvalitet, originalitet og grundighet
- i stand til å arbeide både selvstendig og som del av et team
- god til å kommunisere
- fleksibel og åpen for nye ideer
- interessert i faglig diskusjon og undervisning
- motivasjon for å bidra til et godt fag-, arbeids- og sosialt miljø

Personlige egenskaper og egnethet for stillingen vil bli vektlagt.

Vi tilbyr

- faglig utvikling i en stor, spennende og samfunnsmessig viktig organisasjon
- et positivt, inkluderende, åpent og mangfoldig arbeidsmiljø
- moderne fasiliteter og et omfattende velferdstilbud
- medlemskap i [Statens pensjonskasse](#).

Stillingen lønnes etter Statens lønnsregulativ, lønnsplan 17.510, kode 1011 førsteamanuensis, kr 780 000 – 850 000 brutto pr år. For spesielt kvalifiserte søkere kan høyere lønn vurderes. Fra lønnen går det lovfestet innskudd til Statens pensjonskasse. [Mer om UiA som arbeidsplass](#).

Generell informasjon

UiA er et åpent og inkluderende universitet. Vi mener at mangfold beriker arbeidsplassen og gjør oss bedre. Vi oppfordrer derfor kvalifiserte kandidater til å søke på stillingen uavhengig av kjønn, alder, kulturell bakgrunn, funksjonsnedsettelse eller en ufullstendig CV.

Den som ansettes, har rettigheter og plikter etter de regler som til enhver tid gjelder for stillingen, og man må påregne endring i organisering og oppgaver. Ansettelse foretas av Ansettelsesutvalget for undervisnings- og forskningsstillinger ved Universitetet i Agder.

Aktuelle kandidater vil bli innkalt til intervju og prøveforelesning. Det vil bli innhentet referanser etter nærmere avtale med søkeren. Det kan bli foretatt [bakgrunnssjekk](#) for å verifisere opplysninger som kommer frem av tilgjengelige dokumenter. Bakgrunnssjekk skjer alltid med søkerens samtykke, og ansettelse i stillingen forutsetter godkjent bakgrunnssjekk. Aktuelle søkere vil motta nærmere informasjon om dette.

Den endelige innstillingen vil være en helhetsvurdering basert på sakkyndig vurdering, prøveforelesning, intervju, referanser og eventuell bakgrunnssjekk. Mer om [ansettelsesprosessen](#).

I henhold til offentlighetsloven § 25, 2. ledd kan søker be om ikke å bli oppført på den offentlige søkerlisten. Universitetet kan likevel beslutte at navnet på søkeren skal offentliggjøres. Søker vil bli varslet i forkant ved eventuell offentliggjøring.

Søknad

Søknad og nødvendig informasjon om utdanning og erfaring (inkludert vitnemål og attester) skal sendes elektronisk. Bruk lenken «Søk på stillingen».

Følgende dokumentasjon må lastes opp elektronisk:

- CV
- attester og vitnemål
- liste over publikasjoner
- vitenskapelige arbeider (inntil fem publikasjoner, ph.d.-avhandling regnes som tre publikasjoner)
- evt. dokumentasjon på utdanningsfaglig kompetanse
- evt. annen relevant dokumentasjon

Søker er selv ansvarlig for å levere komplett digital dokumentasjon innen fristen. All dokumentasjon må foreligge på et skandinavisk språk eller engelsk.

[UiAs kompetansevurderingsmatrise for undervisnings- og forskningsstillinger](#) kan være et nyttig verktøy i arbeidet med å dokumentere og reflektere over egen kompetanse i forhold til kriteriene.

Søknadsfrist: 15.11. 2026

Kontakt

Associate Professor in Sociology at the Faculty of Social Sciences

About the position

A permanent 100 % position is available at the University of Agder, Faculty of Social Sciences, as Associate Professor in Sociology, at the Department of Sociology and Social Work. The position is located at Campus Kristiansand. The starting date is negotiable with the faculty.

The Faculty of Social Sciences has four departments: the Department of Global Development and Planning, the Department of Information Systems, the Department of Political Science and Management, and the Department of Sociology and Social Work. For more information about the Faculty, see [here](#).

The Department of Sociology and Social Work (ISS) offers programmes in sociology, social work and child welfare at bachelor's, master's and PhD levels, and contributes to teaching in early childhood education and teacher education programmes. The Department is continuously growing, with an increasing focus on internationalisation and the development of research projects and teaching. For more information about the Department, see [here](#).

Responsibilities

The responsibilities associated with the position include teaching sociology at bachelor's, master's and PhD levels, as well as supervising students enrolled in the sociology programmes and other study programmes at the Department. The person appointed is expected to contribute to the development of the academic environment and to teaching in collaboration with colleagues.

The position also includes developing the candidate's own field of research and participating in applications for external research funding. The person appointed will be affiliated with one of the Faculty's research groups. For more information about the Faculty's research groups, see [here](#).

There will also be opportunities to develop courses based on the candidate's academic expertise. The successful candidate is expected to contribute to the further development of a robust, academically strong and supportive working and learning environment, and to participate actively in the Faculty's research groups.

Required qualifications

- PhD in sociology or a closely related field
- Strong and documented proficiency in quantitative methods
- Experience conducting research using quantitative approaches

- Teaching experience from the university and university college sector
- Strong pedagogical skills
- Experience conducting academic research, completing research projects, writing and publishing academic texts, and disseminating research within one's field
- Good English language skills, both written and spoken.

Qualification requirements for appointment [Associate professor](#) at the University of Agder.

The working language at the University of Agder is Norwegian. The successful candidate must be proficient in Norwegian on level B2, or another Scandinavian language.

For candidates who are not proficient in Norwegian, the University of Agder will facilitate the completion of courses in Norwegian. Permanently employed staff is expected to be proficient in Norwegian within three years.

Desired qualifications

- Experience supervising students at bachelor's and master's levels
- Experience from teaching quantitative methods
- Experience with applications for external funding
- Experience collaborating on research, teaching and supervision
- Experience building networks with relevant societal and research communities
- Proficiency in Norwegian or another Scandinavian language, both written and spoken

Personal qualities

- Committed to academic quality, originality and thoroughness
- Able to work both independently and as part of a team
- Strong communication skills
- Flexible and open to new ideas
- Interested in academic discussion and teaching
- Motivated to contribute to a positive academic, professional and social working environment

Personal qualities and suitability for the position will be given considerable weight.

We offer:

- A variety of responsibilities in a large, exciting and socially influential organisation
- A position with opportunities for development in a diverse environment
- Modern facilities and a comprehensive set of welfare offers
- Membership of the [Norwegian Public Service Pension Fund](#)

[More about working at UiA.](#)

The position is remunerated according to the State Salary Scale, salary plan 17.510, code 1011 Associate Professor, NOK 780 000 – 850 000 gross salary per year. Higher salary grades may be considered for particularly well-qualified applicants. A compulsory pension contribution to the Norwegian Public Service Pension Fund is deducted from the pay according to current statutory provisions.

General information

UiA is an open and inclusive university. We believe that diversity enriches the workplace and makes us better. We, therefore, encourage qualified candidates to apply for the position independent of gender, age, cultural background, disability or an incomplete CV.

The successful applicant will have rights and obligations in accordance with the current regulations for the position, and organizational changes and changes in the duties and responsibilities of the position must be expected. Appointment is made by the University of Agder's Appointments Committee for Teaching and Research Positions.

A [background check](#) may be conducted to verify information that appears in available documents. Background checks are always done with the applicant's consent, and employment in the position requires an approved background check. Relevant applicants will receive further information.

Short-listed applicants will be invited for interviews and a demonstration of their teaching competency, usually in the form of a trial lecture. With permission from the applicant the university also will conduct a reference check before appointment. The final recommendation will be an overall assessment based on the expert assessment, the trial lecture, the interview(s) and references. Read more about the [employment process](#).

In accordance with the Freedom of Information Act § 25 (2), applicants may request that they are not identified in the open list of applicants. The University, however, reserves the right to publish the names of applicants. Applicants will be advised of the University's intention to exercise this right.

In case of discrepancies between the Norwegian and the English version of this description, the Norwegian version takes precedence.

Application

The application and any necessary information about education and experience (including diplomas and certificates) are to be sent electronically. Use the link **"Apply for this job"**.

The following documentation must be uploaded electronically:

- CV
- Diplomas and certificates
- List of publications
- Scholarly works (up to five publications; the PhD thesis counts as three publications)
- If applicable, documentation of educational competence
- If applicable, other relevant documentation

The applicant is fully responsible for submitting complete digital documentation before the closing date. All documentation must be available in a Scandinavian language or English.

[The Competence Assessment Matrix for teaching and research positions at the University of Agder](#) can be a useful tool for documenting and reflecting on one's own competence in relation to the criteria.

Closing date: **15.11.2026**

En fast stilling som førsteamanuensis i sosiologi ved Fakultet for samfunnsvitenskap

Ved Universitetet i Agder, Fakultet for samfunnsvitenskap er det ledig en fast 100 % stilling som førsteamanuensis i sosiologi. Stillingen er lokalisert ved Campus Kristiansand. Tiltredelse etter avtale med fakultetet.

Fakultet for samfunnsvitenskap har fire institutter: Institutt for global utvikling og samfunnsplanlegging, Institutt for informasjonssystemer, Institutt for statsvitenskap og ledelsesfag og Institutt for sosiologi og sosialt arbeid. For mer informasjon om fakultetet, se [her](#).

Institutt for sosiologi og sosialt arbeid (ISS) tilbyr studier i sosiologi, sosialt arbeid og barnevern på bachelor-, master- og ph.d.-nivå og bidrar i tillegg med undervisning på barnehage- og lærerutdanningene. Instituttet er i stadig vekst med økende fokus på internasjonalisering og utvikling av forskningsprosjekter og undervisning. For mer informasjon om instituttet, se [her](#).

Arbeidsoppgaver

Arbeidsoppgavene tilknyttet stillingen omfatter undervisning i sosiologi på bachelor-, master og ph.d.- nivå og veiledning av studenter på studieprogrammene i sosiologi og på andre studieprogrammer på instituttet.

Aktuelle kandidater forventes å bidra til utvikling av fagmiljøet og undervisning i fellesskap med andre kollegaer. I tillegg vil utvikling av eget forskningsfelt samt deltagelse i søknad om eksterne midler være del av arbeidsoppgavene. Den som ansettes vil bli tilknyttet en av fakultetets forskergrupper. For mer informasjon om fakultetets forskningsgrupper, se [her](#).

Det er også muligheter for å utvikle egne kurs basert på faglig kompetanse. Den som ansettes forventes å bidra til å videreutvikle et robust, faglig sterkt og sosialt ivaretagende fag- og arbeidsmiljø og delta i forskningsgrupper på fakultetet.

Nødvendige kvalifikasjoner

- doktorgrad i sosiologi eller nært beslektet fagfelt
- dokumenterte kunnskaper og ferdigheter innen kvantitativ metode
- ha anvendt kvantitative metoder i egen forskning
- undervisningserfaring fra universitets- og høgskolesektoren
- gode pedagogiske ferdigheter
- erfaring med å gjennomføre vitenskapelig forskning, fullføre akademiske prosjekter, skrive og publisere akademiske tekster og å formidle fra eget fagfelt
- gode engelskkunnskaper, muntlig og skriftlig

Se UiAs kvalifikasjonskrav for ansettelse i stilling som [førsteamanuensis](#).

Arbeidsspråket ved Universitetet i Agder er norsk. Den som ansettes må ha norskferdigheter på nivå B2. Språkkompetanse i svensk eller dansk er likestilt med norsk.

Dersom den som ansettes ikke behersker norsk, vil Universitetet i Agder legge til rette for gjennomføring av norskkurs. Fast ansatte forventes å kunne norsk innen tre år.

Ønskede kvalifikasjoner

- erfaring med veiledning av studenter på BA- og MA-nivå
- erfaring med å undervise kvantitative metoder
- erfaring med søknadsprosesser for ekstern finansiering
- erfaring fra samarbeid om forskning, undervisning og veiledning
- erfaring fra nettverksbygging med samfunns- og forskningsmiljøer
- norsk eller annet skandinavisk språk, muntlig og skriftlig

Personlige egenskaper

- engasjert i akademisk kvalitet, originalitet og grundighet
- i stand til å arbeide både selvstendig og som del av et team
- god til å kommunisere
- fleksibel og åpen for nye ideer
- interessert i faglig diskusjon og undervisning
- motivasjon for å bidra til et godt fag-, arbeids- og sosialt miljø

Personlige egenskaper og egnethet for stillingen vil bli vektlagt.

Vi tilbyr

- faglig utvikling i en stor, spennende og samfunnsmessig viktig organisasjon
- et positivt, inkluderende, åpent og mangfoldig arbeidsmiljø
- moderne fasiliteter og et omfattende velferdstilbud
- medlemskap i [Statens pensjonskasse](#).

Stillingen lønnes etter Statens lønnsregulativ, lønnsplan 17.510, kode 1011 førsteamanuensis, kr 780 000 – 850 000 brutto pr år. For spesielt kvalifiserte søkere kan høyere lønn vurderes. Fra lønnen går det lovfestet innskudd til Statens pensjonskasse.

[Mer om UiA som arbeidsplass.](#)

Generell informasjon

UiA er et åpent og inkluderende universitet. Vi mener at mangfold beriker arbeidsplassen og gjør oss bedre. Vi oppfordrer derfor kvalifiserte kandidater til å søke på stillingen uavhengig av kjønn, alder, kulturell bakgrunn, funksjonsnedsettelse eller en ufullstendig CV.

Den som ansettes, har rettigheter og plikter etter de regler som til enhver tid gjelder for stillingen, og man må påregne endring i organisering og oppgaver. Ansettelse foretas av Ansettelsesutvalget for undervisnings- og forskningsstillinger ved Universitetet i Agder.

Aktuelle kandidater vil bli innkalt til intervju og prøveforelesning. Det vil bli innhentet referanser etter nærmere avtale med søkeren. Det kan bli foretatt [bakgrunnssjekk](#) for å verifisere opplysninger som kommer frem av tilgjengelige dokumenter. Bakgrunnssjekk skjer alltid med søkerens samtykke, og ansettelse i stillingen forutsetter godkjent bakgrunnssjekk. Aktuelle søkere vil motta nærmere informasjon om dette.

Den endelige innstillingen vil være en helhetsvurdering basert på sakkyndig vurdering, prøveforelesning, intervju, referanser og eventuell bakgrunnssjekk. Mer om [ansettelsesprosessen](#).

I henhold til offentlighetsloven § 25, 2. ledd kan søker be om ikke å bli oppført på den offentlige søkerlisten. Universitetet kan likevel beslutte at navnet på søkeren skal offentliggjøres. Søker vil bli varslet i forkant ved eventuell offentliggjøring.

Ved meningsforskjell mellom den norske og den engelske teksten, skal den norske teksten legges til grunn.

Søknad

Søknad og nødvendig informasjon om utdanning og erfaring (inkludert vitnemål og attester) skal sendes elektronisk. Bruk lenken «Søk på stillingen».

Følgende dokumentasjon må lastes opp elektronisk:

- CV
- attester og vitnemål
- liste over publikasjoner
- vitenskapelige arbeider (inntil fem publikasjoner, ph.d.-avhandling regnes som tre publikasjoner)
- evt. dokumentasjon på utdanningsfaglig kompetanse
- evt. annen relevant dokumentasjon

Søker er selv ansvarlig for å levere komplett digital dokumentasjon innen fristen. All dokumentasjon må foreligge på et skandinavisk språk eller engelsk.

[UiAs kompetansevurderingsmatrise for undervisnings- og forskningsstillinger](#) kan være et nyttig verktøy i arbeidet med å dokumentere og reflektere over egen kompetanse i forhold til kriteriene.

Søknadsfrist: **15.11. 2026**

Kontakt

Vennligst les utlysningen og bruk lenkene som er oppgitt for å finne svar på generelle spørsmål.

Behov for utlysning av to førsteamanuensisstillinger i sosiologi

Institutt for sosiologi og sosialt arbeid har behov for å lyse ut to faste 100 % stillinger som førsteamanuensis i sosiologi.

Bakgrunnen er at én fast vitenskapelig ansatt har fått stilling ved en annen institusjon og har fratrådt sin stilling ved UiA. I tillegg forventes naturlig avgang i fagmiljøet i løpet av 2027. Rekrutteringen er derfor nødvendig for å opprettholde tilstrekkelig bemanning og sikre kontinuitet i undervisning, veiledning og forskning. Behovet for stillingene er avklart med fakultetets Controller innenfor gjeldende økonomiske rammer.

Rekrutteringene gir samtidig mulighet til å videreutvikle sosiologimiljøets faglige profil. Instituttet har ambisjon om å styrke et robust og forskningsaktivt fagmiljø med høy kvalitet i undervisning og veiledning, økt deltakelse i eksternt finansierte forskningsprosjekter og videre utvikling av nasjonale og internasjonale faglige nettverk. De nye stillingene skal bidra aktivt til denne utviklingen.

Det er videre behov for å styrke kompetansen innen kvantitativ metode. Slik kompetanse er viktig både for metodeundervisningen, studentveiledningen og utviklingen av instituttets forskningsaktivitet, og foreslås derfor tillagt særskilt vekt i én av stillingene. Den andre stillingen foreslås utlyst med en bredere sosiologisk profil, slik at instituttet kan rekruttere en faglig sterk kandidat som kompletterer eksisterende kompetanse og bidrar til videre utvikling av forsknings- og undervisningsmiljøet.

Sosiologimiljøet har i dag en høy andel ansatte med professorkompetanse. Det vurderes derfor som strategisk hensiktsmessig å rekruttere på førsteamanuensisnivå. Dette vil bidra til en god langsiktig sammensetning av fagmiljøet, legge til rette for generasjonsskifte og gi instituttet mulighet til å rekruttere medarbeidere med potensial for å utvikle sterke forskningsprofiler, bidra i eksterne søknader og over tid kvalifisere seg videre faglig.

Det er også behov for å opprettholde tilstrekkelig kapasitet til undervisning og veiledning på norsk. For én av stillingene foreslås derfor krav om norsk/skandinavisk språkkompetanse ved tiltredelse, mens den andre følger krav om å opparbeide nødvendig norskkompetanse innen tre år.

Offentlig

Behovet for de to stillingene, kompetanseprofilene og utlysningstekstene er diskutert og forankret i fagmiljøet ved instituttet.

Vennlig hilsen

Irene Trysnes

Instituttleder, Institutt for sosiologi og sosialt arbeid

Saksfremlegg

Dato: 14.09.2026

Revidert budsjett 2026

Arkivsak: 26/19367-1

Forslag til vedtak:

Fordeling av tildeling i revidert budsjett tas til orientering.

Leif Skiftenes Flak

Hva saken gjelder:

I revidert budsjett fikk Fakultet for Samfunnsvitenskap økt sin ramme med 750 000,-
 Vedlegget viser fordelingen av denne.

Vedlegg:

Vedlegg: Revidert budsjett 2026

Revidert budsjett 2026

Fakultet for samfunnsvitenskap fikk i revidert budsjett for 2026 en økning i rammen på 750 000,-

Den totale rammen for året ender da på 166 201 339.

Tabell 1.2 - Totalramme for budsjettansvarsområdene

Budsjettansvarsområde	Rammeendring i revidert budsjett	2026 Endelig budsjett
Handelshøyskolen	-1	130 153 824
Fakultet for helse- og idrettsvitenskap	1 699 999	203 654 221
Fakultet for humaniora og pedagogikk	620 000	203 558 478
Fakultet for kunsthøgskolen	439 016	100 043 936
Fakultet for samfunnsvitenskap	750 000	166 201 339
Fakultet for teknologi og realfag	-116 297	285 223 415
Sum fakultetene	3 392 717	1 088 835 213
Avdeling for lærerutdanning	3 880 000	40 026 000
Felles administrasjon	22 805 000	376 812 710
Universitetsbiblioteket		47 781 766
Sum fellestjenestene	26 685 000	464 620 476
Styret inkl. strategiske avsetninger		131 713 000
Ledelsen	2 000 000	56 026 000
Sum styret/ledelsen	2 000 000	187 739 000
UIAs fullbudsjettete særkostnader	863 000	340 784 578
Ufordelt		-
Sum budsjettansvarsområdene	32 940 717	2 081 979 267

Økningen skyldes at fakultetet i våres avdekket at man i den ordinære tildelingen manglet basis for 5 stipendiater. Dette ble innmeldt og følgelig justert for i revidert budsjett.

Konsekvensen medfører økning i bevilgning for tre av fire institutt:

Fordeling revidert tildeling

Fordeling institutter		
IGUS	450 000	60,0 %
ISL	150 000	20,0 %
ISS	150 000	20,0 %
IIS	-	0,0 %

Midlene blir overført som tilskudd i den frie rammen i T2 og T3 og overføres i sin helhet uten fratrukk for administrasjonens del.

Kolonnene i rapporten, fra A10 til B50, viser hva vi hadde før regnskapsperioden (IB), bevilgning, regnskap (faktisk bruk), budsjett, avvik mellom budsjett og regnskap, budsjettert merforbruk og til slutt forventet utgående beholdning.

For første og siste kolonne, vil et positivt beløp bety at det er en positiv pengebeholdning ved starten eller slutten av året. For de resterende kolonnene gjelder motsatt, altså at negativt tall er bra/inntekt, mens positivt tall er mindre bra/kostnad.

Rapportgruppe A viser oss den ordinære rammen, og den vanlige driften.

Rapportgruppe B er strategiske satsninger og særbevilgninger, øremerket fra universitetsstyret, samt rekrutteringsstillinger. Er en del av rammen, men følges opp på egne prosjektnummer.

Rapportgruppe C til F er alle eksternt finansierte prosjekter.

Enhets frie ramme (A10-A15)

Vi ser fra den frie rammen at vi totalt sett har budsjettert med et mindreforbruk på rundt 900' i 2026.

Av disse 900' er 2,6 mill budsjettert mindreforbruk i ordinær ramme/instituttens drift, mens 1,8 er merforbruk relatert til EVU + SAKOM. Årsaken til det budsjetterte mindreforbruket i ordinær ramme, er i hovedsak at årets tildeling ble vesentlig høyere enn normalt. Institutt som tidligere år har gått med merforbruk, budsjetterer nå med mindreforbruk for å

balansere/planlegge for fremtidige forpliktelser. Årsaken til det budsjetterte merforbruket som primært gjelder SAKOM, henger sammen med at budsjettet viser lønnskostnadene, mens kostnadene i realiteten overføres til eksterne prosjekter.

Skal korrigere for dette i T2 slik at det er realiteten som ligger i budsjettet.

Beholdningen ved inngangen av året var på 13,3 mill og estimert UB pr. 20.05. er på 15 mill.

Pr. 1.tertial har fakultetet et samlet mindreforbruk på 0,8 mill i forhold til budsjett, og et samlet merforbruk på 3,6 mill i forhold til bevilgning.

Rappkls	Rappgrp	Inngående		Regnskap	Budsjett (kostnad)	Avvik (B-R)	Budsjettert	Estimert utgående
		beholdning	Bevilgning				merforbruk 2026	beholdning
A	A10 Ordinær ramme	0,00	-44 779 779,00	46 517 162,04	47 225 535,96	708 373,92	-2 687 149,39	3 395 523,31
	A15 Øremerkede midler av enheten, ekskl. KFU	13 313 094,36	0,00	1 906 384,97	2 043 007,46	136 622,49	1 817 479,77	11 632 237,08
A Totalt		13 313 094,36	-44 779 779,00	48 423 547,01	49 268 543,42	844 996,41	-869 669,62	15 027 760,39
Totalsum		13 313 094,36	-44 779 779,00	48 423 547,01	49 268 543,42	844 996,41	-869 669,62	15 027 760,39

Den totale frie rammen kan deles i to, ordinær ramme og prosjekter øremerkede av enheten, ekskl. KFU.

Ordinær ramme (A10)

I den ordinære rammen har fakultetet et mindreforbruk i T1 på ca. 700' i forhold til budsjett.

Regnskapet viser høyere inntekter enn budsjettert, samtidig som kostnadene samlet sett er noe lavere enn antatt. Inkludert i dette ligger et lite merforbruk knyttet til lønnskostnadene. Avviket her kan i stor grad forklares av en tidsforskyvning i internfaktureringen, ettersom interne timer bokføres etter avsluttet semester og ikke per tertial slik budsjettet legger til grunn. En økning i refusjoner knyttet til foreldrepenger og sykepenge, bidrar til at merforbruket knyttet til lønn ikke er større enn det er.

Tabellen under viser i hovedlinjer hva vi har brukt på ordinær drift:

Universitetets øremerkinger

I 2026 mottar fakultetet 9,8 millioner i strategiske tildelinger og 3,2 millioner i særkostnader. Nytt av året er at fakultetet i tillegg til særkostnadene til Senter for Likestilling og Kompetanseenheden for kjønns- og seksualitetsmangfold, også får tildelt midler til Bo- og reisestøtte for praksisstudenter.

Dette er midler som fra Universitetsstyret er øremerket formålet. De kan følgelig ikke benyttes til regulær drift.

Fakultetet hadde ved inngangen av 2026 ca. 14,1 millioner i ubrukte midler fra tidligere. Noen av tildelingene vil bli brukt opp i løpet av året, andre over lengre tid.

Man finner i T1 2026 et avvik i de strategiske tildelingene på ca. 0,66 mill. Mindreforbruket er i hovedsak knyttet periodiseringsdifferanser, og vil jevnnes ut i løpet av året.

Det planlegges for at hele årets tildeling vil bli brukt.

UNIVERSITETET I AGDER

POSTBOKS 422 4604 KRISTIANSAND
TELEFON 38 14 10 00 FAKS 38 14 10 01
ORG.NR 970 546 200 MVA post@uia.no www.uia.no

Konto for faglig utvikling (KFU)

Ved inngangen av året hadde Fakultet for Samfunnsvitenskap en avsetning på 27,6 millioner til KFU, og estimert UB ligger nå på 27,8 millioner. Disse pengene er knyttet til de vitenskapelige ansatte, og benyttes ihht. fastsatte regler.

I T1 er det satt av og tilført KFU-midler for ca. 1,5 mill, noe som gir en bruk lik 1,3 millioner.

Fakultetet jobber aktivt med planer for å få ned denne beholdningen i de kommende år.

Rekrutteringsstillinger

Ved inngangen til 2026 hadde fakultetet på rekrutteringsstillinger en inngående balanse på 22,6 millioner. Ifølge styrerapporten for T1 ligger vi an til en UB på 25,4 millioner ved utgangen av året.

Summen som budsjetteres hvert år korrelerer med det antall stipendiater som faktisk er ansatt.

Dersom vi er i etterkant eller forkant med ansettelse, vil det oppstå avvik.

Fakultet har vært sterkt forsinket med ansettelse, men i august/september 26 får vi oppstart av 8-10 stipendiater, noe som forhåpentligvis vil redusere beholdningen fremover.

Det er også holdt tilbake midler i tilfelle fakultetet skulle få tilslag på et Priforsk senter. Skjer ikke det, vil midlene fordeles og lyses ut.

Per 1. tertial ser vi et mindreforbruk på 0,5 millioner. Dette avviket kan knyttes til refusjoner av sykepengen, forsinkelser i ansettelse og/eller permisjoner.

Det etterstrebes å redusere de oppsparte midlene, blant annet med forskuttering av flere stipendiater.

Enhetens øremerkinger - rekrutteringsstillinger

Etter lengre perioder med mindreforbruk har fakultetet de siste årene satt av midler til egenfinansierte rekrutteringsstillinger.

Ved inngangen av året var det avsatt midler til fire rekrutteringsstillinger. Tre av de påbegynt og den fjerde i prosess.

I 2026 er det blitt avsatt ytterligere 1 million, til delfinansiering av en PostDoc ved IIS/CIEM.

Vedkommende er allerede ansatt.

Ekstern finansiert virksomhet

Tilførsel av interne midler/egeninnsats til et eksternt prosjekt vil redusere et fakultetets eksterne inntekter. Uttak av midler, typ utbytte eller andre kostnadsføringer vil øke de eksterne inntektene.

Pr. 1. tertial 2026 hadde vi en omsetning/bruk på 13,5 mill på eksterne prosjekter. Sammenlikner man med samme periode i 2025 ser man en kraftig reduksjon i de eksterne inntektene knyttet til både EU-prosjekter, NRF/RFF-prosjekter og eksternfinansierte EVU-prosjekter.

På EU kan droppet forklares med at man i 2026 har tatt en egeninnsats som burde vært ført i 2025. På NFR er porteføljen blitt mindre, og på EVU skyldes det høye tallet i fjor, utbytte og mer ajourførte regnskap. Tallet er nok også noe lavt i T1, da kostnader som følger semesteret først blir ført i T2. (Tidsforskyvinger)

På annen eksternfinansiert virksomhet ser man en markant økning i forhold til i fjor. Dette skyldes dels at det i 2025, i forbindelse med avslutningen av par større prosjekter tilhørende Senter For Likestilling, ble tilført interne midler tilsvarende 2,4 millioner. Tallet i fjor var derfor unormalt lavt, og ikke egentlig reelt. Justerer man for dette, ser man en økning på ca. 70% fra 2025 til 2026.

Ekstern finansiert virksomhet	Inntekter 2023	Inntekter 2024	Inntekter 2025	Inntekter 2026	% endring 25-26
EU-prosjekter	509	1 152	4 595	2 725	-40,7 %
NFR/RFF-prosjekter	1 979	2 611	3 091	1 978	-36,0 %
Eksternfinansierte EVU-prosjekter	3 439	3 522	8 346	3 221	-61,4 %
Annen eksternfinansiert virksomhet	1 949	7 565	944	5 628	496,2 %
	7 876,00	14 850,00	16 976,00	13 552,00	-20,2 %

De budsjetterte inntektene fra eksternfinansiert virksomhet har ikke vært presise nok tidligere år. Pr. T1 2026 er man mer eller mindre «spot on» på budsjett om man ser bort fra tilført egeninnsats på et EU-prosjektet og periodiseringsdifferanser på EVU.

Det etterstrebes å opprettholde nøyaktig budsjettering på eksterne prosjekter.

Orienteringssak

Dato: 15.09.2026

Orientering om etablering av tre nye EVU-emner - fullmaktssak

Arkivsak. 26/19431-1
Saksansvarlig: Leif Skiftenes Flak
Saksbehandler: Linda Hye

Utv.saksnr	Utvalg	Møtedato
9/26	Fakultetsstyret for Fakultet for samfunnsvitenskap	22.09.2026

Hva saken gjelder

Denne saken er en orientering om etablering av tre nye EVU- emner godkjent på fullmakt av dekan. Emnene tilhører Institutt for statsvitenskap og ledelsesfag og institutt for informasjonssystemer. Saksfremlegg og emnebeskrivelser er vedlagt.

Vedlegg:

Saksfremlegg godkjenning av nye emner, UA-komp;Emnebeskrivelse ORG9XX Ukrainas europeiske integrasjon;Emnebeskrivelse ORG9XX Ukrainas vei til EU-medlemskap;Saksfremlegg godkjenning av nytt emne_EVU;Emnebeskrivelse IS-930 Geografisk IT og KI i praksis

Saksfremlegg - godkjenning av nye EVU-emner

Forslag til vedtak:

Dekan godkjenner, gjennom delegert fullmakt fra fakultetsstyret, etablering av emnene *ORG9XX Ukrainas vei til EU-medlemskap (2.5 sp)*, og *ORG9XX Ukrainas europeiske integrasjon (2.5 sp)*.

Hva saken gjelder

Institutt for statsvitenskap og ledelsesfag fikk høst 2025 tildelt 1.8 millioner fra Direktoratet for høyere utdanning og kompetanse (HK-dir). Tildelingens formål er et kompetanseløft om Ukrainas europeiske fremtid, og innebærer blant annet utvikling av to etter- og videreutdanningsemner.

Emnene er kvalitetssikret av opptakskontor, eksamenskontor og studieadministrativ koordinator ved fakultet for samfunnsvitenskap.

Bakgrunn for etablering av emnene

Institutt for statsvitenskap og ledelsesfag har en sterk faglig profil innen Europastudier, og instituttet utvikler nå flere etter- og videreutdanningsemner innenfor dette fagområdet. De foreslåtte emner inngår i denne porteføljen.

Målgruppen er ansatte i offentlig, privat og frivillig sektor. Emnene skal tilbys vår 2027 og høst 2027.

Emneansvarlige er førsteamanuensis Anne Pintsch v/Institutt for statsvitenskap og ledelsesfag

Emnene finansieres i sin helhet av tildeling fra Direktoratet for høyere utdanning og kompetanse (HK-dir) og har ingen studieavgift.

Vedlegg:

Emnebeskrivelse og kvantifiseringsskjema i begge emner: *ORG9XX Ukrainas vei til EU-medlemskap (2.5 sp)*, og *ORG9XX Ukrainas europeiske integrasjon (2.5 sp)*.

ORG9XX Ukrainas europeiske integrasjon

- **2.5 studiepoeng– høst – ett semester – digitalt**

- **Inngår i studieprogram:**

EU kompetanse

- **Undervisningsspråk**

Engelsk

- **Forkunnskapskrav**

[Generell studiekompetanse](#) eller [realkompetanse](#).

For øvrig skjer opptak etter [forskrift om opptak til studier og emner ved Universitetet i Agder](#).

- **Anbefalte forkunnskaper**

Det anbefales gode kunnskaper i engelsk.

- **Læringsutbytte**

Etter fullført emne skal kandidaten ha følgende læringsutbytte definert i kunnskap, ferdigheter og generell kompetanse

Kunnskap

- ha kunnskap om hvordan Ukraina samarbeider med EU innen utvalgte politikkområder
- ha innsikt i konkrete EU-programmer og initiativer Ukraina deltar i
- ha forståelse for hvordan gradvis integrasjon skjer i praksis

Ferdigheter

- kan beskrive konkrete eksempler på samarbeid mellom EU og Ukraina
- kan forklare hvordan EU-programmer og initiativer bidrar til integrasjon
- kan identifisere sentrale muligheter og begrensninger i pågående samarbeid

Generell kompetanse

- kan reflektere over Ukrainas rolle i europeisk samarbeid i praksis
- kan formidle faglige problemstillinger knyttet til EU–Ukraina-relasjoner

▪ Innhold

Dette emnet gir en innføring i Ukrainas løpende samarbeid og integrasjon med den europeiske union, med vekt på hvordan integrasjon skjer i praksis før et eventuelt fullt medlemskap.

Ukraina er i økende grad knyttet til EU gjennom deltakelse i programmer, samarbeid og politiske initiativer. Emnet belyser hvordan dette samarbeidet foregår innen utvalgte områder som utdanning, digitalisering og sikkerhet, og hvordan det bidrar til gradvis tilpasning til EU.

Videre gir emnet innsikt i hvordan Ukraina får tilgang til deler av EUs systemer og markeder uten å være medlem, og hvilke muligheter og begrensninger dette innebærer.

En sentral del av emnet er også hvordan Ukrainas gjenoppbygging henger sammen med samarbeidet med EU. Det legges vekt på hvordan støtte, reformer og institusjonsutvikling er knyttet til landets europeiske integrasjon.

Emnet gir et praksisnært perspektiv på forholdet mellom EU og Ukraina, og gjør deltakerne i stand til å forstå aktuelle utviklingstrekk i Europa.

▪ Undervisnings- og læringsformer

Undervisningen er nettbasert og blir gitt som digitale samlinger med forelesninger, fellesarbeider og oppfølging mellom samlingene. I forelesningene vil det bli lagt vekt på dialog mellom studentene. Det legges opp til aktiv deltakelse fra studentene.

Totalt forventet arbeidsomfang er om lag 67,5 timer.

▪ Vilkår for å gå opp til eksamen

Obligatorisk arbeidskrav må være godkjent for å gå opp til eksamen. Nærmere informasjon gis i Canvas.

▪ Eksamen

48 timers individuell hjemmееksamen. Vurderingsuttrykk: Bestått / ikke bestått.

- **Studentevaluering**

Emneevaluering gjennomføres som sluttevaluering i tråd med kvalitetssikringssystemet kapittel 4.1., dersom ikke andre opplysninger gis ved semesterstart.

- **Tilbys som enkeltemne**

Ja. Tilbys som videreutdanning

- **Opptakskrav for enkeltemnestudenter**

[Generell studiekompetanse](#) eller [realkompetanse](#)

- **Åpent for privatister**

Nei

- **Ansvarlig fakultet**

Fakultet for samfunnsvitenskap

- **Inngår i studieprogram**

EU kompetanse

- **Undervisningsspråk**

Engelsk

- **Forkunnskapskrav**

[Generell studiekompetanse](#) eller [realkompetanse](#).

For øvrig skjer opptak etter [forskrift om opptak til studier og emner ved Universitetet i Agder](#).

- **Anbefalte forkunnskaper**

Det anbefales gode kunnskaper i engelsk.

- **Læringsutbytte**

Etter fullført emne skal kandidaten ha følgende læringsutbytte definert i kunnskap, ferdigheter og generell kompetanse

Kunnskap

- har grunnleggende kunnskap om EUs utvidelsesprosess og sentrale integrasjonsmodeller
- har innsikt i Ukrainas status som kandidatland og veien mot medlemskap
- har kjennskap til prinsipper for tilgang til EUs indre marked før fullt medlemskap

Ferdigheter

- kan forklare hovedtrekk i EUs utvidelsesprosess
- kan sammenligne ulike integrasjonsmodeller
- kan identifisere sentrale utfordringer i Ukrainas medlemskapsprosess

Generell kompetanse

- kan reflektere over sentrale sider ved EU-utvidelse
- kan formidle grunnleggende problemstillinger knyttet til Ukrainas vei mot EU

▪ Innhold

EU-medlemskap er for Ukraina et grunnleggende politisk og sivilisatorisk valg. Landet har hatt status som kandidatland siden 2022, og til tross for forventninger om en rask tiltredelsesprosess, er veien mot medlemskap kompleks og preget av betydelige politiske, økonomiske og institusjonelle utfordringer.

Emne gir innføring i, og forståelse av, Ukrainas tilnærming til EU. Studentene vil få innsikt EUs tiltredelsesprosess, og setter Ukrainas posisjon inn i en bredere europeisk kontekst. Videre tar emnet for seg utviklingen av Ukrainas europeiske orientering, samt forståelse av hvordan historiske og politiske faktorer har formet landets nåværende situasjon. Her er Ukrainas nåværende status i medlemskapsprosessen, samt vurdering av hvilke utfordringer og muligheter som preger veien videre et sentralt spørsmål. Emnet tematiserer også hvordan den offentlige oppfatningen i Ukraina og i EUs medlemsstater påvirker integrasjonsprosessen, og hvilken rolle sivilsamfunnet spiller i denne sammenhengen.

Undervisnings- og læringsformer

Undervisningen er nettbasert og blir gitt som digitale samlinger med forelesninger, fellesarbeider og oppfølging mellom samlingene. I forelesningene vil det bli lagt vekt på dialog mellom studentene. Det legges opp til aktiv deltakelse fra studentene.

Totalt forventet arbeidsomfang er om lag 67,5 timer.

Saksfremlegg - godkjenning av nyt EVU-emne

Forslag til vedtak:

Dekan godkjenner, gjennom delegert fullmakt fra fakultetsstyret, etablering av emne: *IS-9XX Geografisk IT og KI i praksis (2,5 sp)*

Hva saken gjelder

IS-9XX Geografisk IT og KI i praksis (2,5 sp) er et emne på bachelornivå og opptakskravet er generell studiekompetanse eller realkompetanse med minst to års yrkespraksis. Målgruppen er yrkesaktive som til daglig arbeider med geografisk informasjonsteknologi (GIS).

Emne vil gi en grunnleggende introduksjon til de viktigste nasjonale og internasjonale datakildene – fra NorgeDigitalt, GeoNorge og SSB til OpenStreetMap og Overture Maps – og forstå hva disse kan brukes til. Det gir kjennskap til hvilke teknologier og verktøy som finnes, og hva som skiller dem fra hverandre, samt ferdighet til å anvende KI-verktøy for å utforske geografiske problemstillinger.

Emne har planlagt oppstart høst 2026. Emneansvarlig er førsteamanuensis Alexander Salveson Nossun, Institutt for informasjonssystemer.

Bakgrunn for etablering av emnene

Institutt for informasjonssystemer tilbyr allerede emne innenfor geografiske informasjonssystemer (GIS) i sine ordinære studier. GIS er et voksende tema som er veldig relevant, også for praksisfeltet.

Økonomiske konsekvenser av etableringen

Emne vil være et betalingsstudium, og finansieres av studieavgift pålydende 3500 kroner.

Grunnet usikkerhet rundt markeds sensitivitet på hhv. pris og etterspørsel er det meldt inn sikring i underskuddsgarantiordningen (50 % sentralt), samt foretatt en avsetning pålydende 100 000 kr på EVU utviklingsmidler.

Vedlegg:

Vedlegg 1: Studieplan for *IS-9XX Geografisk IT og KI i praksis (2,5 sp)* og Skjema for kvantifisering av arbeidsomfang

IS-930 Geografisk IT og KI i praksis

- **2.5 studiepoeng– høst – ett semester**

- **Inngår i studieprogram:**

Ingen

- **Undervisningsspråk**

Norsk

- **Forkunnskapskrav**

[Generell studiekompetanse](#) eller [realkompetanse](#) med minst to års yrkespraksis

For øvrig skjer opptak etter [forskrift om opptak til studier og emner ved Universitetet i Agder](#).

- **Anbefalte forkunnskaper**

Grunnleggende databruk. Kjennskap til KI-verktøy

- **Læringsutbytte**

Etter fullført emne skal kandidaten ha følgende læringsutbytte definert i kunnskap, ferdigheter og generell kompetanse

Kunnskap

- Kjenne til sentrale begreper, standarder og prinsipper innen geografisk informasjonsteknologi og geomatikk
- Kjenne til nasjonale og internasjonale datakilder for vektordata, herunder GeoNorge, Norge digitalt, SSB, OpenStreetMap og Overture Maps
- Kjenne til vanlige formater, projeksjoner og lagringsstrukturer for geodata
- Kjenne til relevante verktøy, biblioteker og API-tjenester for geografisk databehandling og visualisering
- Ha kunnskap om hvordan KI-agenter og -teknikker kan anvendes på geografiske problemstillinger

Ferdigheter

- Kunne identifisere relevante datasett og teknologier for en gitt problemstilling i egen virksomhet
- Kunne bruke KI-verktøy effektivt til geografiske problemstillinger ved hjelp av presise instruksjoner basert på faglig domeneforståelse
- Kunne vurdere kvaliteten og rimeligheten av svar og analyser produsert av KI-verktøy innen geografisk IT
- Kunne utarbeide en skisse og kravspesifikasjon for et geografisk IT-prosjekt
- Kunne kommunisere om geografisk IT med fagpersoner, leverandører og dataeiere

Generell kompetanse

- Ha tilstrekkelig oversikt til å initiere, bestille og følge opp et geografisk IT- eller KI-prosjekt i egen organisasjon
- Forstå mulighetsrommet og begrensningene ved bruk av KI-verktøy på geografiske data og problemstillinger

▪ Innhold

Hvor mange boliger ligger innenfor 15 minutters gange fra bussholdeplass? Er det geografiske sammenhenger på butikker sin omsetning i regionen din? Hvordan lage en app for innsamling av informasjon fra publikum med stedsinformasjon? Hvordan fordeler naturdata seg i din kommune? Hva om du kunne bruke kunstig intelligens og geografisk teknologi til å lage denne type analyser og presentere i interaktive kartvisualiseringer?

Geografiske data er overalt – i privat næringsliv, offentlig forvaltning og i forbrukerteknologi. Likevel er kompetansen til å forstå, bruke og vurdere geografisk informasjonsteknologi fremdeles lite utbredt.

I dette kurset vil du lære hva geodata er og hvorfor det er annerledes enn andre data. Du vil bli kjent med de viktigste nasjonale og internasjonale datakildene – fra NorgeDigitalt, GeoNorge og SSB til OpenStreetMap og Overture Maps – og forstå hva disse kan brukes til. Du vil lære hvilke teknologier og verktøy som finnes, og hva som skiller dem fra hverandre. Gjennom kurset vil du lære å bruke KI-verktøy for å utforske geografiske problemstillinger – med nok faglig tyngde til å vite når svaret du får er riktig, og når det ikke er det.

Emnet gir en bred oversikt over geografisk informasjonsteknologi og anvendelse av kunstig intelligens på geografiske data. Undervisningen er eksempelbasert og gjennomgangspreget og skal etter kurset ha nok faglig grunnlag til å forstå mulighetsrommet, stille gode spørsmål og ta kvalifiserte beslutninger i geografiske IT-prosjekter.

Et gjennomgående tema i alle moduler er bruk av KI-verktøy som hjelpemiddel: til å utforske datasett, formulere analyser og vurdere teknologivalg og kvalitet. Målet er at studentene bygger nok faglig grunnforståelse til å bruke disse verktøyene *effektivt og kritisk* – og til å oppdage når resultater er feil eller misvisende. Fokus er på geografiske vektordata og åpne, tilgjengelige ressurser.

▪ **Undervisnings- og læringsformer**

Undervisningen gis som digitale samlinger. Samlingene er forelesnings- og gjennomgangsbaserte med diskusjon, demonstrasjoner og eksempelgjennomganger. I forelesningene vil det bli lagt vekt på dialog mellom studentene. Det legges opp til aktiv deltakelse fra studentene. Totalt forventet arbeidsomfang er om lag 67,5 timer.

▪ **Vilkår for å gå opp til eksamen**

Obligatoriske arbeidskrav må være godkjent for å gå opp til eksamen. Nærmere informasjon gis i Canvas.

▪ **Eksamen**

Mappeeksamen med individuell gradert karakter. Vurderingsuttrykk: Bestått / ikke bestått. Det gis ikke utsatt eksamen i emnet.

▪ **Studentevaluering**

Emneevaluering gjennomføres som sluttevaluering i tråd med kvalitetssikringssystemet kapittel 4.1., dersom ikke andre opplysninger gis ved semesterstart.

▪ **Tilbys som enkeltemne**

Ja. Tilbys som videreutdanning
